KATAHDIN ANALYTICAL SERVICES, LLC
METALS ANALYSIS RUN INFORMATION SHEET

INSTR. ID: L (Agilent 7800) **ANALYST**: KS **ANALYSIS DATE**: 03/28/23

METHOD: **ICP-MS**
- ☑ 200.8
- ☑ 6020
- ☑ DOD

FILE NAME: LQC28E

Reviewed By: EA 033023

The pHs of all samples that were tested by direct analysis in this analytical run were checked just prior to analysis and confirmed to be <2. The time of preservation of these samples was checked in the "Measured Turbidity and Preservation of Incoming Samples" logbook to verify that they had been preserved at least 16 hours prior to analysis. These verifications were performed by _____ (initials) on _____ (date).

STANDARDS USED:

Standard Name	Standard ID	Prep Date	Expiration Date	Standard Conc.
Cal Blk/ICB/CCB	MW21411	03/02/23	03/02/24	0 ug/L
Cal Std	MW21445	03/27/23	05/31/23	Varies by Element
ICV	MW21429	03/15/23	06/14/23	Varies by Element
PQL	MW21447	03/27/23	05/31/23	Varies by Element
LRS1	MW21454	03/28/23	05/31/23	Varies by Element
LRS2	MW21450	03/27/23	05/31/23	Varies by Element
ICSA	MW21441	03/24/23	03/31/23	Varies by Element
ICSAB	MW21448	03/27/23	04/03/23	Varies by Element
CCV	MW21455	03/28/23	05/31/23	Varies by Element
Internal Standard (ISTD)	N/A	N/A	N/A	0.2 mg/L (Li,Sc,Ge/Y,Tb,Bi)

Additional Comments and Notes:

Samples with ISTD RSDs > 8% were reanalyzed immediately.

ISTD was manually added to all standards and samples (0.08 mL of MS2459 to 8 mL).

Dilutions: Some samples were diluted based on history or due to interfering element concentrations.

Dilution preparations are as follows:

5x diln.: 1.6 mL of sample (pipet M30) + 6.4 mL of MW21411 (pipet M31)

10x diln.: 0.8 mL of sample (pipet M19) + 7.2 mL of MW21411 (pipet M31)

25x diln.: 0.32 mL of sample(pipet M19) + 7.68 mL of MW21411 (pipet M31)

Post Spike: 0.08 mL of MW21329 (pipet M27) into 8 mL final volume of appropriately diluted sample (pipet M31)

KATAHDIN ANALYTICAL SERVICES, LLC
METALS ANALYSIS RUN INFORMATION SHEET

INSTR. ID: L (Agilent 7800) **ANALYST**: EAM **ANALYSIS DATE**: 03/29/23

METHOD: **ICP-MS**
- ☑ 200.8
- ☐ 6020
- ☑ DOD

FILE NAME: LQC29A

Reviewed By: KS 3/30/23

The pHs of all samples that were tested by direct analysis in this analytical run were checked just prior to analysis and confirmed to be <2. The time of preservation of these samples was checked in the "Measured Turbidity and Preservation of Incoming Samples" logbook to verify that they had been preserved at least 16 hours prior to analysis. These verifications were performed by _____ (initials) on _____ (date).

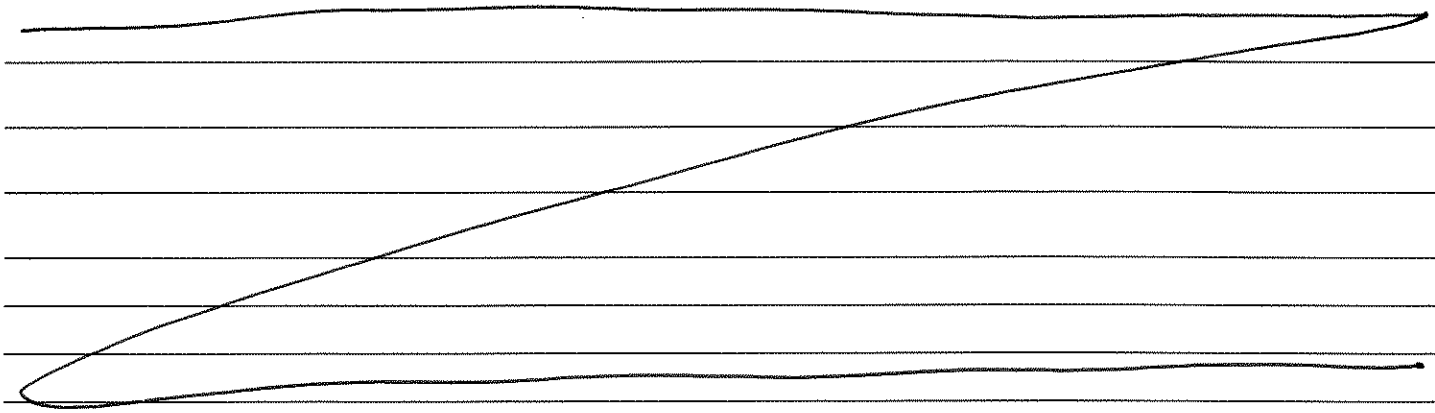
STANDARDS USED:

Standard Name	Standard ID	Prep Date	Expiration Date	Standard Conc.
Cal Blk/ICB/CCB	MW21411	03/02/23	03/02/24	0 ug/L
Cal Std	MW21445	03/27/23	05/31/23	Varies by Element
ICV	MW21429	03/15/23	06/14/23	Varies by Element
PQL	MW21447	03/27/23	05/31/23	Varies by Element
LRS1	MW21454	03/28/23	05/31/23	Varies by Element
LRS2	MW21450	03/27/23	05/31/23	Varies by Element
ICSA	MW21441	03/24/23	03/31/23	Varies by Element
ICSAB	MW21448	03/27/23	04/03/23	Varies by Element
CCV	MW21455	03/28/23	05/31/23	Varies by Element
Internal Standard (ISTD)	N/A	N/A	N/A	0.2 mg/L (Li,Sc,Ge/Y,Tb,Bi)

Additional Comments and Notes:

Samples with ISTD RSDs > 8% were reanalyzed immediately.

ISTD was manually added to all standards and samples (0.08 mL of MS2459 to 8 mL).



Dilutions: Some samples were diluted based on history or due to interfering element concentrations.

Dilution preparations are as follows:

5x diln.: 1.6 mL of sample (pipet M30) + 6.4 mL of MW21411 (pipet M31)

10x diln.: 0.8 mL of sample (pipet M19) + 7.2 mL of MW21411 (pipet M31)

25x diln.: 0.32 mL of sample(pipet M19) + 7.68 mL of MW21411 (pipet M31)

Post Spike: 0.08 mL of MW21329 (pipet M27) into 8 mL final volume of appropriately diluted sample (pipet M31)

KATAHDIN ANALYTICAL SERVICES, LLC
METALS ANALYSIS RUN INFORMATION SHEET

INSTR. ID: L (Agilent 7800) **ANALYST**: EAM **ANALYSIS DATE**: 03/30/23

METHOD: **ICP-MS**
- ☐ 200.8
- ☑ 6020
- ☑ DOD

FILE NAME: LQC30A

Reviewed By: KS 4/6/23

The pHs of all samples that were tested by direct analysis in this analytical run were checked just prior to analysis and confirmed to be <2. The time of preservation of these samples was checked in the "Measured Turbidity and Preservation of Incoming Samples" logbook to verify that they had been preserved at least 16 hours prior to analysis. These verifications were performed by ——— (initials) on ——— (date).

STANDARDS USED:

Standard Name	Standard ID	Prep Date	Expiration Date	Standard Conc.
Cal Blk/ICB/CCB	MW21411	03/02/23	03/02/24	0 ug/L
Cal Std	MW21445	03/27/23	05/31/23	Varies by Element
ICV	MW21429	03/15/23	06/14/23	Varies by Element
PQL	MW21447	03/27/23	05/31/23	Varies by Element
LRS1	MW21454	03/28/23	05/31/23	Varies by Element
LRS2	MW21450	03/27/23	05/31/23	Varies by Element
ICSA	MW21441	03/24/23	03/31/23	Varies by Element
ICSAB	MW21448	03/27/23	04/03/23	Varies by Element
CCV	MW21455	03/28/23	05/31/23	Varies by Element
Internal Standard (ISTD)	N/A	N/A	N/A	0.2 mg/L (Li,Sc,Ge/Y,Tb,Bi)

Additional Comments and Notes:

Samples with ISTD RSDs > 8% were reanalyzed immediately.

ISTD was manually added to all standards and samples (0.08 mL of MS2459 to 8 mL).

Dilutions: Some samples were diluted based on history or due to interfering element concentrations.

Dilution preparations are as follows:

5x diln.: 1.6 mL of sample (pipet M30) + 6.4 mL of MW21411 (pipet M31)

10x diln.: 0.8 mL of sample (pipet M19) + 7.2 mL of MW21411 (pipet M31)

25x diln.: 0.32 mL of sample(pipet M19) + 7.68 mL of MW21411 (pipet M31)

Post Spike: 0.08 mL of MW21329 (pipet M27) into 8 mL final volume of appropriately diluted sample (pipet M31)

Sample Data Section

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 Please refer to cover letter or narrative for further information.

H_ Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

JOB DESCRIPTION

Fort Jackson

JOB NUMBER

280-173651-1

Eurofins Denver
4955 Yarrow Street
Arvada CO 80002

See page two for job notes and contact information.

myEOL

Eurofins Denver

Job Notes

The test results in this report relate only to the samples in this report and meet all requirements of NELAC, with any exceptions noted. Pursuant to NELAP, this report shall not be reproduced except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the Eurofins TestAmerica Denver Project Manager.

The Lab Certification ID# is 4025.

Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Qualifiers

LCMS

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

CASE NARRATIVE

Client: Katahdin Analytical Services

Project: Fort Jackson

Report Number: 280-173651-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 3/16/2023 11:05 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.7º C.

PERCHLORATE

Samples SWDUP (280-173651-1), JACKSON-SWMC3-DC-01 (280-173651-2), JACKSON-SWMC2-DC-01 (280-173651-3), JACKSON-SWJC1-DC-01 (280-173651-4), JACKSON-SWMC1-DC-01 (280-173651-5), JACKSON-SWCC3-DC-01 (280-173651-6), JACKSON-SWCC4-DC-01 (280-173651-7), JACKSON-SWCC2-DC-01 (280-173651-8), JACKSON-EB-01 (280-173651-9) and JACKSON-CB-01 (280-173651-10) were analyzed for Perchlorate in accordance with SW 846 6850. The samples were analyzed on 03/22/2023.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

* The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
* Purified acids, 18.2 megohm deionized water, calibrated Class A glassware and the highest purity raw materials are used in the preparation of all standards.
* All standard containers are meticulously cleaned prior to use.
* Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
* Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
* All standards should be stored with caps tight and under appropriate laboratory conditions.
* Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressin the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, D.C. (1994).

Certificate of Analysis

Product Name: (Isotopic Label & Enrichment Specification)	PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) 100 UG/ML IN WATER
Lot Number:	SDIH-016
Catalog Number:	OLM-7310-S

Product Information

Chemical Purity Specification:	≥98%
MW*: *For isotopically labeled compounds, MW listed is for the fully enriched product.	130.44
Labeled CAS Number:	NA
Unlabeled CAS Number:	7601-89-0
Chemical Formula:	NaCl*O4
Storage:	Store at room temperature away from light and moisture.
Stability:	See storage and expiration date.
Intended Use:	For Research Use Only. Not for use in diagnostic procedures.

$NaCl^{18}O_4$

Certification

Cambridge Isotope Laboratories, Inc. guarantees that this material meets or exceeds the specifications stated. Absolute identity as well as chemical and isotopic purities are assured by the use of unambiguous synthetic routes and multiple chemical analyses whenever possible. Results are representative of QC testing at time of release from Quality Control unless otherwise stated. CIL Certificates of Analysis are occasionally updated with new data following recertification. We recommend checking the website for the latest version.

Volumetric measurements were made with Class A glassware. Gravimetry is traceable to the NIST through calibrated balances and certified, calibrated, standard weights. The calibrations are traceable to the NIST under Test No. 822/270236-04. The calibrations also meet specifications outlined in ISO 9001, ISO/IEC 17025, ANSI/NSCL Z540-1-1994, NCR Document 10CFR50 Appendix B, and applicable subdocuments.

This COA references the bulk catalog number before packaging. The COA also applies to the CIL finished good catalog number . Some possible packaging sizes and their corresponding suffix are -1.2, -1, -0.5, -10, or -0.1.

PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) 100 UG/ML IN WATER

Safety Data Sheet

according to Regulation (EC) No. 453/2010 and according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

Date of issue: 25/02/2014 Revision date: 10/02/2016 Supersedes: 25/02/2014 Version: 2.0

OLM-7310-S

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1. Product identifier

Product form : Mixtures

Product name : PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) 100 UG/ML IN WATER

Product code : OLM-7310-S

1.2. Relevant identified uses of the substance or mixture and uses advised against

1.2.1. Relevant identified uses

Industrial/Professional use spec : Industrial.
For professional use only.

1.2.2. Uses advised against

No additional information available

1.3. Details of the supplier of the safety data sheet

Cambridge Isotope Laboratories, Inc.
50 Frontage Road
Andover, MA 01810
USA

USA: 1-800-322-1174 Int: 1-978-749-8000
cilsales@isotope.com www.isotope.com

Emergency telephone number

Emergency numbers:

Chemtrec: 1-800-424-9300 (24 hours)
International: 1-703-741-5970 (24 hours)

SECTION 2: Hazards identification

2.1. Classification of the substance or mixture

Classification according to Regulation (EC) No. 1272/2008 [CLP]

Not classified

Classification according to Directive 67/548/EEC or 1999/45/EC

O; R8
O; R9

Full text of R-phrases: see section 16

Classification (GHS-US)

Not classified

Adverse physicochemical, human health and environmental effects

No additional information available

2.2. Label elements

Labeling according to Regulation (EC) No. 1272/2008 [CLP]

No labeling applicable

GHS-US labeling

No labeling applicable

2.3. Other hazards

No additional information available

SECTION 3: Composition/information on ingredients

3.1. Substances

Not applicable

3.2. Mixtures

Name	Product identifier	%	Classification according to Directive 67/548/EEC
WATER UNLABELED	(CAS No) 7732-18-5 (EC no) 231-791-2	99.99	Not classified
PERCHLORIC ACID, SODIUM SALT (18O4, 90%+)	(CAS No) 7601-89-0 (Unlabeled) (EC no) 231-511-9 (EC index no) 017-010-00-6	0.01	O; R8 O; R9 Xn; R22

Name	Product identifier	%	Classification according to Regulation (EC) No. 1272/2008 [CLP]
WATER UNLABELED	(CAS No) 7732-18-5 (EC no) 231-791-2	99.99	Not classified
PERCHLORIC ACID, SODIUM SALT (18O4, 90%+)	(CAS No) 7601-89-0 (Unlabeled) (EC no) 231-511-9 (EC index no) 017-010-00-6	0.01	Ox. Sol. 1, H271 Acute Tox. 4 (Oral), H302

Full text of R-, H- and EUH-phrases: see section 16

SECTION 4: First aid measures

4.1. Description of first aid measures

First-aid measures after inhalation : If not breathing give artificial respiration.

First-aid measures after ingestion : Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

4.2. Most important symptoms and effects, both acute and delayed

No additional information available

4.3. Indication of any immediate medical attention and special treatment needed

No additional information available

SECTION 5: Firefighting measures

5.1. Extinguishing media

suitable extinguishing media : Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.

5.2. Special hazards arising from the substance or mixture

Reactivity : Not available.

5.3. Advice for firefighters

Firefighting instructions : The product itself does not burn.

Protection during firefighting : Do not enter fire area without proper protective equipment, including respiratory protection.

SECTION 6: Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

6.1.1. For non-emergency personnel

No additional information available

6.1.2. For emergency responders

No additional information available

6.2. Environmental precautions

Prevent entry to sewers and public waters.

6.3. Methods and material for containment and cleaning up

For containment : Wipe up with absorbent material (e.g. cloth, fleece).

6.4. Reference to other sections

No additional information available

SECTION 7: Handling and storage

7.1. Precautions for safe handling

Hygiene measures : Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday.

7.2. Conditions for safe storage, including any incompatibilities

Storage conditions : Store at room temperature away from light and moisture.

7.3. Specific end use(s)

No additional information available

SECTION 8: Exposure controls/personal protection

8.1. Control parameters

No additional information available

8.2. Exposure controls

Personal protective equipment : Safety glasses. Gloves. Protective clothing. Respiratory protection of the dependent type.

Hand protection : Wear suitable protective clothing and gloves.

Eye protection : Wear safety glasses with side shields (or goggles) and a face shield.

Skin and body protection : Choose body protection according to the amount and concentration of the dangerous substance at the work place.

Respiratory protection : When appropriate, use NIOSH/CEN approved respirator.

SECTION 9: Physical and chemical properties

9.1. Information on basic physical and chemical properties

The properties listed below are for the solvent, the main component of this mixture.

Physical state	: Liquid
Appearance	: Liquid.
Molecular mass	: 18.02 g/mol
Color	: Colourless.
Odor	: No data available.
Odor threshold	: No data available
pH	: 6.0 - 8.0 at 25 °C (77 °F)
Relative evaporation rate (butyl acetate=1)	: No data available
Melting point	: 0.0 °C (32.0 °F)
Freezing point	: No data available
Boiling point	: 100.0 °C (212.0 °F)
Flash point	: No data available
Self ignition temperature	: No data available
Decomposition temperature	: No data available
Flammability (solid, gas)	: No data available
Vapor pressure	: No data available
Relative vapor density at 20 °C	: No data available
Relative density	: No data available
Density	: 1 g/ml at 20 °C (68 °F)
Solubility	: Water: Completely miscible
Log Pow	: No data available
Log Kow	: No data available
Viscosity, kinematic	: No data available
Viscosity, dynamic	: No data available
Explosive properties	: No data available
Oxidizing properties	: No data available
Explosive limits	: No data available

9.2. Other information

No additional information available

SECTION 10: Stability and reactivity

10.1. Reactivity

Not available.

10.2. Chemical stability

See storage and expiration date on CoA.

10.3. Possibility of hazardous reactions

No additional information available

10.4. Conditions to avoid

Not available.

10.5. Incompatible materials

No data available.

10.6. Hazardous decomposition products

No data available.

SECTION 11: Toxicological information

11.1. Information on toxicological effects

Acute toxicity : Not classified

PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) 100 UG/ML IN WATER	
LD50 oral rat	> 90000 mg/kg

WATER UNLABELED (7732-18-5)	
LD50 oral rat	> 90000 mg/kg

PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) (7601-89-0 (Unlabeled))	
ATE (oral)	500.000 mg/kg body weight

Skin corrosion/irritation : Not classified
No data available
pH: 6.0 - 8.0 at 25 °C (77 °F)

Serious eye damage/irritation : Not classified
No data available
pH: 6.0 - 8.0 at 25 °C (77 °F)

Respiratory or skin sensitization : Not available
No data available

Germ cell mutagenicity : Not available

Carcinogenicity : Not classified

Reproductive toxicity : Not available

Specific target organ toxicity (single exposure) : Not classified
No data available

Specific target organ toxicity (repeated exposure) : Not classified
No data available

Aspiration hazard : Not classified

Potential Adverse human health effects and symptoms : To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

SECTION 12: Ecological information

12.1. Toxicity

No additional information available

12.2. Persistence and degradability

PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) (7601-89-0 (Unlabeled))	
Persistence and degradability	Not available.

12.3. Bioaccumulative potential

PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) (7601-89-0 (Unlabeled))	
Bioaccumulative potential	Not available.

12.4. Mobility in soil

PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) (7601-89-0 (Unlabeled))	
Ecology - soil	Not available.

12.5. Results of PBT and vPvB assessment

No additional information available

12.6. Other adverse effects

No additional information available

SECTION 13: Disposal considerations

13.1. Waste treatment methods

Regional legislation (waste) : Waste materials should be disposed of under conditions which meet Federal, State, and Local environmental control regulations.

Waste disposal recommendations : Dispose in a safe manner in accordance with local/national regulations.

SECTION 14: Transport information

In accordance with ADR / RID / ADNR / IMDG / ICAO / IATA

14.1. UN number

Not applicable

14.2. UN proper shipping name

Not applicable

14.3. Additional information

Other information : No supplementary information available.

Special transport precautions : Not dangerous goods.

Overland transport

No additional information available

Transport by sea

No additional information available

Air transport

No additional information available

14.4. Environmental hazards

Other information : No supplementary information available.

14.5. Special precautions for user

Special transport precautions : Not dangerous goods.

14.6. Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code

Not applicable

SECTION 15: Regulatory information

15.1. US Federal regulations

No additional information available

15.2. International regulations

CANADA

PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) 100 UG/ML IN WATER
Listed on the Canadian DSL (Domestic Substances List) inventory.

15.2.1. National regulations

No additional information available

15.3. US State regulations

PERCHLORIC ACID, SODIUM SALT (18O4, 90%+) 100 UG/ML IN WATER()	
State or local regulations	U.S. - Pennsylvania - RTK (Right to Know) List U.S. - New Jersey - Right to Know Hazardous Substance List This product does not contain any chemicals known to State of California to cause cancer, birth defects, or any other reproductive harm.

SECTION 16: Other information

Other information : This product is not radioactive. The data given for this product are those of the corresponding unlabeled compound, unless specifically indicated otherwise. Health and safety data for labeled compounds are generally not available, but are assumed to be similar or identical to the corresponding unlabeled compound.

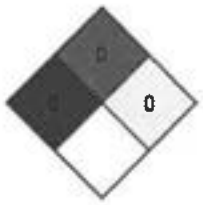
Full text of R-, H- and EUH-phrases::

Acute Tox. 4 (Oral)	Acute toxicity (oral) Category 4
Ox. Sol. 1	Oxidizing solids Category 1
H271	May cause fire or explosion; strong oxidiser
H302	Harmful if swallowed
R22	Harmful if swallowed
R8	Contact with combustible material may cause fire
R9	Explosive when mixed with combustible material
O	Oxidizing
Xn	Harmful

NFPA health hazard : 0 - Exposure under fire conditions would offer no hazard beyond that of ordinary combustible materials.

NFPA fire hazard : 0 - Materials that will not burn.

NFPA reactivity : 0 - Normally stable, even under fire exposure conditions, and are not reactive with water.



HMIS III Rating

Health : 0 Minimal Hazard - No significant risk to health

Flammability : 0 Minimal Hazard

Physical : 0 Minimal Hazard

CIL Mixture SDS

This information is based on our current knowledge and is intended to describe the product for the purposes of health, safety and environmental requirements only. It should not therefore be construed as guaranteeing any specific property of the product

CERTIFICATE OF ANALYSIS

AccuTrace™ Reference Standard

Catalog No: IC-PER-10X-1
Description: Perchlorate Standard
Element: Perchlorate (ClO_4)
SRM: ind. Std.
Lot: 222075022
Matrix: Water
Hazards: *Refer to SDS for complete safety information*

Signal Word: None

Date Certified: Jul 14, 2022
Expiration: Aug 14, 2024
Sample Size: 100 mL
Components: 1
Storage Condition: Ambient (>5 °C)

Certified Reference Material

ANAB AR-1463

Component		SRM #	Certified Concentration (µg/mL)
ClO_4	Perchlorate	Ind. Std.	1000

This Certified Reference Material was verified in accordance with ISO/IEC 17025

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

The gravimetric uncertainty for this product is ±0.24%. The CRM uncertainty is ±2.4%.

The final solution was checked against an independent standard to verify its concentration.

We use the highest purity raw materials available to minimize impurity levels in the final solution. Typically 99.999%+ pure starting materials are used as well as ASTM Type I 18 megaohm deionized water.

All glassware used in preparation is Class A.

All weights are traceable through NIST, Test No. 684/289871-17

All bottles are triple rinsed with deionized water prior to use.

Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware. Keep bottle tightly capped.

Certified By: Meigan O'Leary

Meigan O'Leary, Inorganic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

The test results in this report meet NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted. Results pertain only to samples listed in this report. This report may not be reproduced, except in full, without the written approval of the laboratory. Questions should be directed to the person who signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Definitions/Glossary

Client: Katahdin Analytical Services
Job ID: 680-232120-1
Project/Site: Fort Jackson

Qualifiers

General Chemistry

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
680-232120-1

Receipt
The samples were received on 3/16/2023 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.7°C

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Katahdin Analytical Services
Job ID: 680-232120-1
Project/Site: Fort Jackson

Laboratory: Eurofins Savannah

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
ANAB	Dept. of Defense ELAP	L2463	09-22-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
9060A		Water	DOC Result 1
9060A		Water	DOC Result 2
9060A		Water	DOC Result 3
9060A		Water	DOC Result 4

Method Summary

Client: Katahdin Analytical Services
Job ID: 680-232120-1
Project/Site: Fort Jackson

Method	Method Description	Protocol	Laboratory
2320B-2011	Alkalinity, Total	SM	EET SAV
9060A	Organic Carbon, Dissolved (DOC)	SW846	EET SAV

Protocol References:

SM = "Standard Methods For The Examination Of Water And Wastewater"

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Lab Name: Eurofins Savannah Job No.: 680-232120-1

SDG No.:

Batch Number: 768986 Batch Start Date: 03/21/23 20:07 Batch Analyst: Marsi, Julia

Batch Method: 9060A Batch End Date: 03/22/23 00:52

Lab Sample ID	Client Sample ID	Method Chain	Basis	TOC_CALSTD_6 00151	AnalysisComment				
CCB 680-768986/18		9060A			The final volume of these samples was fixed at 50 by the TOCControlV preprocessor.				

Batch Notes	
Acid ID	7992406
Pipette/Syringe/Dispenser ID	IC15
Filter ID	7084780
pH Paper ID	7593904
Batch Comment	Preserve Check: 768915

Basis	Basis Description
D	Dissolved

The pound sign (#) in the amount added field denotes that the reagent was used undiluted. All calculations are performed using the stated concentration for this reagent.

General Chemistry Raw Data Report

Job ID: 680-232120-1

Batch: 769235 **Analyst Initials: PG**

Method: 2320B-2011 **Instrument: PC Titrate**

Lab Sample ID: MB 680-769235/4 **Analysis Date: Mar 22, 2023 18:10**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	-6.4187	mg/L

Lab Sample ID: LCS 680-769235/6 **Analysis Date: Mar 22, 2023 18:26**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	254.5479	mg/L

Lab Sample ID: 680-232120-A-1 **Analysis Date: Mar 22, 2023 18:46**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	-6.4581	mg/L

Lab Sample ID: 680-232120-A-4 **Analysis Date: Mar 22, 2023 18:52**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	5.5041	mg/L

Lab Sample ID: 680-232120-A-5 **Analysis Date: Mar 22, 2023 18:59**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	0.7405	mg/L

Lab Sample ID: 680-232120-A-6 **Analysis Date: Mar 22, 2023 19:04**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	5.2857	mg/L

Lab Sample ID: 680-232120-A-7 **Analysis Date: Mar 22, 2023 19:09**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	5.1445	mg/L

Lab Sample ID: 680-232120-A-3 **Analysis Date: Mar 22, 2023 19:16**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	11.6140	mg/L

Lab Sample ID: 680-232120-A-2 **Analysis Date: Mar 22, 2023 22:06**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	11.1338	mg/L

Lab Sample ID: LCSD 680-769235/31 **Analysis Date: Mar 22, 2023 22:36**

Analyte	Detector	Dilution	Raw Result	Unit
Alkalinity	None	1	255.7094	mg/L

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

EXECUTIVE NARRATIVE

Sample Delivery Group: SQ1188
Laboratory: Katahdin Analytical Services
Site: Fort Jackson
Sampling dates: 3/8/2023
Number of Samples: 8
Test Method: SW-846 8330
Analysis: Explosives

Quality Assurance Project Plan: Draft Contract Quality Assurance Project Plan FY20 Update Operational Range Assessments, FY18-22 Army Operational Range Assessment Cycle, Multiple Sites for Active Army and Army Reserve, April 2020 (QAPP).

Validation Guidelines: United States Environmental Protection Agency (USEPA) Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review, EPA-540-R-2017-002. Office of Superfund Remediation and Technology Innovation, January 2017; Department of Defense General Data Validation Guidelines, February 2018; and USEPA SW-846 Test Method 8330B: Nitroaromatics, Nitroamines, and Nitrate Esters by High Performance Liquid Chromatography (HPLC), Revision 2, October 2006.

Client Sample ID	Laboratory Sample Identification	Matrix	Validation Stage
JACKSON-SDCC3-DC-01	SQ1188-1	sediment	S2BVM
JACKSON-SDCC2-DC-01	SQ1188-3	sediment	S2BVM
JACKSON-SDMC3-DC-01	SQ1188-5	sediment	S2BVM
JACKSON-SDMC1-DC-01	SQ1188-7	sediment	S2BVM
JACKSON-SDCC4-DC-01	SQ1188-9	sediment	S2BVM
JACKSON-SDJC1-DC-01	SQ1188-11	sediment	S2BVM
JACKSON-SDMC2-DC-01	SQ1188-13	sediment	S2BVM
SDDUP	SQ1188-15	sediment	S2BVM

Table 1 provides a summary of the major and minor data quality issues applied to this data set. All data are acceptable except those results which have been qualified with “X”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an "X" flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. "X" values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The samples arrived at the laboratory in acceptable condition.

Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detect results will be flagged as not detected at an estimated quantitation limit, "UJ", unless the holding time is grossly exceeded (by more than two times the holding time specified), in which case non-detect results are flagged X, rejected. Qualifications were applied to the samples and analytes as shown below.

No problems were found with this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

Percent Relative Standard Deviation and Percent Difference

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent difference (%D) compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent difference is a measure of the instrument's daily performance. If %RSD exceeds limits outlined in validation guidance (20%), qualify all associated positive results "J". If the %D exceeds a limit of 20% for any analyte, qualify all associated positive results "J" and non-detects "UJ". If %RSD and %D grossly exceed QC criteria, non-detect data may be qualified X.

The %RSD values for the target analytes were within quality control limits in all cases.

Continuing calibration verifications (CCV) were analyzed at the proper frequencies, and all observed %D values for those associated with reported results for the samples in this sample delivery group (SDG) met quality control criteria for the compounds reported with the following exceptions.

The observed %D values for tetryl in two CCVs on the primary column on instrument HPLC02 were outside of acceptance limits. All samples in this SDG are associated with the non-compliant CCVs. The results reported for tetryl were non-detected, therefore, have been qualified "UJ" on this basis.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks (i.e. method, trip, field, or rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks, field, equipment, and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, trip blank, or lab blank has an analyte detection greater than the analyte method detection limit (MDL), then all associated field samples are flagged according to validation guidance.

A) Method blank contamination:

No problems were found for this criterion.

B) Field/Equipment blank contamination:

No sample was submitted as an equipment blank in association with the samples in this SDG.

6. SURROGATES/SYSTEM MONITORING COMPOUNDS

All samples are spiked with surrogate/system monitoring compounds (SMC) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate/SMC concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below. All surrogates should meet the laboratory advisory limits.

No problems were found with this criterion with the following exceptions.

The surrogate recovery observed during the analysis of sample JACKSON-SDMC1-DC-01 was less than the lowest acceptance limit. Potential low bias is indicated. The results reported for target analytes in the impacted sample were all non-detect and have been qualified "UJ" on this basis.

7. COMPOUND QUANTIFICATION

Target compound result quantitation was not reviewed at the Stage 2B level.

Manual integrations were not reviewed at the Stage 2B level.

8. COMPOUND IDENTIFICATION

Explosives Fraction

The retention times (RTs) of reported compounds must fall within the calculated retention time windows for the two chromatographic columns. The %D of the positive results obtained on the two GC columns should be less than or equal to 25%.
Retention Time

No problems were found for this criterion.

Percent Difference

The concentration of reported compounds from the two chromatographic columns must have a relative percent difference RPD of less than 40% as stated in the project QAPP.

No problems were found for this criterion.

9. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY

Matrix spike/matrix spike duplicate (MS/MSD) data is generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data. The spiking compound recoveries should meet the limits outlined in the Department of Defense Quality Systems Manual Version 5.1. Further, per the QAPP the reproducibility as demonstrated by relative percent difference (RPD) for the pair must be less than 20%.

Sample JACKSON-SDMC3-DC-01 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all precision and accuracy indictors were favorable.

10. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. Per the project QAPP, a control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times (5x) the LOQ. A control limit of the +/- the LOQ shall be used if either the sample or duplicate value is less than 5x the LOQ. For field duplicate analyses that do not meet the technical criteria, the action is applied to only the field sample and it's duplicate.

Samples JACKSON-SDMC3-DC-01 and SDDUP were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

11. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Aqueous/water, soil/sediment, wipe, and filter LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control (QA/QC) procedures as employed for the samples. All LCS percent recoveries must fall within control limits identified in the Department of Defense Quality Systems Manual Version 5.1. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion requiring qualification of sample results.

12. OTHER PROBLEMS

None.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

No dilution, re-extraction, or other re-analysis was performed on the samples in association with this SDG.

Table 1 Major and Minor Findings

	Were acceptance criteria met?		
	Yes	No	
Explosives		Major	Minor
Sample Preservation	x		
Holding Time	x		
Percent Relative Standard Deviation and Percent Difference			x
Method Blank	x		
Equipment/Field Blank	NA		
Surrogates/System Monitoring Compounds			x
Compound Quantification	NA		
Compound Identification – Explosives	NA		
Matrix Spike/Matrix Spike Duplicate	x		
Field Duplicate	x		
Laboratory Control Samples	x		
Other Quality Control Data out of Specification	x		

Major = Major data quality issue identified resulting in rejection of data.
Minor = Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2 Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
X	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

EXECUTIVE NARRATIVE

Sample Delivery Group: SQ1188
Laboratory: Katahdin Analytical Services
Site: Fort Jackson
Sampling dates: 3/8/2023
Number of Samples: 8
Test Method: SW-846 6010
Analysis: Sediment: Simultaneously Extracted Metals (SEM)
Cadmium, Copper, Lead, Nickel, Silver, Zinc.

Quality Assurance Project Plan: Final Site-Specific Quality Assurance Project Plan Operational Range Assessments, FY18-22 Army Operational Range Assessment Cycle, Peason Ridge, Louisiana, August 2021 (QAPP).

Validation Guidelines: United States Department of Defense, Quality Systems Manual, Rev. 5.1 2017, and United States Environmental Protection Agency (USEPA) Contract Laboratory National Functional Guidelines for Superfund Inorganic Methods Data Review, (USEPA 2017) and United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), November 2019, General Data Validation Guidelines.

Client Sample Identification	Laboratory Sample Identification	Matrix	Validation Stage
JACKSON-SDCC3-DC-01	SQ1188-002	sediment	S2BVM
JACKSON-SDCC2-DC-01	SQ1188-004	sediment	S2BVM
JACKSON-SDMC3-DC-01	SQ1188-006	sediment	S2BVM
JACKSON-SDMC1-DC-01	SQ1188-008	sediment	S2BVM
JACKSON-SDCC4-DC-01	SQ1188-010	sediment	S2BVM
JACKSON-SDJC1-DC-01	SQ1188-012	sediment	S2BVM
JACKSON-SDMC2-DC-01	SQ1188-014	sediment	S2BVM
SDDUP	SQ1188-016	sediment	S2BVM

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “X”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an "X" flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. "X" values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW:

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION:

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects will be flagged as not detected at an estimated quantitation limit, "UJ", unless the holding time is grossly exceeded (by more than two times the holding time specified), in which case non-detect results are flagged " ", rejected. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

4. CALIBRATION:

Method requirements for satisfactory instrument calibration are established to ensure that the instrument can produce acceptable quantitative data. Initial calibration verification (ICV) demonstrates that the instrument is capable of acceptable performance at the beginning of the analytical run. Continuing calibration verification (CCV) demonstrates that the initial calibration is still valid by checking the performance of the instrument on a continuing basis.

Initial and Continuing Calibration Verification:

Immediately after each system has been calibrated, the accuracy of the initial calibration must be verified and documented for each target analyte by the analysis of an ICV solution(s). The CCV standard shall be analyzed at a frequency of one for every 10 field samples analyzed during an analytical run, at the beginning of the run, and again after the last analytical sample. The percent recovery acceptable limits for ICV/CCV are 90 – 110% for metals. The percent recovery acceptable limits for the Contract Required Detection Limit (CRDL) standard for metals are 80-120%. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

5. BLANK CONTAMINATION:

Quality assurance blanks, i.e., instrument, preparation, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Calibration blanks (ICB and CCB) are used to ensure a stable instrument baseline before and during the analysis of analytical samples. Preparation blanks measure laboratory contamination. Field blanks or lab blanks should not have an analyte detection greater than ½ the analyte Limit of Quantitation (LOQ), or one tenth the concentration of associated samples. However, any positive blank result is assessed against all associated field sample results per validation guidance and data are flagged accordingly. Qualifications were applied to the samples and analytes as shown below.

A) Method blank contamination:

No problems were found for this criterion with the following exceptions. Cadmium and zinc were positively identified in the method blank associated with all samples in this sample delivery group (SDG). Positive sample results for the impacted analytes have been evaluated and qualified per validation guidance on this basis.

B) Instrument blank contamination:

No problems were found for this criterion with the following exceptions.

Zinc and cadmium were positively detected in several calibration blanks. All samples are associated. Positive sample results for the impacted analytes have been evaluated and qualified per validation guidance on this basis.

C) Field /Equipment blank contamination:

No samples were submitted as a field/equipment blank associated with the samples in this SDG.

6. INTERFERENCE CHECK SAMPLE:

The Interference Check Sample (ICS) verifies the analytical instrument's ability to overcome interferences typical of those found in samples. The laboratory analyzed and reported ICS results for all elements being reported from the analytical run and for all interferents (target and non-target) for these reported elements. The ICS consists of two solutions: Solution A and Solution AB. Solution A consists of the interferents, and Solution AB consists of the analytes mixed with the interferents. Results for the analysis of ICS Solution must fall within the control limits of ± 20% or ±CRQL (whichever is greater) of the true value for the analytes and interferents included in the solution. If results that are greater than or equal to the level of detection (LOD) are observed for analytes that are not present in the ICS solution, the possibility of false positives exists. If negative results are observed for analytes that are not present in the ICS solution, and their absolute value is greater than or equal to the LOD, the possibility of false negatives in the samples exists. In general, sample data can be accepted if the concentrations of Al, Ca, Fe, and Mg in the sample are found to be less than or equal to their respective concentrations in the ICS. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

7. LABORATORY CONTROL SAMPLE:

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis. Aqueous/water and soil/sediment LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control procedures as employed for the samples. Per the QAPP all LCS percent recoveries must fall within the limits specified in the US DOD Quality Systems Manual 5.1. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

8. MATRIX SPIKE/MATRIX SPIKE DUPLICATE/LABORATORY DUPLICATE:

The matrix spike/matrix spike duplicate (MS/MSD) sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The matrix spike percent recoveries and relative percent difference (RPD) values must fall within the control limits established in the QAPP. However, spike recovery limits do not apply when the sample concentration is greater than or equal to four times the spike added.

Sample JACKSON-SDMC1-DC-01 was submitted for MS/MSD and/or laboratory duplicate evaluations in association with the samples in this SDG. Upon evaluation, all precision and accuracy indicators were favorable.

9. SERIAL DILUTION:

The serial dilution determines whether significant physical or chemical interferences exist due to sample matrix. If the analyte concentration is sufficiently high (concentration in the original sample is greater than 50 times the LOQ), the percent difference between the original determination and the serial dilution analysis (a five-fold dilution) after correction for dilution shall be less than 10. For a serial dilution analysis that does not meet the technical criteria, the action was applied to only the field sample used to prepare the serial dilution sample.

Serial dilution analysis was performed on sample JACKSON-SDMC1-DC-01 in association with the samples in this SDG. No problems were found for this criterion.

10. FIELD DUPLICATES:

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times (5x) the LOQ. A control limit of two times the LOQ shall be used if either the sample or duplicate value is less than 5x the LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the field sample and its duplicate.

Samples JACKSON-SDMC3-DC-01 and SDDUP were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

11. ANALYTE QUANTIFICATION AND REPORTED DETECTION LIMITS:

Analyte quantitation was not verified as part of the Level 2B data validation.

Reported detection limits were evaluated for all samples in the delivery group. In all cases the Limit of Quantitation (LOQ) specified in the QAPP for the analytes reported have been achieved.

12. SYSTEM PERFORMANCE:

None.

Table 1 Major and Minor Findings

	Were acceptance criteria met?		
	Yes	No	
SEM		**Major**	**Minor**
Holding Time	X		
Initial and Continuing Calibration Verification	X		
Initial and Continuing Calibration Blanks			X
Method Blank			X
Field or Rinse Blank	NA		
Interference Check Standards	X		
Matrix Spike/Matrix Spike Duplicate	X		
Laboratory Control Sample	X		
ICP Serial Dilution	X		
Field Duplicate	X		

Major = Major data quality issue identified resulting in rejection of data.
Minor = Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2 Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW:

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION:

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects will be flagged as not detected at an estimated quantitation limit, "UJ", unless the holding time is grossly exceeded (by more than two times the holding time specified), in which case non-detect results are flagged "X", rejected. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

4. INSTRUMENT TUNE ANALYSIS:

The Inductively Coupled Plasma/Mass Spectrometer (ICP/MS) must be tuned on a daily basis prior to calibration. The ICP/MS tune serves as an initial demonstration of instrument stability and precision.

Instrument tunes were verified and found to have been performed daily prior to each instrument calibration. Further, the percent relative standard deviation observed for the instrumental scans for each isotope were less than or equal to five percent in all cases.

5. CALIBRATION:

Method requirements for satisfactory instrument calibration are established to ensure that the instrument can produce acceptable quantitative data. Initial calibration verification (ICV) demonstrates that the instrument is capable of acceptable performance at the beginning of the analytical run. Continuing calibration verification (CCV) demonstrates that the initial calibration is still valid by checking the performance of the instrument on a continuing basis.

Initial and Continuing Calibration Verification:

Immediately after each system has been calibrated, the accuracy of the initial calibration must be verified and documented for each target analyte by the analysis of an ICV solution(s). The CCV standard shall be analyzed at a frequency of one for every 10 field samples analyzed during an analytical run, at the beginning of the run, and again after the last analytical sample. The percent recovery acceptable limits for ICV/CCV are 90 – 110% for metals. The percent recovery acceptable limits for the Contract Required Detection Limit (CRDL) standard for metals are 80-120%. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

6. BLANK CONTAMINATION:

Quality assurance blanks, i.e., instrument, preparation, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Calibration blanks (ICB and CCB) are used to ensure a stable instrument baseline before and during the analysis of analytical samples. Preparation blanks measure laboratory contamination. Field blanks or lab blanks should not have an analyte detection greater than ½ the analyte Limit of Quantitation (LOQ), or one tenth the concentration of associated samples. However, any positive blank result is assessed against all associated field sample results per validation guidance and data are flagged accordingly. Qualifications were applied to the samples and analytes as shown below.

A) Method blank contamination:

Copper, lead and zinc were positively identified in the method blank associated with the samples listed below in this sample delivery group (SDG).

JACKSON-SDCC3-DC-01	*JACKSON-SDMC3-DC-01*	*JACKSON-SDCC4-DC-01*
JACKSON-SDCC2-DC-01	*JACKSON-SDMC1-DC-01*	*SDDUP*

Positive sample results for copper, lead, and zinc have been evaluated and qualified per validation guidance on this basis as appropriate.

Lead and zinc were positively detected in the method blank associated with samples JACKSON-SDJC1-DC-01 and JACKSON-SDMC2-DC-01. Positive sample results for lead and zinc have been evaluated and qualified per validation guidance on this basis as appropriate.

B) Instrument blank contamination:

No problems were found for this criterion requiring result qualification on this basis.

C) Field /Equipment blank contamination:

No sample was submitted as a field/equipment blank in association with this sample SDG.

7. INTERFERENCE CHECK SAMPLE:

The Interference Check Sample (ICS) verifies the analytical instrument's ability to overcome interferences typical of those found in samples. The laboratory analyzed and reported ICS results for all elements being reported from the analytical run and for all interferents (target and non-target) for these reported elements. The ICS consists of two solutions: Solution A and Solution AB. Solution A consists of the interferents, and Solution AB consists of the analytes mixed with the interferents. Results for the analysis of ICS Solution must fall within the control limits of ± 20% or ±CRQL (whichever is greater) of the true value for the analytes and interferents included in the solution. If results that are greater than or equal to the limit of detection (LOD) are observed for analytes that are not present in the ICS solution, the possibility of false positives exists. If negative results are observed for analytes that are not present in the ICS solution, and their absolute value is greater than or equal to the LOD, the possibility of false negatives in the samples exists. In general, sample data can be accepted if the concentrations of Al, Ca, Fe, and Mg in the sample are found to be less than or equal to their respective concentrations in the ICS. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

8. LABORATORY CONTROL SAMPLE:

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis. Aqueous/water and soil/sediment LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control procedures as employed for the samples. Per the QAPP all LCS percent recoveries must fall within the limits specified in the US DOD Quality Systems Manual 5.1. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

9. MATRIX SPIKE/MATRIX SPIKE DUPLICATE:

The matrix spike/matrix spike duplicate (MS/MSD) sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The matrix spike percent recoveries and relative percent difference (RPD) values must fall within the control limits established in the QAPP. However, spike recovery limits do not apply when the sample concentration is greater than or equal to four times the spike added.

Sample JACKSON-SDMC3-DC-01 was submitted for MS/MSD and/or laboratory duplicate evaluations in association with this SDG. Upon evaluation all precision and accuracy indicators were favorable with the following exception. Both MS and MSD recoveries observed for antimony were lower than the lowest acceptance limit. The antimony result reported in the parent sample has been qualified "J" estimated on this basis.

10. SERIAL DILUTION:

The serial dilution determines whether significant physical or chemical interferences exist due to sample matrix. If the analyte concentration is sufficiently high (concentration in the original sample is greater than 50 times the detection limit), the percent difference between the original determination and the serial dilution analysis (a five-fold dilution) after correction for dilution shall be less than 10. For a serial dilution analysis that does not meet the technical criteria, the action was applied to only the field sample used to prepare the serial dilution sample.

Sample JACKSON-SDMC3-DC-01 was submitted for serial dilution analysis. No problems were found for this criterion.

11. INTERNAL STANDARDS PERFORMANCE:

Internal standards were added to all sample and quality assurance evaluation digestates prior to analysis to monitor analytical performance and sample matrix effects.

All samples and associated quality assurance analyses had internal standard percent recoveries within validation acceptance criteria of 30-120%.

12. FIELD DUPLICATES:

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times (5x) the LOQ. A control limit of two times the LOQ shall be used if either the sample or duplicate value is less than 5x the LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the field sample and it's duplicate.

Samples JACKSON-SDMC3-DC-01 and SDDUP were submitted as a field duplicate pair. Adequate field precision was demonstrated.

13. ANALYTE QUANTIFICATION AND REPORTED DETECTION LIMITS:

Analyte quantitation was not verified as part of the Level 2B data validation.

Reported detection limits were evaluated for all samples in the delivery group. In all cases the Limit of Quantitation (LOQ) specified in the QAPP for the analytes reported have been achieved.

14. SYSTEM PERFORMANCE:

No other problems were found.

Table 1 Major and Minor Findings

	Were acceptance criteria met?		
	Yes	No	
Metals		**Major**	**Minor**
Holding Time	X		
Instrument Tune Analysis	X		
Initial and Continuing Calibration Verification	X		
Initial and Continuing Calibration Blanks	X		
Method Blank			X
Field or Rinse Blank	NA		
Interference Check Standards	X		
Matrix Spike/Matrix Spike Duplicate			X
Laboratory Control Sample	X		
ICP Serial Dilution	X		
Internal Standard Performance	X		
Field Duplicate	X		

Major = Major data quality issue identified resulting in rejection of data.
Minor = Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2 Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

ENVIRONMENTAL DATA SERVICES, LTD.

EXECUTIVE NARRATIVE

Sample Delivery Group: SQ1188
Laboratory: Katahdin Analytical Services and Eurofins Lancaster Laboratories Environment Testing, LLC
Site: Fort Jackson
Sampling dates: 03/08/2023
Number of Samples: 8
Test Method: USEPA 821/R-91-100 and Llyod Kahn
Analysis: Acid Volatile Sulfide (AVS) and Total Organic Carbon (TOC)

Quality Assurance Project Plan: Draft Contract Quality Assurance Project Plan FY20 Update Operational Range Assessments, FY18-22 Army Operational Range Assessment Cycle, Multiple Sites for Active Army and Army Reserve, April 2020 (QAPP).

Validation Guidelines: United States Department of Defense, Quality Systems Manual, Rev. 5.1 2017, and United States Environmental Protection Agency (USEPA) Contract Laboratory National Functional Guidelines for Superfund Inorganic Methods Data Review, (USEPA 2017) and United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), November 2019, General Data Validation Guidelines.

Client Sample Identification	Laboratory Sample Identification	Matrix	Validation Stage
JACKSON-SDCC3-DC-01	SQ1188-2 / 410-119054-1	sediment	S2BVM
JACKSON-SDCC2-DC-01	SQ1188-4/ 410-119054-2	sediment	S2BVM
JACKSON-SDMC3-DC-01	SQ1188-6/ 410-119054-3	sediment	S2BVM
JACKSON-SDMC1-DC-01	SQ1188-8/ 410-119054-4	sediment	S2BVM
JACKSON-SDCC4-DC-01	SQ1188-10/ 410-119054-5	sediment	S2BVM
JACKSON-SDJC1-DC-01	SQ1188-12/ 410-119054-6	sediment	S2BVM
JACKSON-SDMC2-DC-01	SQ1188-14/ 410-119054-7	sediment	S2BVM
SDDUP	SQ1188-16/ 410-119054-8	sediment	S2BVM

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “X”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an "X" flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. "X" values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW:

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION:

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J" or "UJ" as appropriate. When holding times are exceeded by more than twice the time specified, the non-detects will be flagged as unusable, "X". Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

4. CALIBRATION:

Method requirements for satisfactory instrument or procedural calibration are established to ensure that the instrument can produce acceptable quantitative data. Initial calibration verification (ICV) demonstrates that the instrument is capable of acceptable performance at the beginning of the analytical run. Continuing calibration verification (CCV) demonstrates that the initial calibration is still valid by checking the performance of the instrument on a continuing basis. Immediately after each system has been calibrated, the accuracy of the initial calibration must be verified and documented for each target analyte by the analysis of an ICV solution(s). The CCV standard shall be analyzed at a frequency of every 10 samples. The percent relative standard deviation (%RSD) should be less than 20% or the correlation coefficient greater than 0.995. Qualifications were applied to the samples and analytes as shown below.

Calibrations were performed at the appropriate frequency and resulted in %RSD and correlation coefficient values within guidance in all cases. Further, all ICV and CCV evaluations were within acceptance criteria with the following exception. Multiple continuing calibrations associated with all samples in this sample delivery group (SDG) were outside acceptance limits for TOC. The positive sample results for the impacted analyte have been qualified estimated "J" on this basis.

.

5. BLANK CONTAMINATION:

Quality assurance blanks, i.e., instrument, preparation, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Calibration blanks (ICB and CCB) are used to ensure a stable instrument baseline before and during the analysis of analytical samples. Preparation blanks measure laboratory contamination. Field blanks or lab blanks should not have an analyte detection greater than ½ the analyte Limit of Quantitation (LOQ), or one tenth the concentration of associated samples. However, any positive blank result is assessed against all associated field sample results per validation guidance and data are flagged accordingly. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

6. LABORATORY CONTROL SAMPLE:

The Laboratory Control Sample (LCS) serves to monitor the overall performance of each step during the analysis. Aqueous/water and soil/sediment LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control procedures as employed for the samples. All LCS percent recoveries must fall within the control limits of 85-115% for total organic carbon. All LCS percent recoveries must fall within the laboratory control limits for acid volatile sulfide. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion with the following exception. The LCS samples associated with all samples in this SDG were higher than the highest acceptance limit for TOC. The positive sample results for the impacted analyte have been qualified estimated "J" on this basis.

7. MATRIX SPIKE/MATRIX SPIKE DUPLICATE:

The matrix spike/matrix spike duplicate (MS/MSD) sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The spike percent recovery must fall within the established QAPP acceptance limits, with a relative percent difference between the two of less than 20%. However, spike recovery limits do not apply when the sample concentration is greater than or equal to four times the spike added. For a spike analysis that does not meet the technical criteria, the action was applied to all samples in the preparation batch.

Sample JACKSON-SDMC3-DC-01 was submitted for MS/MSD pair evaluation in association with this SDG for TOC. Upon evaluation, all precision and accuracy indicators were favorable.

Sample SDDUP was submitted for MS/matrix duplicate (MD) pair evaluation in association with this SDG for AVS. Upon evaluation, all precision and accuracy indicators were favorable with the following exception. The observed percent recovery in the MS was lower than the lowest acceptance limit for AVS. The non-detected sample result for the impacted analyte has been qualified estimated "UJ" on this basis.

8. FIELD DUPLICATES:

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times the LOQ. A control limit of two times the LOQ shall be used if either the sample or duplicate value is less than five times the LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the field sample and its duplicate.

Samples JACKSON-SDMC3-DC-01 and SDDUP were submitted as a field duplicate pair in association with this SDG. Upon evaluation, adequate field precision was demonstrated.

9. OTHER PROBLEMS:

None.

JACKSON-SWCC3-DC-01	SQ1201-6	surface water	S2BVM
JACKSON-SWCC4-DC-01	SQ1201-7	surface water	S2BVM
JACKSON-EB-01	SQ1201-9	equipment blank	S2BVM
JACKSON-CB-01	SQ1201-10	container blank	S2BVM

Table 1 provides a summary of the major and minor data quality issues applied to this data set. All data are acceptable except those results which have been qualified with “X”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an "X" flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. "X" values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION

The samples arrived at the laboratory in acceptable condition.

Proper custody was documented.

3. HOLDING TIME

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detect results will be flagged as not detected at an estimated quantitation limit, "UJ", unless the holding time is grossly exceeded (by more than two times the holding time specified), in which case non-detect results are flagged X, rejected. Qualifications were applied to the samples and analytes as shown below.

No problems were found with this criterion.

4. CALIBRATION

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

Percent Relative Standard Deviation and Percent Difference

Percent relative standard deviation (%RSD) is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent difference (%D) compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent difference is a measure of the instrument's daily performance. If %RSD exceeds limits outlined in validation guidance (20%), qualify all associated positive results "J". If the %D exceeds a limit of 20% for any analyte, qualify all associated positive results "J" and non-detects "UJ". If %RSD and %D grossly exceed QC criteria, non-detect data may be qualified X.

The %RSD values for the target analytes were within quality control limits in all cases.

Continuing calibration verifications (CCV) were analyzed at the proper frequencies, and all observed %D values for those associated with reported results for the samples in this SDG met quality control criteria for the compounds reported.

5. BLANK CONTAMINATION

Quality assurance (QA) blanks (i.e. method, trip, field, or rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks, field, equipment, and rinse blanks measure cross-contamination of samples during field operations. When an equipment blank, trip blank, or lab blank has an analyte detection greater than the analyte method detection limit (MDL), then all associated field samples are flagged according to validation guidance.

A) Method blank contamination:

No problems were found for this criterion.

B) Field/Equipment blank contamination:

Samples JACKSON-EB-01 and JACKSON-CB-01 were submitted as equipment/container blanks in association with the samples in this sample delivery group (SDG). No problems were found for this criterion.

6. SURROGATES/SYSTEM MONITORING COMPOUNDS

All samples are spiked with surrogate/system monitoring compounds (SMC) prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. If the measured surrogate/SMC concentrations were outside contract specifications, qualifications were applied to the samples and analytes as shown below. All surrogates should meet the laboratory advisory limits.

No problems were found with this criterion with the following exceptions.

The surrogate recovery observed during the analysis of sample JACKSON-SWJC1-DC-01 was lower than the lowest acceptance limit. Potential low bias is indicated. The results reported for target analytes in the impacted sample were all non-detect and have been qualified "UJ" on this basis.

7. COMPOUND QUANTIFICATION

Target compound result quantitation was not reviewed at the Stage 2B level.

Manual integrations were not reviewed at the Stage 2B level.

8. COMPOUND IDENTIFICATION

Explosives Fraction

The retention times (RTs) of reported compounds must fall within the calculated retention time windows for the two chromatographic columns. The %D of the positive results obtained on the two GC columns should be less than or equal to 25%.

Retention Time

No problems were found for this criterion.

Percent Difference

The concentration of reported compounds from the two chromatographic columns must have a relative percent difference RPD of less than 40% as stated in the project QAPP.

No problems were found for this criterion.

9. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY

Matrix spike/matrix spike duplicate (MS/MSD) data is generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data. The spiking compound recoveries should meet the limits outlined in the Department of Defense Quality Systems Manual Version 5.1. Further, per the QAPP the reproducibility as demonstrated by relative percent difference (RPD) for the pair must be less than 20%.

Sample JACKSON-SWMC3-DC-01 was submitted as an MS/MSD pair in association with this SDG. Upon evaluation all precision and accuracy indictors were favorable or did not require qualification of sample results.

10. FIELD DUPLICATES

Field duplicates may be taken and analyzed as an indication of overall precision. Per the project QAPP, a control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times (5x) the LOQ. A control limit of the +/- the LOQ shall be used if either the sample or duplicate value is less than 5x the LOQ. For field duplicate analyses that do not meet the technical criteria, the action is applied to only the field sample and it's duplicate.

Samples JACKSON-SWMC3-DC-01 and SWDUP were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

11. LABORATORY CONTROL SAMPLES

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Aqueous/water, soil/sediment, wipe, and filter LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control (QA/QC) procedures as employed for the samples. All LCS percent recoveries must fall within control limits identified in the Department of Defense Quality Systems Manual Version 5.1. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion requiring qualification of sample results.

12. OTHER PROBLEMS

None.

13. DILUTIONS, RE-EXTRACTIONS & REANALYSIS

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

No dilution, re-extraction, or other re-analysis was performed on the samples in association with this SDG.

Table 1 Major and Minor Findings

	Were acceptance criteria met?		
	Yes	No	
Explosives		Major	Minor
Sample Preservation	x

Other Quality Control Data out of Specification	x		

Major = Major data quality issue identified resulting in rejection of data.
Minor = Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2 Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
X	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “X”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an "X" flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. "X" values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW:

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION:

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects will be flagged as not detected at an estimated quantitation limit, "UJ", unless the holding time is grossly exceeded (by more than two times the holding time specified), in which case non-detect results are flagged "X", rejected. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

4. CALIBRATION:

Method requirements for satisfactory instrument calibration are established to ensure that the instrument can produce acceptable quantitative data. Initial calibration verification (ICV) demonstrates that the instrument is capable of acceptable performance at the beginning of the analytical run. Continuing calibration verification (CCV) demonstrates that the initial calibration is still valid by checking the performance of the instrument on a continuing basis.

Initial and Continuing Calibration Verification:

Immediately after each system has been calibrated, the accuracy of the initial calibration must be verified and documented for each target analyte by the analysis of an ICV solution(s). The CCV standard shall be analyzed at a frequency of one for every 10 field samples analyzed during an analytical run, at the beginning of the run, and again after the last analytical sample. The percent recovery acceptable limits for ICV/CCV are 90 – 110% for metals. The percent recovery acceptable limits for the Contract Required Detection Limit (CRDL) standard for metals are 80-120%. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

5. BLANK CONTAMINATION:

Quality assurance blanks, i.e., instrument, preparation, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Calibration blanks (ICB and CCB) are used to ensure a stable instrument baseline before and during the analysis of analytical samples. Preparation blanks measure laboratory contamination. Field blanks or lab blanks should not have an analyte detection greater than ½ the analyte Limit of Quantitation (LOQ), or one tenth the concentration of associated samples. However, any positive blank result is assessed against all associated field sample results per validation guidance and data are flagged accordingly. Qualifications were applied to the samples and analytes as shown below.

A) Method blank contamination:

No problems were found for this criterion with the following exceptions.

Potassium was positively detected in the method blank associated with all samples in this sample delivery group (SDG). Positive sample results for the impacted analyte have been evaluated and qualified per validation guidance as appropriate on this basis.

B) Instrument blank contamination:

No problems requiring result qualification were found for this criterion.

C) Field /Equipment blank contamination:

No samples were submitted as a field/equipment blank associated with the samples in this SDG.

6. INTERFERENCE CHECK SAMPLE:

The Interference Check Sample (ICS) verifies the analytical instrument's ability to overcome interferences typical of those found in samples. The laboratory analyzed and reported ICS results for all elements being reported from the analytical run and for all interferents (target and non-target) for these reported elements. The ICS consists of two solutions: Solution A and Solution AB. Solution A consists of the interferents, and Solution AB consists of the analytes mixed with the interferents. Results for the analysis of ICS Solution must fall within the control limits of ± 20% or ±CRQL (whichever is greater) of the true value for the analytes and interferents included in the solution. If results that are greater than or equal to the level of detection (LOD) are observed for analytes that are not present in the ICS solution, the possibility of false positives exists. If negative results are observed for analytes that are not present in the ICS solution, and their absolute value is greater than or equal to the LOD, the possibility of false negatives in the samples exists. In general, sample data can be accepted if the concentrations of Al, Ca, Fe, and Mg in the sample are found to be less than or equal to their respective concentrations in the ICS. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

7. LABORATORY CONTROL SAMPLE:

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis. Aqueous/water and soil/sediment LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control procedures as employed for the samples. Per the QAPP all LCS percent recoveries must fall within the limits specified in the US DOD Quality Systems Manual 5.1. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

8. MATRIX SPIKE/MATRIX SPIKE DUPLICATE/LABORATORY DUPLICATE:

The matrix spike/matrix spike duplicate (MS/MSD) sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The matrix spike percent recoveries and relative percent difference (RPD) values must fall within the control limits established in the QAPP. However, spike recovery limits do not apply when the sample concentration is greater than or equal to four times the spike added.

Sample JACKSON-SWMC3-DC-01 was submitted for MS/MSD and/or laboratory duplicate evaluations in association with the samples in this SDG. Upon evaluation all precision and accuracy indicators were favorable.

9. SERIAL DILUTION:

The serial dilution determines whether significant physical or chemical interferences exist due to sample matrix. If the analyte concentration is sufficiently high (concentration in the original sample is greater than 50 times the LOQ), the percent difference between the original determination and the serial dilution analysis (a five-fold dilution) after correction for dilution shall be less than 10. For a serial dilution analysis that does not meet the technical criteria, the action was applied to only the field sample used to prepare the serial dilution sample.

Sample JACKSON-SWMC3-DC-01 was submitted for serial dilution analysis in association with all samples in this SDG. No problems were found for this criterion.

10. FIELD DUPLICATES:

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times (5x) the LOQ. A control limit of two times the LOQ shall be used if either the sample or duplicate value is less than 5x the LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the field sample and its duplicate.

Samples JACKSON-SWMC3-DC-01 and SWDUP were submitted as a field duplicate pair. Adequate field precision was demonstrated.

11. ANALYTE QUANTIFICATION AND REPORTED DETECTION LIMITS:

Analyte quantitation was not verified as part of the Level 2B data validation.

Reported detection limits were evaluated for all samples in the delivery group. In all cases the Limit of Quantitation (LOQ) specified in the QAPP for the analytes reported have been achieved.

12. SYSTEM PERFORMANCE:

None.

Table 1 Major and Minor Findings

	Were acceptance criteria met?		
	Yes	No	
Metals		**Major**	**Minor**
Holding Time	X		
Initial and Continuing Calibration Verification	X		
Initial and Continuing Calibration Blanks	X		
Method Blank			X
Field or Rinse Blank	X		
Interference Check Standards	X		
Matrix Spike/Matrix Spike Duplicate	X

ICP Serial Dilution	X		
Field Duplicate	X		

Major = Major data quality issue identified resulting in rejection of data.
Minor = Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2 Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

ENVIRONMENTAL DATA SERVICES, LTD.

EXECUTIVE NARRATIVE

Sample Delivery Group: SQ1201
Laboratory: Katahdin Analytical Services
Site: Fort Jackson
Sampling dates: 3/8/2023
Number of Samples: 10
Test Method: SW-846 6020; SM 2340B
Analysis: Dissolved Antimony, Copper, Lead, Zinc, Calcium, and Magnesium; Hardness

Quality Assurance Project Plan: Draft Contract Quality Assurance Project Plan FY20 Update Operational Range Assessments, FY18-22 Army Operational Range Assessment Cycle, Multiple Sites for Active Army and Army Reserve, April 2020 (QAPP).

Validation Guidelines: United States Department of Defense, Quality Systems Manual, Rev. 5.1 2017, and United States Environmental Protection Agency (USEPA) Contract Laboratory National Functional Guidelines for Superfund Inorganic Methods Data Review, (USEPA 2017) and United States Department of Defense (DOD) Environmental Data Quality Workgroup (EDQW), November 2019, General Data Validation Guidelines.

Client Sample Identification	Laboratory Sample Identification	Matrix	Validation Stage
JACKSON-EB-01	SQ1201-009	equipment blank	S2BVM
JACKSON-CB-01	SQ1201-010	container blank	S2BVM
SWDUP	SQ1201-011	Surface water	S2BVM
JACKSON-SWMC3-DC-01	SQ1201-012	Surface water	S2BVM
JACKSON-SWMC2-DC-01	SQ1201-013	Surface water	S2BVM
JACKSON-SWJC1-DC-01	SQ1201-014	Surface water	S2BVM
JACKSON-SWMC1-DC-01	SQ1201-015	Surface water	S2BVM
JACKSON-SWCC3-DC-01	SQ1201-016	Surface water	S2BVM
JACKSON-SWCC4-DC-01	SQ1201-017	Surface water	S2BVM
JACKSON-SWCC2-DC-01	SQ1201-018	Surface water	S2BVM

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “X”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an "X" flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. "X" values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW:

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION:

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detects will be flagged as not detected at an estimated quantitation limit, "UJ", unless the holding time is grossly exceeded (by more than two times the holding time specified), in which case non-detect results are flagged "X", rejected. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

4. INSTRUMENT TUNE ANALYSIS:

The Inductively Coupled Plasma/Mass Spectrometer (ICP/MS) must be tuned on a daily basis prior to calibration. The ICP/MS tune serves as an initial demonstration of instrument stability and precision.

Instrument tunes were verified and found to have been performed daily prior to each instrument calibration. Further, the percent relative standard deviation observed for the instrumental scans for each isotope were less than or equal to five percent in all cases.

5. CALIBRATION:

Method requirements for satisfactory instrument calibration are established to ensure that the instrument can produce acceptable quantitative data. Initial calibration verification (ICV) demonstrates that the instrument is capable of acceptable performance at the beginning of the analytical run. Continuing calibration verification (CCV) demonstrates that the initial calibration is still valid by checking the performance of the instrument on a continuing basis.

Initial and Continuing Calibration Verification:

Immediately after each system has been calibrated, the accuracy of the initial calibration must be verified and documented for each target analyte by the analysis of an ICV solution(s). The CCV standard shall be analyzed at a frequency of one for every 10 field samples analyzed during an analytical run, at the beginning of the run, and again after the last analytical sample. The percent recovery acceptable limits for ICV/CCV are 90 – 110% for metals. The percent recovery acceptable limits for the Contract Required Detection Limit (CRDL) standard for metals are 80-120%. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion with the following exception. A CCV recovery for magnesium was greater than the upper acceptance limit. Samples JACKSON-CB-01 AND JACKSON-EB-01 were associated with the noncompliant CCV. The positive dissolved magnesium results reported for the impacted samples have been qualified "J+" on this basis.

6. BLANK CONTAMINATION:

Quality assurance blanks, i.e., instrument, preparation, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Calibration blanks (ICB and CCB) are used to ensure a stable instrument baseline before and during the analysis of analytical samples. Preparation blanks measure laboratory contamination. Field blanks or lab blanks should not have an analyte detection greater than ½ the analyte Limit of Quantitation (LOQ), or one tenth the concentration of associated samples. However, any positive blank result is assessed against all associated field sample results per validation guidance and data are flagged accordingly. Qualifications were applied to the samples and analytes as shown below.

A) Method blank contamination:

The analytes listed in the table below were positively identified in the method blank associated with all samples in this sample delivery group (SDG). Positive sample results for the impacted analytes have been evaluated and qualified per validation guidance on this basis.

antimony	*calcium*	*copper*
magnesium	*zinc*	

B) Instrument blank contamination:

No problems requiring result qualification were found for this criterion.

C) Field /Equipment blank contamination:

Samples JACKSON-EB-01 and JACKSON-CB-01 were submitted as field and container blanks in association with the samples in this SDG. The analytes listed in the table below were positively identified in one or both blanks. Positive results reported for impacted analytes have been evaluated and qualified per validation guidance as appropriate on this basis.

antimony	*calcium*	*copper*
magnesium	*zinc*	*hardness*

7. INTERFERENCE CHECK SAMPLE:

The Interference Check Sample (ICS) verifies the analytical instrument's ability to overcome interferences typical of those found in samples. The laboratory analyzed and reported ICS results for all elements being reported from the analytical run and for all interferents (target and non-target) for these reported elements. The ICS consists of two solutions: Solution A and Solution AB. Solution A consists of the interferents, and Solution AB consists of the analytes mixed with the interferents. Results for the analysis of ICS Solution must fall within the control limits of ± 20% or ±CRQL (whichever is greater) of the true value for the analytes and interferents included in the solution. If results that are greater than or equal to the limit of detection (LOD) are observed for analytes that are not present in the ICS solution, the possibility of false positives exists. If negative results are observed for analytes that are not present in the ICS solution, and their absolute value is greater than or equal to the LOD, the possibility of false negatives in the samples exists. In general, sample data can be accepted if the concentrations of Al, Ca, Fe, and Mg in the sample are found to be less than or equal to their respective concentrations in the ICS. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

8. LABORATORY CONTROL SAMPLE:

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis. Aqueous/water and soil/sediment LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control procedures as employed for the samples. Per the QAPP all LCS percent recoveries must fall within the limits specified in the US DOD Quality Systems Manual 5.1. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

9. MATRIX SPIKE/MATRIX SPIKE DUPLICATE:

The matrix spike/matrix spike duplicate (MS/MSD) sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The matrix spike percent recoveries and relative percent difference (RPD) values must fall within the control limits established in the QAPP. However, spike recovery limits do not apply when the sample concentration is greater than or equal to four times the spike added.

Sample JACKSON-SWMC3-DC-01 was submitted for MS/MSD and/or laboratory duplicate evaluations in association with this SDG. Upon evaluation all precision and accuracy indicators were favorable.

10. SERIAL DILUTION:

The serial dilution determines whether significant physical or chemical interferences exist due to sample matrix. If the analyte concentration is sufficiently high (concentration in the original sample is greater than 50 times the detection limit), the percent difference between the original determination and the serial dilution analysis (a five-fold dilution) after correction for dilution shall be less than 10. For a serial dilution analysis that does not meet the technical criteria, the action was applied to only the field sample used to prepare the serial dilution sample.

Sample JACKSON-SWMC3-DC-01 was submitted for serial dilution analysis. No problems were found for this criterion.

11. INTERNAL STANDARDS PERFORMANCE:

Internal standards were added to all sample and quality assurance evaluation digestates prior to analysis to monitor analytical performance and sample matrix effects.

All samples and associated quality assurance analyses had internal standard percent recoveries within validation acceptance criteria of 30-120%.

12. FIELD DUPLICATES:

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times (5x) the LOQ. A control limit of two times the LOQ shall be used if either the sample or duplicate value is less than 5x the LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the field sample and it's duplicate.

Samples JACKSON-SWMC3-DC-01 and SWDUP were submitted as a field duplicate pair. Adequate field precision was demonstrated.

13. ANALYTE QUANTIFICATION AND REPORTED DETECTION LIMITS:

Analyte quantitation was not verified as part of the Level 2B data validation.

Reported detection limits were evaluated for all samples in the delivery group. In all cases the Limit of Quantitation (LOQ) specified in the QAPP for the analytes reported have been achieved.

14. SYSTEM PERFORMANCE:

No other problems were found.

Table 1 Major and Minor Findings

JACKSON-SWCC2-DC-01	SQ1201-8/ 680-232120-8	surface water	S2BVM

Table 1 provides a summary of the major and minor data quality issues identified in this data set. All data are acceptable except those results which have been qualified with “X”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an "X" flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. "X" values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW:

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION:

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J" or "UJ" as appropriate. When holding times are exceeded by more than twice the time specified, the non-detects will be flagged as unusable, "X". Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion with the following exception. Sample JACKSON-SWCC2-DC-01 was analyzed by the house laboratory 2 days outside of the 14-day holding time for alkalinity due to a receiving error at the subcontract laboratory. The non detected sample result for the impacted analyte has been qualified estimated "UJ" on this basis.

4. CALIBRATION:

Method requirements for satisfactory instrument or procedural calibration are established to ensure that the instrument can produce acceptable quantitative data. Initial calibration verification (ICV) demonstrates that the instrument is capable of acceptable performance at the beginning of the analytical run. Continuing calibration verification (CCV) demonstrates that the initial calibration is still valid by checking the performance of the instrument on a continuing basis.

Immediately after each system has been calibrated, the accuracy of the initial calibration must be verified and documented for each target analyte by the analysis of an ICV solution(s). The CCV standard shall be analyzed at a frequency of every 10 samples. The percent relative standard deviation (%RSD) should be less than 20% or the correlation coefficient greater than 0.995. Qualifications were applied to the samples and analytes as shown below.

Calibrations were performed at the appropriate frequency and resulted in %RSD and correlation coefficient values within guidance in all cases. Further, all ICV and CCV evaluations were within acceptance criteria.

Note: No calibration summaries were available for review for the alkalinity method. Therefore, this criterion was not assessed for alkalinity. The validator used the method blank and LCS data provided to assess accuracy.

5. BLANK CONTAMINATION:

Quality assurance blanks, i.e., instrument, preparation, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Calibration blanks (ICB and CCB) are used to ensure a stable instrument baseline before and during the analysis of analytical samples. Preparation blanks measure laboratory contamination. Field blanks or lab blanks should not have an analyte detection greater than ½ the analyte Limit of Quantitation (LOQ), or one tenth the concentration of associated samples. However, any positive blank result is assessed against all associated field sample results per validation guidance and data are flagged accordingly. Qualifications were applied to the samples and analytes as shown below.

No problems requiring result qualification were found for this criterion.

6. LABORATORY CONTROL SAMPLE:

The Laboratory Control Sample (LCS) serves to monitor the overall performance of each step during the analysis. Aqueous/water and soil/sediment LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control procedures as employed for the samples. All LCS percent recoveries must fall within the control limits of 80-120% for dissolved organic carbon and 90-110% for chloride and sulfate. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

7. MATRIX SPIKE/MATRIX SPIKE DUPLICATE:

The matrix spike/matrix spike duplicate (MS/MSD) sample analysis is designed to provide information about the effect of each sample matrix on the sample preparation procedures and the measurement methodology. The spike percent recovery must fall within the established QAPP acceptance limits of 75-125%, with a relative percent difference between the two of less than 20% for dissolved organic carbon. The spike percent recovery must fall within the established QAPP acceptance limits of 80-120%, with a relative percent difference between the two of less than 15% for chloride and sulfate. However, spike recovery limits do not apply when the sample concentration is greater than or equal to four times the spike added.

Sample JACKSON-SWMC3-DC-01 was submitted for MS/MSD analyses for DOC, chloride, and sulfate in association with this SDG. Upon evaluation all precision and accuracy indicators were acceptable.

8. FIELD DUPLICATES:

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times the LOQ. A control limit of two times the LOQ shall be used if either the sample or duplicate value is less than five times the LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the field sample and its duplicate.

Samples JACKSON-SWMC3-DC-01 and SWDUP were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated with the exception of DOC. Results reported for the impacted analyte in the parent and field duplicate samples have been qualified "J" estimated on this basis.

9. OTHER PROBLEMS:

No problems were found for this criterion.

Table 1 provides a summary of the major and minor data quality issues applied to this data set. All data are acceptable except those results which have been qualified with “X”, rejected. Data validation qualifiers along with associated descriptions are provided in Table 2. All data qualification related to this group of samples is detailed on the attached sheets.

All data users should note two facts. First, an "X" flag means that the associated value is unusable due to significant quality control (QC) problems, the data is invalid and provides no information as to whether the compound is present or not. "X" values should not appear on any data tables even as a last resort. Second, no analyte concentration, even if it passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

DATA ASSESSMENT

1. NARRATIVE AND COMPLETENESS REVIEW:

The case narrative was reviewed, and the data package was checked for completeness. No discrepancies were noted.

2. SAMPLE DELIVERY AND CONDITION:

The samples arrived at the laboratory in acceptable condition. Proper custody was documented.

3. HOLDING TIME:

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J". The non-detect results will be flagged as not detected at an estimated quantitation limit, "UJ", unless the holding time is grossly exceeded (by more than two times the holding time specified), in which case non-detect results are flagged "R", rejected. Qualifications were applied to the samples and analytes as shown below.

All sample analyses were within the validation guidance.

4. CALIBRATION:

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

Mass calibration:

The instrument must have a valid mass calibration prior to any sample analysis.

No problems were found for this criterion.

Percent Relative Standard Deviation and Percent Difference:

Percent relative standard deviation (%RSD) is calculated for the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentration. Percent difference (%D) compares the response factor of the continuing calibration check to the mean RRF from the initial calibration.

Percent RSD must be equal to or less than maximum %RSD of 15 for all target analytes. In cases where linear and non-linear regressions are used, coefficients of determination must be greater than 0.990. For the opening or closing continuing calibration verification (CCV) the %D must be within maximum %D limits of +/- 15% for all target compounds. A value outside of these limits indicates potential detection and quantitation errors. If the %RSD exceeds quality control criteria, detects may be qualified as "J" and professional judgment is used to qualify non-detects. If the %D exceeds quality control criteria, the positive results are flagged as estimated, "J" and non-detects are flagged "UJ". Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

5. INTERFERENCE CHECK SAMPLES:

Interference check samples (ICS) must be analyzed with every group of twenty samples and at least once daily. The observed concentration of the ICS must be within +/- 20% of its true value.

No problems were found for this criterion.

6. BLANK CONTAMINATION:

Quality assurance (QA) blanks, i.e., method, trip, field, or rinse blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field and rinse blanks measure cross-contamination of samples during field operations. Qualifications were applied to the samples and analytes as shown below.

A) Method blank contamination:

No problems were found for this criterion.

B) Instrument blank contamination:

No problems were found for this criterion.

C) Field/Equipment blank contamination:

Samples JACKSON-CB-01 and JACKSON-EB-01 were submitted as container/equipment blanks in association with the samples in this sample delivery group (SDG). No problems were found for this criterion.

7. COMPOUND IDENTIFICATION AND QUANTIFICATION:

Compound Identification

The compounds are identified on the ion chromatograph/mass spectrometer (IC/MS) by using the analytes relative retention time (RRT) and ion spectra. For the results to be a positive hit the sample peak must be within ±0.06 RRT units of the standard compound. Also, the ratio of ions 99 to 101 specifically must be within 2.3 to 3.7. In the cases where there is not an adequate ion spectrum match, the laboratory may have provided false positive identifications.

Target compound identifications were reviewed for samples validated at the Stage 4 level. No anomalies were identified.

Compound Quantification

Target compound result quantitation was reviewed for all samples validated at the Stage 4 level. No anomalies were identified.

8. MATRIX SPIKE/MATRIX SPIKE DUPLICATE RECOVERY:

Matrix spike/matrix spike duplicate (MS/MSD) data is generated to determine the long-term precision and accuracy of the analytical method in various matrices. The MS/MSD data may be used in conjunction with other quality control criteria for additional qualification of data.

Sample JACKSON-SWMC3-DC-01 was submitted for MS/MSD evaluation in association with this SDG. Upon evaluation all precision and accuracy indicators were favorable.

9. INTERNAL STANDARDS PERFORMANCE:

Internal standard performance criteria are meant to ensure that the ion chromatograph/mass spectrometer (IC/MS) sensitivity and response are stable during every experimental run.

The internal standard area count must not vary by more than a factor of two from the associated continuing calibration standard. The retention time of the internal standard must not vary by more than ±30 seconds from the associated continuing calibration standard. The area count must be within a (50-150%) range of the associated standard. If the area count is greater than 200%, non-detected results are not qualified and positive results are flagged as estimated "J-". If the area count is less than 50%, positive results are flagged as estimated "J+" and non-detected results are flagged "UJ". If the area count is less than 20%, positive results are flagged as estimated "J+" and non-detected results will be classified as unusable "R". Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

10. FIELD DUPLICATES:

Field duplicates may be taken and analyzed as an indication of overall precision. These analyses measure both field and laboratory precision. A control limit of 35% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times the LOQ in the case of solid samples. A control limit of 20% for the Relative Percent Difference (RPD) shall be used for original and duplicate sample values greater than or equal to five times the LOQ in the case of liquid samples. A control limit of two times the LOQ shall be used if either the sample or duplicate value is less than five times the LOQ. For field duplicate analyses that do not meet the technical criteria, the action was applied to only the field sample and its duplicate.

Samples JACKSON-SWMC3-DC-01 and SWDUP were submitted as a field duplicate pair in association with this SDG. Adequate field precision was demonstrated.

11. LABORATORY CONTROL SAMPLES:

The Laboratory Control Sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Aqueous/water, soil/sediment, wipe, and filter LCSs shall be analyzed for each analyte utilizing the same sample preparations, analytical methods, and quality assurance/quality control (QA/QC) procedures as employed for the samples. All LCS percent recoveries must fall within the project specific control limits or Department of Defense QSM 5.1. Qualifications were applied to the samples and analytes as shown below.

No problems were found for this criterion.

12. DILUTIONS, RE-EXTRACTIONS & REANALYSIS:

Samples may be re-analyzed for dilution, re-extraction and for other QC reasons. In such cases, the best result values are used.

No dilutions, re-extractions or reanalysis were provided for review.

13. SYSTEM PERFORMANCE:

No other problems were found with system performance.

Table 1 Major and Minor Findings

	Were acceptance criteria met?		
	Yes	No	
Perchlorate		Major	Minor
Holding Time	x		
Calibration	x		
Percent Relative Standard Deviation and Percent Deviation	x		
Interference Check Samples	x		
Internal Standards	x		
Method Blank	x		
Instrument Blank	x		
Equipment/Control Blank	x		
Matrix Spike/Matrix Spike Duplicate	x		
Internal Standards	x		
Field Duplicate	x		
Laboratory Control Samples	x		
Other Quality Control Data out of Specification	x		

Major = Major data quality issue identified resulting in rejection of data.
Minor = Minor data quality issue identified resulting in the qualification of data. Data qualification should be used to inform the data users of data limitations.
NA = Not applicable

Table 2 Data Validation Qualifiers

Data Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Samples Collected: 3/8/23

Preservation: Cooler temp < 6 degrees C ok

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.

All ok

HOLDING TIMES

- ✓ Water and waste samples must be properly preserved (cooled to 4° +/- 2°), and nitro substituted aromatics and amines analysis must be extracted within 7 days of the date of collection. Extracts must be analyzed within 40 days of the date of extraction.
- ✓ Solid samples must be properly preserved (cooled to 4° +/- 2°), and nitro substituted aromatics and amines analysis must be extracted within 14 days of the date of collection. Extracts must be analyzed within 40 days of the date of extraction.

Water Samples ext. 7 days analyzed within 40

Collected: 3/8
Extracted: 3/16
Analyzed: 3/23

SURROGATES

- ✓ The laboratory must evaluate the surrogate data from individual samples versus the surrogate control limits developed by the laboratory. Method 8000C, Sec 9.0 details evaluating surrogate data and updating surrogate limits. If laboratory established recovery limits are not established, use surrogate recovery between 70 - 130% for all samples, including MS, MSDs, LCSs, and all blanks.

QSM Limits 78-119

JACKSON-SDMC1-DC-01 ↓ Q UJ all targets SQ1188-7

✓ Surrogate retention times (RT) must be within the windows established during the initial 5-point analysis.

LABORATORY CONTROL SAMPLE

✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG. Raw data and percent recoveries present for all Laboratory Control samples as required by Method 8000C (section 9.5).

✓ Laboratory Control Samples were analyzed for all the nitroaromatics and nitroamines analytes that the samples are analyzed for.

✓ Did laboratory calculate in-house performance criteria for LCS recoveries according to Method 8000C section 9.7, and were recoveries met? If in house LCS recoveries performance criteria were not generated, the laboratory should use 70 - 130% criteria, and was this criterion met?

NA QSM limits are used all criteria are met.

LCS WG333925-2 Tetryl ↑ all ND no Q

MS/MSD

JACKSON-SDMC3-DC-01 SQ1188-5

	MS	MSD	RPD
All	ok	ok	out

✓ The Matrix Spike Samples were spiked and analyzed for all the nitroaromatics and nitroamines analytes that the samples are analyzed for (Same analytes as LCS).

✓ QSM 5.1 limits are used for %R all criteria are met. Exceptions if any are above
✓ Per QAPP RPD < 20% all met

BLANKS

- ✓ Frequency of Analysis: reagent blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.

  Method Blank:

  WG333925-1 all ND

- ✓ The chromatographic performance (baseline stability) for each instrument is acceptable for nitroaromatics and nitroamines.

- ✓ Method/instrument/reagent/cleanup blanks do not have positive results for nitroaromatics or nitroamines.

  Note when necessary, the contaminant concentration in these blanks are multiplied by the sample Dilution Factor and corrected for % moisture when necessary.

  ✓ Field/rinse blanks are not positive nitroaromatics or nitroamines.
  sample was submitted as field/equipment blanks in association with the surface water or sediment samples in this sample delivery group (SDG).

  none

  NOTE: All field blank results associated to a particular group of samples (may exceed one per case or one per day) may be used to qualify data. Blanks may not be qualified because of contamination in another blank. Field blanks must be qualified for surrogate, or calibration QC problems.

  NOTE: If gross blank contamination exists (e.g., saturated peaks, hump-o-grams, junk peaks), all affected positive compounds in the associated samples should be qualified as unusable "R", due to interference. Non-detected pesticide target compounds do not require qualification unless the contamination is so high that it interferes with the analyses of non-detected compounds.

  ✓ Field/rinse/equipment blanks are not associated with every sample.

  ACTION: For low level samples, note in data assessment that there is no associated field/rinse/ equipment blank. Exception: samples taken from a drinking water tap do not have associated field blanks.

ICAL

✓ Data summary forms (containing calibration factors or response factors) for the initial 5 pt. calibration and daily calibration verification standards are present and complete for each column and each analytical sequence.

NOTE: External standard calibration procedures are used (Method 8000C (section 11.4.2), therefore calibration factors must be used.

ALL SAMPLES WERE INITIALLY ANALYZED ON THE PRIMARY PHENOMENEX COLUMN

INST HPLC02 PHENOMENEX
ICAL 3/15 all samples all ok
ICV 3/15 WG333590-8 all ok

INST HPLC04 ACCLAIM E2
N/A

✓ No transcription/calculation errors between raw data and data summary forms.

✓ Standard retention time (RT) windows for each nitroaromatics and nitroamine peak of interest are presented on modified CLP summary forms.

No retention time windows were provided

ACTION: If any data are missing, or it cannot be determined how RT windows were calculated, call the lab for explanation/resubmittals. Note any problems in the data assessment.

NOTE: Retention time windows for all nitroaromatics and nitroamines are established using retention times from three calibration standards analyzed during the entire analytical sequence (Method 8000C section 11.6).

✓ All standard retention times in each level of the initial 5 pt. calibrations for nitroaromatics and nitroamines fall within the windows established during the initial calibration sequence

✓ Linearity criteria for the initial calibration standards has been satisfied for both columns. (% RSD for the calibration factors (CFs)must be < 20.0% or coeff of determination >0.990 for all analytes)

CCAL

✓ Calibration verification/continuing calibration standard contain the nitroaromatics or nitroamines peaks of interest, analyzed on each working day, prior to sample analyses.

✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence

✓ Percent difference (%D) between the Calibration Factor (CF) of the peaks used to identify the nitroaromatics and nitroamines in the CCV and the CF from these peaks in the initial calibration do not exceed 20%.

✓ Continuing calibration blank or PIBLK been analyzed after every 10 samples and at the end of each analytical sequence not detected above MDL for all targets.

No CCBs or PIBLKs were analyzed

INST HPLC02 PHENOMENEX

CCV	3/23	WG334249-1	all ok
		Tetryl out	Q UJ
	3/23	WG334249-2	all ok
		Tetryl out	Q UJ

INST HPLC04 ACCLAIM E2
N/A

All ok unless noted above

✓ New 5 pt. initial calibration curve been generated for those nitroaromatics and nitroamines analytes which failed in the calibration verification/continuing calibration standard (8000C, section 11.7.3), and all samples which followed the out-of-control calibration verification/standard continuing calibration standard.

✓ Retention time (RT) windows have been properly calculated for each analyte of interest (Method 8000C, section 11.6), using RTs from the associated calibration verification/continuing standard.

✓ All standard retention times for each calibration verification/continuing calibration standard fall within the windows established during the initial calibration sequence.

✓ All standard retention times for each mid-concentration standard (analyzed after

every 10 samples) fall within the daily RT windows.

✓ No transcription/calculation errors between raw data and data summary forms (initial calibration summaries, calibration verification summaries, analytical sequence summaries. ok

ACTION: If large errors exist, call lab for explanation/resubmittal, make necessary corrections and note error in the data assessment.

%RPD BETWEEN DUAL COL RESULTS

✓ CLP Form X or equivalent, showing retention time data for positive results on the two HPLC columns, been completed for every sample in which a nitroaromatics or nitramines was Detected.

✓ Retention times (RT) of sample compounds within the established RT windows for both columns/analyses.

ACTION: Qualify as unusable (R) all positive results which were not confirmed by second HPLC column analysis. Also qualify "R", unusable, all positive results not within RT windows unless associated standard compounds are similarly biased. The reviewer should use professional judgement to assign an appropriate quantitation limit.

✓ Check chromatograms for false negatives, especially if RT windows on each column were established differently.

No false negatives.

ACTION: Use professional judgement to decide if the compound should be reported. If there is reason to believe that peaks outside retention RT windows should be reported, make corrections to data summary forms (Form I) and note in data assessment.

✓ Percent difference (%D) calculated for the positive sample results on the two HPLC columns<40.0%.

Exceptions:

None

NOTE: The method requires quantitation from one column. The second column is to confirm the presence of an analyte. It is the reviewer's responsibility to verify from the project plan what the lab was required to report. If the lab was required to report concentrations from both columns, continue with validation for % Difference. If

required, but not reported, either contact the lab for results or calculate the concentrations from the calibration. If not required, skip this section. Document actions in Data Assessment.

ACTION: If the reviewer finds neither column shows interference for the positive hits, the data should be qualified as follows:

% Difference Qualifier
0-40% none
41-70% "J"
71-100% "NJ"
101-200% (No Interference) "R"
101-200% (Interference detected) "NJ"
>50% (Analyte value is <CRQL) "U"
>200% R

Note: The lower of the two values is reported on Form I. If using professional judgement, the reviewer determines that the higher result was more acceptable, the reviewer should replace the value and indicate the reason for the change in the data assessment.

Table 20. Spike Sample Actions for ICP-MS Analysis

Criteria	Action	
	Detect	Non-detect
Matrix Spike %R < 30% Post-digestion spike %R < 75%	J-	R
Matrix Spike %R < 30% Post-digestion spike %R ≥ 75%	J	UJ
Matrix Spike %R 30-74% Post-digestion spike %R < 75%	J-	UJ
Matrix Spike %R 30-74% Post-digestion spike %R ≥ 75%	J	UJ
Matrix Spike %R > 125% Post-digestion spike %R > 125%	J+	No qualification
Matrix Spike %R > 125% Post-digestion spike %R ≤ 125%	J	No qualification
Matrix Spike %R < 30% No post-digestion spike performed	J-	R
Matrix Spike %R 30-74% No post-digestion spike performed	J-	UJ
Matrix Spike %R 75-125% No post-digestion spike is required	No qualification	No qualification
Matrix Spike %R > 125% No post-digestion spike performed	J+	No qualification

NOTE: The above control limits are **method requirements** for spike samples, regardless of the sample matrix type. However, it should be noted that laboratory variability arising from the sub-sampling of non-homogenous soil samples is a common occurrence. Therefore, for **technical review purposes only**, EPA Regional policy or project DQOs may allow the use of less restrictive criteria (e.g., 10 %R and 150 %R for the lower and upper limits) to be assessed against spike and post-digestion spike soil samples.

(a) PALs refer to the lower of the US EPA Region 4 Freshwater Sediment Screening Values (2015) and the US EPA Region 3 Freshwater Sediment Screening Benchmarks (BTAG) (August 2006). Any applicable state standards may supersede the values shown and will be presented in the SSQAPP.
(b) Analytes with NA for PAL have PQL set at the Achievable Laboratory LOQ.
(c) PQLs are set to one-tenth the PAL, if achievable. If not achievable, the PQLs are set to at least one-third the PAL. Analytes shaded under PQLs are not achievable at three times less than the PAL.

Notes:
µg/L = Microgram(s) per liter
µmol/g = Micromole(s) per gram
AVS = Acid volatile sulfides
CAS = Chemical Abstracts Service
DL = Detection Limit
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = Milligram(s) per kilogram
NA = Not applicable
PAL = Project Action Limit
PQL = Project Quantitation Limit
SEM = Simultaneously extracted metals

Reviewer:	DLW
Review Date:	4/19/2023
Method:	AVS USEPA 821/R-91-100

Date Collected:	3/8/2023
Date of Analysis:	3/21/2023

Data Completeness and Deliverables

Have any missing deliverable been recieved and added to the data package?
ACTION: Call lab for explanation/resubmittal of any missing deliverables. If the lab cannot probive them, note the effect on review of the data in the non-compliance section of the data assessment narrative.

☐ Yes ☑ No

Notes and validation action:

Custody Documents and Narratives

Are chains of custody present and complete for all samples?

☑ Yes ☐ No

ACTION: Contract lab for replacement of missing documents.

Do chains of custody or lab narratives indicate any problems with sample receipt, condition of samples, analytical problems or special notations affecting the quality of the data?

☑ Yes ☐ No

Notes and validation action:

Temperature:

Sample coolers received @ 4 +/- 2 ℃ ?

☑ Yes ☐ No

Preservation: No indication of head space in sample receipt documentation or case narrative?

☑ Yes ☐ No

ACTION: Samples improperly preserved shall be noted in the data validation report. Professional judgement may result in the results of an analysis of an improperly preserved sample by the laboratory being qualified as estimated "J" or "UJ".

ACTION: If samples were not iced upon receipt, flag all positive results as estimated, an all non-detects “UJ”.

Notes on validation:

Holding Time

Does the holding time exceed 14 days to extraction? 40 days to analysis?

☐ Yes ☑ No

ACTION: If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J" or “UJ” as appropriate. When holding times are exceeded by more than twice the time specified, the non-detects will be flagged as unusable, "R”.

Notes and validation action:

Calibration Verification

Are raw data and summary sheets present for both inital and continuing calibrations? ☑ Yes ☐ No

At least 5 standards and a blank?

Correlation coeff > 0.995?

Are the %D values between 85-115%?
Per QAPP: ICV/CCV 80-120%

ACTION: If the ICV or CCV fail - if possible, indicate bias in the validation report and qualify affected data

Notes and validation action:

ICAL 3/21/2023	corr coeff OK
ICV	ok
CCV	ok
CCB	ok
samples 2,4,6,8,10,12	
CCV	ok
CCB	ok
samples 14,16	
CCV	ok
CCB	ok

Blanks

Has a method blank analysis been reported per twenty samples of a similar matrix or concentration level, and for each extraction batch? ☑ Yes ☐ No

Upon examination of laboratory and field blank data, do any blanks contain positive results? ☐ Yes ☑ No
ACTION: If yes, qualify associated results as follows: If the sample result is greater than the laboratory reporting limit but less than 5 times the blank concentration, flag sample result as non-detect ("U"). If the sample result is reported as detected at a concentration less than the reporting limit and less than 5 times the blank concentration, qualify the sample result as non-detectable at the laboratory reporting limit. For aqueous blanks applied to soil/sediment samples, compare the sample result to the equivalent concentration of the blank.

Are there field/rinse/equipment blanks associated with every sample? ☐ Yes ☑ No

Notes and validation action:

blank	positives	Flag	assocated samples
WG334165	ND		

Matrix Spike

Is a matrix spike/matrix spike duplicate summary present? ☑ Yes ☐ No

ACTION: If any matrix spike data are missing, call the lab for explanation/re-submittal. If information is not available, document the effect in narrative notes.

Notes and validation action: sample run as MS/DU pair ☑ Yes ☐ No

Sample	MS %R	MSD %R	RPD	Flag	
SQ1188-8	42%↓	n/a	n/a	sample result ND, Q UJ	SDDUP

Laboratory Duplicate

Is a laboratory duplicate summary present? ☑ Yes ☐ No

Are the RPDs within the control limit or +/- 20%? ☑ Yes ☐ No

Notes and validation action:

Sample	RPD
SQ1188-8	ok

Laboratory Control Sample

Were LCS samples evaluated with each batch of 20 samples or less and were observed percent recoveries within the laboratory defined limits?
Used lab limits used 50-120%

☑ Yes ☐ No

Notes and validation action:

LCS or LCSD	%R	Flag	Associated samples:
WG334165-2	ok		

Field Duplicates

Were field duplicates submitted for AVS analysis?

ACTION: For field duplicate analyses that do not meet the technical criteria, apply action to only the parent sample and its duplicate.

☑ Yes ☐ No

Notes and validation action:

JACKSON-SDMC3-DC-01 and SDDUP

all ok see FD worksheet

Review Level

Is a level 4 review required for this project?

☐ Yes ☑ No

List samples reviewed and bold samples used for calculations:
Level 2B for this SDG

As part of the data validation process, the following validation qualifiers and their meanings will be used:

"U" - Non-Detect – The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

"J" - Estimated Value – The analyte was positively identified; but the associated numerical value is the approximate concentration of the analyte in the sample.

"NJ" - The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

"UJ" - Estimated Non-Detect – The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

"X" - The sample results are rejected. Due to significant QA/QC problems the analysis is invalid and provides no information as to whether the analyte is present or not. Once the data are flagged with "X", any further review or consideration is unnecessary.

If no determination of the overall bias of a result qualified as estimated can be made, the result will be flagged with "J". If the data reviewer can determine the overall bias for sample data qualified as estimated, the data reviewer will qualify the sampl e result as either an estimated minimum value (JL) or an estimated maximum value (JH).

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data.

All ok

HOLDING TIMES

- ✓ Water and waste samples must be properly preserved (cooled to 4° +/- 2°), and nitro substituted aromatics and amines analysis must be extracted within 7 days of the date of collection. Extracts must be analyzed within 40 days of the date of extraction.
- ✓ Solid samples must be properly preserved (cooled to 4° +/- 2°), and nitro substituted aromatics and amines analysis must be extracted within 14 days of the date of collection. Extracts must be analyzed within 40 days of the date of extraction.

Water Samples ext. 7 days analyzed within 40

Collected: 3/8
Extracted: 3/14
Analyzed: 3/17

SURROGATES

- ✓ The laboratory must evaluate the surrogate data from individual samples versus the surrogate control limits developed by the laboratory. Method 8000C, Sec 9.0 details evaluating surrogate data and updating surrogate limits. If laboratory established recovery limits are not established, use surrogate recovery between 70 - 130% for all samples, including MS, MSDs, LCSs, and all blanks.

QSM Limits 78-119 solid, 83-119 aqueous

JACKSON-SWJC1-DC-01	↓	Q UJ	all targets	SQ1201-4

- ✓ Surrogate retention times (RT) must be within the windows established during the initial 5-point analysis.

LABORATORY CONTROL SAMPLE

- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG. Raw data and percent recoveries present for all Laboratory Control samples as required by Method 8000C (section 9.5).

- ✓ Laboratory Control Samples were analyzed for all the nitroaromatics and nitroamines analytes that the samples are analyzed for.

- ✓ Did laboratory calculate in-house performance criteria for LCS recoveries according to Method 8000C section 9.7, and were recoveries met? If in house LCS recoveries performance criteria were not generated, the laboratory should use 70 - 130% criteria, and was this criterion met?

NA QSM limits are used all criteria are met.

LCS	WG333823-2	Tetryl	↑	all ND no Q

MS/MSD

JACKSON-SWMC3-DC-01			SQ1201-2	
	MS	MSD	RPD	
Tetryl	↑	↑	ok	ND no Q

- ✓ The Matrix Spike Samples were spiked and analyzed for all the nitroaromatics and nitroamines analytes that the samples are analyzed for (Same analytes as LCS).

- ✓ QSM 5.1 limits are used for %R all criteria are met. Exceptions if any are above
- ✓ Per QAPP RPD < 20% all met

BLANKS

- ✓ Frequency of Analysis: reagent blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.

  Method Blank:

  WG333823-1 all ND

- ✓ The chromatographic performance (baseline stability) for each instrument is acceptable for nitroaromatics and nitroamines.

- ✓ Method/instrument/reagent/cleanup blanks do not have positive results for nitroaromatics or nitroamines.

  Note when necessary, the contaminant concentration in these blanks are multiplied by the sample Dilution Factor and corrected for % moisture when necessary.

  ✓ Field/rinse blanks are not positive nitroaromatics or nitroamines.
  sample was submitted as field/equipment blanks in association with the surface water or sediment samples in this sample delivery group (SDG).

  JACKSON-EB-01 All ND
  JACKSON-CB-01 All ND

  NOTE: All field blank results associated to a particular group of samples (may exceed one per case or one per day) may be used to qualify data. Blanks may not be qualified because of contamination in another blank. Field blanks must be qualified for surrogate, or calibration QC problems.

  NOTE: If gross blank contamination exists (e.g., saturated peaks, hump-o-grams, junk peaks), all affected positive compounds in the associated samples should be qualified as unusable "R", due to interference. Non-detected pesticide target compounds do not require qualification unless the contamination is so high that it interferes with the analyses of non-detected compounds.

  ✓ Field/rinse/equipment blanks are not associated with every sample.

  ACTION: For low level samples, note in data assessment that there is no associated field/rinse/ equipment blank. Exception: samples taken from a drinking water tap do not have associated field blanks.

ICAL

✓ Data summary forms (containing calibration factors or response factors) for the initial 5 pt. calibration and daily calibration verification standards are present and complete for each column and each analytical sequence.

NOTE: External standard calibration procedures are used (Method 8000C (section 11.4.2), therefore calibration factors must be used.

ALL SAMPLES WERE INITIALLY ANALYZED ON THE PRIMARY PHENOMENEX COLUMN

ICAL 3/21 all ok
ICV 3/21 WG334216-8 all ok

INST HPLC04 ACCLAIM E2
N/A

✓ No transcription/calculation errors between raw data and data summary forms.

✓ Standard retention time (RT) windows for each nitroaromatics and nitroamine peak of interest are presented on modified CLP summary forms.

No retention time windows were provided

ACTION: If any data are missing, or it cannot be determined how RT windows were calculated, call the lab for explanation/resubmittals. Note any problems in the data assessment.

NOTE: Retention time windows for all nitroaromatics and nitroamines are established using retention times from three calibration standards analyzed during the entire analytical sequence (Method 8000C section 11.6).

✓ All standard retention times in each level of the initial 5 pt. calibrations for nitroaromatics and nitroamines fall within the windows established during the initial calibration sequence

✓ Linearity criteria for the initial calibration standards has been satisfied for both columns.

(% RSD for the calibration factors (CFs)must be < 20.0% or coeff of determination >0.990 for all analytes)

CCAL

✓ Calibration verification/continuing calibration standard contain the nitroaromatics or nitroamines peaks of interest, analyzed on each working day, prior to sample analyses.

✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence

✓ Percent difference (%D) between the Calibration Factor (CF) of the peaks used to identify the nitroaromatics and nitroamines in the CCV and the CF from these peaks in the initial calibration do not exceed 20%.

✓ Continuing calibration blank or PIBLK been analyzed after every 10 samples and at the end of each analytical sequence not detected above MDL for all targets.

No CCBs or PIBLKs were analyzed

INST HPLC02 PHENOMENEX
CCV 3/17 WG333979-1
3/17 WG333979-2
3/18 WG333979-3
3/22 WG334216-9

INST HPLC04 ACCLAIM E2
N/A

All ok unless noted above

✓ New 5 pt. initial calibration curve been generated for those nitroaromatics and nitroamines analytes which failed in the calibration verification/continuing calibration standard (8000C, section 11.7.3), and all samples which followed the out-of-control calibration verification/standard continuing calibration standard.

✓ Retention time (RT) windows have been properly calculated for each analyte of interest (Method 8000C, section 11.6), using RTs from the associated calibration verification/continuing standard.

✓ All standard retention times for each calibration verification/continuing calibration standard fall within the windows established during the initial calibration sequence.

✓ All standard retention times for each mid-concentration standard (analyzed after every 10 samples) fall within the daily RT windows.

✓ No transcription/calculation errors between raw data and data summary forms (initial calibration summaries, calibration verification summaries, analytical sequence summaries.

ACTION: If large errors exist, call lab for explanation/resubmittal, make necessary corrections and note error in the data assessment.

%RPD BETWEEN DUAL COL RESULTS

✓ CLP Form X or equivalent, showing retention time data for positive results on the two HPLC columns, been completed for every sample in which a nitroaromatics or nitramines was Detected.

✓ Retention times (RT) of sample compounds within the established RT windows for both columns/analyses.

ACTION: Qualify as unusable (R) all positive results which were not confirmed by second HPLC column analysis. Also qualify "R", unusable, all positive results not within RT windows unless associated standard compounds are similarly biased. The reviewer should use professional judgement to assign an appropriate quantitation limit.

✓ Check chromatograms for false negatives, especially if RT windows on each column were established differently.

No false negatives.

ACTION: Use professional judgement to decide if the compound should be reported. If there is reason to believe that peaks outside retention RT windows should be reported, make corrections to data summary forms (Form I) and note in data assessment.

✓ Percent difference (%D) calculated for the positive sample results on the two HPLC columns<40.0%.

Exceptions:

None

NOTE: The method requires quantitation from one column. The second column is to confirm the presence of an analyte. It is the reviewer's responsibility to verify from the project plan what the lab was required to report. If the lab was required to report concentrations from both columns, continue with validation for % Difference. If required, but not reported, either contact the lab for results or calculate the concentrations from the calibration. If not required, skip this section. Document actions in Data Assessment.

ACTION: If the reviewer finds neither column shows interference for the positive hits, the data should be qualified as follows:

% Difference Qualifier
0-40% none
41-70% "J"
71-100% "NJ"
101-200% (No Interference) "R"
101-200% (Interference detected) "NJ"
>50% (Analyte value is <CRQL) "U"
>200% R

Note: The lower of the two values is reported on Form I. If using professional judgement, the reviewer determines that the higher result was more acceptable, the reviewer should replace the value and indicate the reason for the change in the data assessment.

Table 20. Spike Sample Actions for ICP-MS Analysis

Criteria	Action	
	Detect	Non-detect
Matrix Spike %R < 30% Post-digestion spike %R < 75%	J-	R
Matrix Spike %R < 30% Post-digestion spike %R ≥ 75%	J	UJ
Matrix Spike %R 30-74% Post-digestion spike %R < 75%	J-	UJ
Matrix Spike %R 30-74% Post-digestion spike %R ≥ 75%	J	UJ
Matrix Spike %R > 125% Post-digestion spike %R > 125%	J+	No qualification
Matrix Spike %R > 125% Post-digestion spike %R ≤ 125%	J	No qualification
Matrix Spike %R < 30% No post-digestion spike performed	J-	R
Matrix Spike %R 30-74% No post-digestion spike performed	J-	UJ
Matrix Spike %R 75-125% No post-digestion spike is required	No qualification	No qualification
Matrix Spike %R > 125% No post-digestion spike performed	J+	No qualification

NOTE: The above control limits are **method requirements** for spike samples, regardless of the sample matrix type. However, it should be noted that laboratory variability arising from the sub-sampling of non-homogenous soil samples is a common occurrence. Therefore, for **technical review purposes only**, EPA Regional policy or project DQOs may allow the use of less restrictive criteria (e.g., 10 %R and 150 %R for the lower and upper limits) to be assessed against spike and post-digestion spike soil samples.

(a) PALs refer to the lower of the US EPA Region 4 Freshwater Sediment Screening Values (2015) and the US EPA Region 3 Freshwater Sediment Screening Benchmarks (BTAG) (August 2006). Any applicable state standards may supersede the values shown and will be presented in the SSQAPP.
(b) Analytes with NA for PAL have PQL set at the Achievable Laboratory LOQ.
(c) PQLs are set to one-tenth the PAL, if achievable. If not achievable, the PQLs are set to at least one-third the PAL. Analytes shaded under PQLs are not achievable at three times less than the PAL.

Notes:
µg/L = Microgram(s) per liter.
µmol/g = Micromole(s) per gram.
AVS = Acid volatile sulfides.
CAS = Chemical Abstracts Service.
DL = Detection Limit.
LOD = Limit of Detection.
LOQ = Limit of Quantitation.
mg/kg = Milligram(s) per kilogram.
NA = Not applicable.
PAL = Project Action Limit.
PQL = Project Quantitation Limit.
SEM = Simultaneously extracted metals.

Data Completeness and Deliverables

Have any missing deliverable been recieved and added to the data package?
ACTION: Call lab for explanation/resubmittal of any missing deliverables. If the lab cannot probive them, note the effect on review of the data in the non-compliance section of the data assessment narrative.

☐ Yes ☑ No

Notes and validation action:

Custody Documents and Narratives

Are chains of custody present and complete for all samples?

ACTION: Contract lab for replacement of missing documents.

☑ Yes ☐ No

Do chains of custody or lab narratives indicate any problems with sample receipt, condition of samples, analytical problems or special notations affecting the quality of the data?

☑ Yes ☐ No

Notes and validation action: Sample SQ1201-8 (JACKSON-SWCC2-DC-01)was not received by the sub lab for alkalinity and was 2 days outside of hold time by the time it was analyzed in house. All other samples were received and analyzed by Eurofins Savannah within hold.

Temperature:

Sample coolers received @ 0-6 ℃ ?

☐ Yes ☑ No

Preservation:

none required

☑ Yes ☐ No

ACTION: Samples improperly preserved shall be noted in the data validation report. Professional judgement may result in the results of an analysis of an improperly preserved sample by the laboratory being qualified as estimated "J" or "UJ".

ACTION: If samples were not iced upon receipt, flag all positive results as estimated, an all non-detects "UJ".

Notes and validation action:

Holding Time

Does the holding time exceed 14 days?

☑ Yes ☐ No

ACTION: If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J" or "UJ" as appropriate. When holding times are exceeded by more than twice the time specified, the non-detects will be flagged as unusable, "R".

Notes and validation action: Sample SQ1201-8 (JACKSON-SWCC2-DC-01) was analyzed 2 days outside of hold due to receiving error at the sub lab. The sample result was ND, Q UJ

Calibration Verification

Are raw data and summary sheets present for both inital and continuing calibrations? ☐ Yes ☑ No

At least 7 standards and a blank?

Correlation coeff > 0.995?

Are the %D values between 90-110%? ☑ Yes ☐ No

Notes and validation action: ICAL date/ time and slope present from Katahdin and Eurofins Savannah. # of standards and corr coeff not confirmed; all CCV %D acceptable at Katahdin. Insufficient CCV data submitted from Eurofins Savannah, could not evaluate.

Blanks

Has a method blank analysis been reported per twenty samples of a similar matrix or concentration level, and for each extraction batch? ☑ Yes ☐ No

Upon examination of laboratory and field blank data, do any blanks contain positive results? ☑ Yes ☐ No
ACTION: If yes, qualify associated results as follows: If the sample result is greater than the laboratory reporting limit but less than 5 times the blank concentration, flag sample result as non-detect ("U"). If the sample result is reported as detected at a concentration less than the reporting limit and less than 5 times the blank concentration, qualify the sample result as non-detectable at the laboratory reporting limit. For aqueous blanks applied to soil/sediment samples, compare the sample result to the equivalent concentration of the blank.

Are there field/rinse/equipment blanks associated with every sample? ☐ Yes ☑ No

Notes and validation action:

blank	positives	Flag	associated samples
MB 680-769235/4	ND		samples 1-7
WG334311	2.4 J	sample result ND, no Q	sample 8

all provided CCBs ND

Matrix Spike

Is a matrix spike/matrix spike duplicate summary present?

☐ Yes ☑ No

ACTION: If any matrix spike data are missing, call the lab for explanation/re-submittal. If information is not available, document the effect in narrative notes.

Are all matrix spike and/or matrix spike duplicate %Rs or RPDs within acceptance range? 75-125%?

☐ Yes ☐ No

Notes and validation action:

Sample	MS %R	MSD %R	RPD	Flag
None				

Laboratory Duplicate

Is a laboratory duplicate summary present?

☐ Yes ☑ No

Are the RPDs within the control limit?
Per QAPP RPD ≤ 20%

☐ Yes ☐ No

Notes and validation action:

None

Laboratory Control Sample

Were LCS samples evaluated with each batch of 20 samples or less and were observed percent recoveries within the laboratory defined limits? 80-120% ?

☑ Yes ☐ No

Notes and validation action:

LCS or LCSD	80-120	Flag	Associated samples:	
LCS WG334311-2	ok		sample 8	
LCSD WG334311-3	ok		sample 8	RPD ok
LCS 680-769235/6	ok		samples 1-7	

Field Duplicates

Were field duplicates submitted for alkalinity analysis?

ACTION: For field duplicate analyses that do not meet the technical criteria, apply action to only the parent sample and its duplicate.

☑ Yes ☐ No

Notes and validation action:
JACKSON-SWMC3-DC-01 and SWDUP; all ok see FD worksheet

Review Level

☐ Yes ☑ No

List samples reviewed and bold samples used for calculations:
this SDG Level 2B

As part of the data validation process, the following validation qualifiers and their meanings will be used:

“U” - Non-Detect – The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

“J” - Estimated Value – The analyte was positively identified; but the associated numerical value is the approximate concentration of the analyte in the sample.

“NJ” - The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

“UJ” - Estimated Non-Detect – The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

“X” - The sample results are rejected. Due to significant QA/QC problems the analysis is invalid and provides no information as to whether the analyte is present or not. Once the data are flagged with “X”, any further review or consideration is unnecessary.

If no determination of the overall bias of a result qualified as estimated can be made, the result will be flagged with “J”. If the data reviewer can determine the overall bias for sample data qualified as estimated, the data reviewer will qualify the sample result as either an estimated minimum value (JL) or an estimated maximum value (JH).

Data Completeness and Deliverables

Have any missing deliverable been recieved and added to the data package?

☐ Yes ☑ No

ACTION: Call lab for explanation/resubmittal of any missing deliverables. If the lab cannot probive them, note the effect on review of the data in the non-compliance section of the data assessment narrative.

Notes and validation action:

Custody Documents and Narratives

Are chains of custody present and complete for all samples?

☑ Yes ☐ No

ACTION: Contract lab for replacement of missing documents.

Do chains of custody or lab narratives indicate any problems with sample receipt, condition of samples, analytical problems or special notations affecting the quality of the data?

☐ Yes ☑ No

ACTION: If samples were not iced upon receipt, flag all positive results as estimated, an all non-detects “UJ”.

Notes and validation action:

Temperature:

Sample coolers received @ 0-6 ℃ ?

Preservation: none required

ACTION: Samples improperly preserved shall be noted in the data validation report. Professional judgement may result in the results of an analysis of an improperly preserved sample by the laboratory being qualified as estimated "J" or "UJ".

☑ Yes ☐ No

☐ Yes ☐ No

Notes and validation action:

Holding Time

Does the holding time exceed 28 days?
(nitrate, nitrite and phosphate - 48 hours per method 9056)
ACTION: If the specified holding time is exceeded, the data may not be valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimated, "J" or “UJ” as appropriate. When holding times are exceeded by more than twice the time specified, the non-detects will be flagged as unusable, "R”.

☐ Yes ☑ No

Notes and validation action:

Initial/Continuing Calibration Verification

Are raw data and summary sheets present for both inital and continuing calibrations?

☑ Yes ☐ No

All ICV and CCVs performed initially and evry ten samples thereafter?

At least 3 standards and a calibration blank?

☑ Yes ☐ No

Correlation coeff > 0.99?

Per QAPP: R must be >0.995

☑ Yes ☐ No

All ICV and CCV % recoveries between 90-110%?
ACTION: If the ICV or CCV fail - if possible, indicate bias in the validation report and qualify affected data. 75-89% - J/UJ; 111-125% - J; 75-89%; <75% use professional judgement.

☑ Yes ☐ No

Chloride and Sulfate:					
SQ1201-2	ok	ok	ok	none	JACKSON-SWMC3-DC-01

Laboratory Duplicate

Is a laboratory duplicate summary present for each prep batch not to exceed 20 samples?

☐ Yes ☑ No

Are the RPDs within the control limit or +/- 20%?

☐ Yes ☐ No

ACTION: If duplicate analytical results for a particular analyte are outside the appropriate control windows, qualify the results for that analyte in all associated samples of the same sample matrix as estimated "J". Non-detects are not qualified.

Notes and validation action: none

Laboratory Control Sample

Were LCS samples evaluated with each batch of 20 samples or less and were observed percent recoveries within the laboratory defined limits of (80-120%)?

☑ Yes ☐ No

ACTION: If LCS %R fall outside the control limits, qualify all sample results greater than the IDL as estimated "J". If the LCS results exceed the control limits, and the sample results are less than the IDL, the results are acceptable. If the LCS results are lower than the control limits, then qualify all sample results less than the IDL as estimated "UJ".

Per QAPP: LCS %R 90-110

Notes and validation action:

LCS or LCSD	%R	Flag	Associated samples:
Chloride and Sulfate:			
WG334130-2	ok		

Field Duplicates

Were field duplicates submitted for anion analysis?

☑ Yes ☐ No

ACTION: For field duplicate analyses that do not meet the technical criteria, apply action to only the parent sample and its duplicate.

Notes and validation action:

JACKSON-SWMC3-DC-01 and SWDUP

all ok see FD worksheet

Were all sample results lower than the highest calibration standard? **ACTION:** If no, list impacted samples below.	☑ Yes	☐ No

Notes and validation action:

Review Level ***Is a level 4 review required for this project?***	☐ Yes	☑ No

List samples reviewed and bold samples used for calculations:
this SDG Level 2B

As part of the data validation process, the following validation qualifiers and their meanings will be used:

“U” - Non-Detect – The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

“J” - Estimated Value – The analyte was positively identified; but the associated numerical value is the approximate concentration of the analyte in the sample.

“NJ” - The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

“UJ” - Estimated Non-Detect – The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

“X” - The sample results are rejected. Due to significant QA/QC problems the analysis is invalid and provides no information as to whether the analyte is present or not. Once the data are flagged with “X”, any further review or consideration is unnecessary.

If no determination of the overall bias of a result qualified as estimated can be made, the result will be flagged with “J”. If the data reviewer can determine the overall bias for sample data qualified as estimated, the data reviewer will qualify the sample result as either an estimated minimum value (JL) or an estimated maximum value (JH).

Samples Collected: 3/8/2023

Preservation: Cooler temp < 6 degrees C

SAMPLE RECEIPT AND CASE NARRATIVE REVIEW

- ✓ Traffic reports, chain-of-custody forms or SDG narrative do not indicate any problems with sample receipt, condition of the samples, analytical problems or special circumstances affecting the quality of the data. ok

HOLDING TIMES

- ✓ Water and solid samples must be properly preserved (cooled to 4° +/- 2°), all analyses performed within 28 days of collection.
  Collected: 3/8
  Analyzed: 3/22

INTERNAL STANDARDS

- ✓ Addition of 18O-labeled perchlorate to every sample, batch QC sample, standard, instrument blank, and Method Blank. Measured 18O IS area within ± 50% of the value from the average of the IS area counts of the ICAL. Ok

Level 4 only

- ✓ RRT of the perchlorate ion must be 1.0 ± 2% (0.98 – 1.02). ok

LABORATORY CONTROL SAMPLE

- ✓ LCS prepared, extracted, analyzed, and reported once for every 20 field samples of a similar matrix, per SDG. Raw data and percent recoveries present for all Laboratory Control samples as required by Method 8000C (section 9.5).

- ✓ Laboratory Control Samples were analyzed for all the analytes that the samples are analyzed for.

- ✓ Did laboratory calculate in-house performance criteria for LCS recoveries according to Method 8000C section 9.7, and were recoveries met? If in house LCS recoveries performance criteria were not generated, the laboratory should use 70 - 130% criteria, and was this criteria met?
  QSM 5.1 limits are used all criteria are met. (84-121) solid (84-119) liquid

  LCS 280-606020/56 ok

MS/MSD

JACKSON-SWMC3-DC-01 280-173651-2 All ok

- ✓ QSM 5.1 limits are used for %R all criteria are met. (84-121) solid (84-119) liquid
- ✓ Per QSM 5.1 RPD < 15% all met

BLANKS

- ✓ Frequency of Analysis: reagent blank has been analyzed for every 20 (or less) samples of similar matrix or concentration or each extraction batch.

  MB 280-606020/55 ND
  CCBs all ND

  Equipment & Control Blanks
  JACKSON-CB-01 ND
  JACKSON-EB-01 ND

Level 4 only

- ✓ The chromatographic performance (baseline stability) for each instrument is acceptable.

- ✓ Method/instrument/reagent/cleanup blanks do not have positive results.

  Note when necessary, the contaminant concentration in these blanks are multiplied by the sample Dilution Factor and corrected for % moisture when necessary.

  - ✓ Field/rinse blanks are not positive.

  NOTE: All field blank results associated to a particular group of samples (may exceed one per case or one per day) may be used to qualify data. Blanks may not be qualified because of contamination in another blank. Field blanks must be qualified for surrogate, or calibration QC problems.

NOTE: If gross blank contamination exists(e.g., saturated peaks, hump-o-grams, junk peaks), all affected positive compounds in the associated samples should be qualified as unusable "R", due to interference. Non-detected pesticide target compounds do not require qualification unless the contamination is so high that it interferes with the analyses of non-detected compounds.

✓ Field/rinse/equipment blanks are associated with every sample.

ACTION: For low level samples, note in data assessment that there is no associated field/rinse/ equipment blank. Exception: samples taken from a drinking water tap do not have associated field blanks.

ICAL

✓ Data summary forms (containing calibration factors or response factors) for the initial 5 pt. calibration and daily calibration verification standards are present and complete for each analytical sequence.

✓ No transcription/calculation errors between raw data and data summary forms. Level 4 only

✓ Linearity criteria for the initial calibration standards has been satisfied.
(% RSD for the calibration factors (CFs)must be < 15.0% or coeff of determination >0.990 for all analytes)

INST: LC_LCMS10
STD00100 280-605949/3 IC 03/21/2023 14:11 1 LC1023C21027.d

CCAL

✓ Calibration verification/continuing calibration standard contain the perchlorate peaks of interest, analyzed on each working day, prior to sample analyses.

✓ Calibration verification/continuing calibration standard been analyzed after every 10 samples and at the end of each analytical sequence

✓ Percent difference (%D) between the Calibration Factor (CF) of the peaks used to identify the compounds in the CCV and the CF from these peaks in the initial calibration **do not exceed 15%.**

✓ New 5 pt. initial calibration curve been generated for those analytes which failed in the calibration verification/continuing calibration standard (8000C, section 11.7.3), and all samples which followed the out-of-control calibration verification/standard continuing calibration standard.

✓ No transcription/calculation errors between raw data and data summary forms (initial calibration summaries, calibration verification summaries, analytical sequence summaries. Level 4 only

ACTION: If large errors exist, call lab for explanation/resubmittal, make necessary corrections and note error in the data assessment.

ACRONYM LIST

AOI – Area(s) of Interest
APP – Accident Prevention Plan
CD – Cultural Debris
CEHNC – Corps of Engineers, Huntsville Center
DA – Department of the Army
DMM – Discarded Military Munitions
GIS – Geographical Information System
GPS – Global Positioning System
HE – High Explosive
IGE – Independent Government Estimate
MD – Munitions Debris
MEC – Munitions and Explosives of Concern
MIMID – Miniature Mine Detector
MPMG – Multi-Purpose Machine Gun
OE – Ordnance and Explosives
OESS – Ordnance and Explosives Safety Specialist
PDA – Personal Digital Assistant
ROM – Rough Order of Magnitude
RRD – Range Related Debris
RTLP – Range and Training Lands Program
UXO – Unexploded Ordnance

1.0 GENERAL DISCUSSIONS

1.1 INTRODUCTION

1.1.1 In an effort to support the Sustainable Range Program (SRP), the Ordnance and Explosives (OE) Directorate Corps of Engineers Huntsville Center (CEHNC) conducted a Munitions and Explosives of Concern (MEC) reconnaissance survey on the proposed Multi-Purpose Machine Gun (MPMG) Range at Camp McCrady, SC. The survey served to gather information that determines the location, extent and quantity of surface MEC and estimates the extent and quantity of subsurface MEC on the area of interest (AOI) for the planned RTLP project. This report will recommend response actions based on observations and data collected.

1.2 PROJECT OBJECTIVES

1.2.1 The objectives of the ordnance survey are as follows:

1) Gather sufficient data to adequately characterize the nature of MEC at the AOI designated by Camp McCrady;
2) Categorize AOI into a low, medium or high risk area(s) by determining the potential that individuals performing work on the site will encounter MEC;
3) Gather sufficient data in order to define clearance footprints;
4) Gather sufficient data to produce rough order of magnitude (ROM) estimate for MEC response action activities.

1.3 SCOPE OF MEC RECON SURVEY

1.3.1 CEHNC mobilized one 2-person team to traverse the AOI at the MPMG Range. The site was overlain with transects and uploaded to a Thales Mobile Mapper (TMM) personal digital assistant (PDA) with an integrated global positioning system (GPS) to guide the teams throughout the surveys. The transect path is designed to provide a uniform site coverage which will demonstrate meaningful site models. The uploaded transect paths were followed throughout the survey. The transect paths can be viewed in Appendix A maps.

1.3.2 During fieldwork, the team photographed significant munitions related items, terrain, vegetation, quality control functions and other pertinent visual opportunities that would aid in the understanding of the potential for explosive hazards at the site. All site photos can be viewed in Appendix B.

1.3.3 Historical documentation is sought for each site that is slated for a MEC recon survey. No site historical information was recovered. Appendix C has been left as a place holder in the event that historical information is revealed during the project.

1.3.4 Data quality is the most essential element of the MEC recon survey. A functionality test strip was swept twice daily to insure proper equipment function, battery strength, data quality and proper techniques are being applied by the operators. The test strip is established prior to

fieldwork. A MEC simulant was swept in the morning and at the end of the day. The QC log can be viewed in Appendix D.

1.3.5 The survey was an instrument assisted qualitative and quantitative reconnaissance that logged items encountered on the surface as well as quantities of detected subsurface anomalies. Items logged may include unexploded ordnance (UXO), munitions debris (MD), discarded military munitions (DMM), Range Related Debris (RRD), berms, craters, targets and any other notable ordnance related features. Complete definitions of munitions related terms can be found in Appendix E. The survey enables the CEHNC GIS team to generate quantitative and qualitative site models that display MEC related characteristics of the site, improves the accuracy of a MEC response action government estimate and provides data to MEC contractors for accurate response action proposals.

1.3.6 The actual field data collected is weighted heavily in the conclusions and recommendations of the MEC survey. Constant vigilance is imperative to collecting reliable data. The two primary factors that decrease the accuracy of MEC surveys are vegetation and speed of collection. No vegetation removal is executed prior to MEC surveys. Also, many miles of transect must be traversed to cover the large range areas in a small amount of time. A balance of walking pace and adequate detection sweeping must be negotiated by the detection equipment operator. 8.5 miles of transect was covered in order to attain the necessary site coverage. 253 data points were collected. The OESS, using an analog magnetometer, swept a one meter wide swath and reported the counts to the data collector every 50 meters. The surface count encompassed a three meter wide swath. All counts were inventoried every 50 meters. The data collector kept the team on the projected path and informed the OESS when the next point had been reached. The field team leader monitors detection quality being achieved. If quality issues are observed, the field team leader is responsible for correcting the problem. The collection data can be viewed in Appendix F.

1.4 TECHNICAL APPROACH

1.4.1 The CEHNC team developed a survey coverage strategy using Geographical Information System (GIS) files. The CEHNC team created an addendum to the programmatic work plan (PWP) to meet the data quality objectives of the project.

1.4.2 Camp McCrady provided GIS data and/or information necessary to locate and development a comprehensive plan that would guide the recon team throughout the survey. The CEHNC GIS team created an overlay of transects for the survey team to follow while in the field.

1.4.3 A test plot was implemented at the site. A simulant was utilized at the test plot to verify equipment function. Coordinates were taken of the item for documentation. The test plot is a quality control (QC) matrix utilized to demonstrate proper function of the detection equipment and competence of the detection equipment operators. A Schiebel Miniature Mine Detector (MIMID) Electromagnetic (EM) all metals detector was used for quantitative subsurface anomaly counts. Detection of the simulants was verified each day at the site before and after survey activities.

1.4.4 The CEHNC GIS technician uploaded data files to the TMM to provide guidance in the field. While in the field the GIS technician guided the team as close to the proposed transects as possible. The team logged all surface and subsurface contacts at the end of a 50 meter increment along the transect. Data collection points were established every 50 meters along the transect for the entire survey route.

1.4.5 One 2-man survey team followed the planned transects, logged observed surface UXO, DMM, MD, and CD, recorded physical features that would indicate MEC related activity, terrain, geology, targets and logged the number of subsurface ferrous anomalies detected. The team progressed along the projected transects with the OE safety specialist (OESS) in the lead. His primary mission was to cover a one meter wide strip with the MIMID and note the number of subsurface anomalies detected, count notable surface items and ensure any surface UXO on the path was avoided by the team. The TMM operator followed entering all ordnance related observations. The OESS covered a minimum one meter wide swath for subsurface contacts. An effective 3 meter wide swath was covered for visual identification of surface items. All munitions related items were logged at the data collection points.

1.5 SITE LOCATION

Camp McCrady is the National Guard contingent located on Fort Jackson, SC. The site is located at Range 24 on the west side of the East Impact Area.

1.6 SITE DESCRIPTION

The MPMG is approximately 166 acres in surface area. The terrain is flat to rolling with a few abrupt changes in elevations. The vegetation is primarily wooded with oaks. The soil is very sandy.

1.7 MEC RELATED SITE HISTORY

The site is within the current delineated impact area. An active range exists to the north which the footprint overlaps down range. Numerous ordnance appears to have been used on the current range. Historic range fans for 105mm and 155mm Howitzer are displayed in the 2005 historical review previously conducted by Malcolm Pirnie. The historical review can be view in Appendix C. The historical range fans were geo-referenced and overlaid with the range footprint. The overlaid footprint can be viewed in Appendix A Figure 7.

1.8 PERSONNEL

1.8.1 Project Manager

Ken Hewitt is the project manager and is responsible for execution of all aspects of the MEC survey.

1.8.2 Technical Manager

Jason Burcham is the technical manager and is responsible for all technical issues that affect project implementation, quality, and feasibility.

1.8.3 GIS Analyst Team

Dustin Ray is the GIS specialist and is responsible for project GIS deliverables.

1.8.4 OE Safety Specialist

Michael Slovak was the OESS during field work. He was responsible for the safety of the team in the field, identification of ordnance, the abbreviated accident prevention plan (APP), assist in quality control, operation of detection equipment, and reporting MEC related data to the data collector.

1.8.5 Field Team Leader

Jason Burcham was the field team leader. He was responsible for creation and adherence to the project work plan and work plan addendum, adequate collection of data at the sites, quality control, field coordination with range control, and development of the MEC survey report.

1.8.6 Camp McCrady POC

Major Moyer was the primary points of contact (POC) during the survey.

2.0 TECHNICAL DISCUSSION

2.1 INITIAL COORDINATION - The team arrived at Fort Jackson range control at 0700 on Sunday November 11, 2012. The survey team was given clearance to occupy then proceeded to the site. The team surveyed transects until coverage was complete. The project progressed as follows in Table 1.

2.2 FIELDWORK PROGRESSION - Fieldwork progressed very efficiently throughout the survey. The team completed the site within schedule and collected the data needed for analysis of the site. The time spent performing fieldwork on the site can be viewed in Table 1.

TABLE 1
Fieldwork Progression

Site	Date	Type of Investigation	Begin	End	Complete
MPMG	**11/11/12**	**Survey**	**0730**	**1730**	**No**
MPMG	**11/12/12**	**Survey**	**0730**	**1430**	**Yes**

2.3 TEST PLOT - An area offsite was swept by an OESS and determined free of subsurface anomalies. An ordnance simulant item was placed on the surface and swept in order to fulfill the QC matrix for equipment function and operator competence. The test plot was swept at the beginning and end of fieldwork each day. The coordinates of each offsite location are provided in Table 2. A Schiebel MIMID was tested at the beginning and end of field activities at the site. It underwent and passed all functionality checks. Detection was observed and noted. Detection devices were inspected for any damage that may impair its functionality.

AOI	Simulant	Depth	Coordinates, WGS84 UTM Zone 17N (X,Y)
MPMG	MEC Simulant	0	513152, 3764582

2.4 FIELD ACTIVITIES
One 2-person team traversed the site on November 11-12, 2012. A test strip was created offsite for equipment functionality checks. After functionality checks were complete, the survey commenced. The team traversed separate transects delineated north-south across the site. The transects were spaced 100 meters apart across the 166 acre site. The effective coverage was 262 acres due to transects that exceeded the limits of the MPMG footprint. See Figure 2 of Appendix A for a graphic representation of site coverage. The MEC survey team proceeded with the OESS sweeping a one meter wide swath with a Schiebel MIMID on high setting. Metallic subsurface anomalies in the path were counted and logged at predetermined data collection points (Every 50m). The data collector guided the team between data points. The team counted surface items and the OESS identified munitions related items. UXO, MD, RRD and CD were logged during the survey. Old hard targets were observed on the site. High quantities of ordnance is present on the northern portion of the site (See Appendix A).

2.5 SUMMARY OF FINDINGS – 4093 MD items were observed which consisted of HE fragments, 81mm Illumination Mortars, 105mm TP Projectiles. Two MEC items were observed which consisted of a 75mm HE Projectile and a 90mm HEAT Projectile. Several targets exist as well as high quantities of small arms bullets/debris.

TABLE 3
Summary of Findings

Site	MEC Observed	RRD Observed	MD Observed	MEC Response Needed
MPMG	2	456	4093	Yes

3.0 MAP REFERENCES, ARCHIVAL REFERENCES AND DISCUSSIONS

3.1 Overall MPMG Location - The location is displayed in Figure 1, Appendix A, Overall Location Map. The site is located at Range 24 west of the impact area. Figure 1 provides a visual reference of the site in relation to the installation.

3.2 MPMG Recon Survey Coverage - The proposed coverage of the site is generated at the CEHNC prior to fieldwork. The coverage is an unbiased uniform coverage of the site. Actual survey coverage may vary in the field due to installation instructions, dangerous terrain features, and/or field revision based MEC encountered. Typically the survey coverage delineated in the office is followed in the field to the greatest extent practical. The proposed coverage thoroughly covered the boundaries of the MPMG Range. The MPMG Range Site coverage can be viewed in appendix A, Figure 2.

3.3 Subsurface Contact Distribution
Subsurface anomalies were observed at the site. A Schiebel MIMID EM analog metal detector was used to gather subsurface quantitative data. All metallic anomalies are detectable by the instrument. The subsurface contacts indicate subsurface metallic densities. Anomaly densities

were developed to demonstrate the subsurface metallic characteristics of the sites. The densities reported are typically lower than the anomaly densities that will be encountered during a removal action. The subsurface density contours can be viewed in Appendix A, figure, 3.

3.4 Surface Density
Metallic surface items were logged during the recon. The surface density map demonstrates quantitative metallic surface characteristics of the site. The densities reported are typically lower than the anomaly densities that will be encountered during a removal action. The surface density maps can be viewed in Appendix A, figure 4.

3.5 Munitions Item Map
A munitions related surface item map was created to demonstrate significant findings of the reconnaissance survey. The item map can be viewed in Appendix A, figure 5.

3.6 Risk of Encountering MEC - A map that demonstrates areas of high, medium, and/or low risk of encountering MEC has been created based on the data collected. The map does not denote the hazard severity of the items encountered, but the probability of encountering explosive hazards throughout the AOI based on all known information. The map can be viewed in Appendix A, Figure 6.

3.7 Historic Analysis – A historical analysis was completed from a 2005 historical review report produced by Malcolm Pirnie. The historic map pertaining to the project site was geo-referenced and overlain onto the MPMG footprint. The map can be viewed in Appendix A Figure 7. The historical report can be viewed in Appendix C. Figure 4-9 in the report was overlain onto the footprint.

3.8 Data Tables - The determinations made in this report rely heavily upon the field data collected while traversing the site. Constant vigilance and awareness of the munitions related site characteristics must be maintained at all times in order to collect reliable data. At each data point a thorough data collection checklist is evaluated to determine munitions related quantitative and qualitative characteristics of the segment that was traversed. Typical data collection point spacing is approximately 50 meters. This regimen of data collection was performed 253 times at the MPMG. The data collection tables can be viewed in Appendix F.

4.0 MEC SURVEY CONCLUSIONS

Two MEC items were discovered during the survey. Evidence of MEC related site use exists throughout a large portion of the site. Numerous HE fragments were observed. The site exhibits areas with low, medium and high probability of encountering explosive hazards. Figure 6, Appendix A conveys the risk of encountering MEC probability map.

5.0 MEC SURVEY RECOMMENDATIONS

A subsurface clearance is recommended in the medium and high risk areas. Standby construction support is recommended in the low risk areas.

This report accurately depicts the survey team's evaluation of the extent of UXO contamination at the site but likely underreports the nature of contamination. The actual conditions experienced during a removal action will differ significantly from the conditions reported herein for a number of reasons. For example, the site was not cleared of vegetation prior to the survey; therefore this hampered the survey efforts which most likely resulted in an under reporting of surface and sub-surface anomaly density. Also, the speed at which the surveyor moved across the site and the fact that no QA followed will inherently result in an underestimation of the anomalies to be encountered in an actual removal action. Also an anomaly as reported herein is an area which demonstrates elevated geophysical instrument response and not the number of metallic items to be encountered at the site. Given that removal teams often define an anomaly as a metallic item as opposed to an anomalous area it is certain that the anomaly density reported by removal teams will exceed the anomaly density reported herein. The type of geophysical instrument and settings used by removal teams will certainly differ from those used by the survey team thereby creating differences between reported and actual number of geophysical anomalies at the site. The survey transect spacing is relatively wide compared to the small size of the construction features (targets, road corridors, etc) and it is likely that the survey missed high anomaly density areas that may be part of the clearance area. These and other factors will cause the report to underestimate the conditions at the site. The use of the data provided as the basis of estimate requires an experienced understanding of how the data of this type is collected, analyzed, interpreted, and presented and requires an understanding of the limitations of the data provided by assessments of this type. Therefore this information shall not be used by bidders in preparation of their pricing proposals. Bidders who do utilize this information shall accept full and sole responsibility for identifying and considering all factors that may affect the cost to execute the work use the data presented herein at their own risk.

GLOSSARY OF TERMS

Closed Range – A military range that has been taken out of service as a range and that either has been put to new uses that are incompatible with range activities or is not considered by the military to be a potential range area. A closed range is still under the control of a Department of Defense (DoD) component.

Defense Site – All locations that are or were owned by, leased to, or otherwise possessed or used by the DoD. The term does not include any operational range, operating storage or manufacturing facility, or facility that is used or was permitted for the treatment or disposal of military munitions.

Discarded Military Munitions (DMM) – Military munitions that have been abandoned without proper disposal or removed from storage in a military magazine or other storage area for the purpose of disposal. The term does not include unexploded ordnance, military munitions that are being held for future use or planned disposal, or military munitions that have been properly disposed of consistent with applicable environmental laws and regulations.

Explosive Ordnance Disposal (EOD) – The detection, identification, on-site evaluation, rendering safe, recovery, and final disposal of unexploded explosive ordnance. It may also include explosive ordnance that has become hazardous by damage or deterioration.

Explosives Safety – A condition where operational capability and readiness, personnel, property, and the environment are protected from the unacceptable effects of an ammunition or explosives mishap.

Formerly Used Defense Site (FUDS) – A DoD program that focuses on compliance and cleanup efforts at sites that were formerly used by the DoD. A FUDS property is eligible for the Military Munitions Response Program if the release occurred prior to October 17, 1986;

the property was transferred from DoD control prior to October 17, 1986; and the property or project meets other FUDS eligibility criteria.

Military Munitions – All ammunition products and components produced for or used by the armed forces for national defense and security, including ammunition products or components under the control of the Department of Defense, the U.S. Coast Guard, the U.S. Department of Energy, and the National Guard. The term includes confined gaseous, liquid, and solid propellants, explosives, pyrotechnics, chemical and riot control agents, smokes, and incendiaries, including bulk explosives, and chemical warfare agents, chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, and devices and components of the above. The term does not include wholly inert items, improvised explosive devices, and nuclear weapons, nuclear devices, and nuclear components, other than non-nuclear components of nuclear devices that are managed under the nuclear weapons program of the Department of Energy after all required sanitization operations under the Atomic Energy Act of 1954 have been completed.

Munitions and Explosives of Concern (MEC) – This term, which distinguishes specific categories of military munitions that may pose unique explosives safety risks, means unexploded ordnance, DMM, or munitions constituents (e.g., Trinitrotoluene [TNT], Cyclotrimethylenetrinitramine [RDX]) present in high enough concentrations to pose an explosive hazard.

Munitions Constituents (MC) – Any materials originating from unexploded ordnance, DMM, or other military munitions, including explosive and non-explosive materials, and emission, degradation, or breakdown elements of such ordnance or munitions.

Operational Range – A range that is under the jurisdiction, custody, or control of the Secretary of Defense and that is used for range activities or, although not currently being used for range activities, that is still considered by the Secretary to be a range and has not been put to a new use that is incompatible with range activities.

Other than Operational Range – Encompasses closed, transferred, and transferring ranges.

Range – A designated land or water area set aside, managed, and used for range activities of the DoD. Ranges include firing lines and positions, maneuver areas, firing lanes, test pads, detonation pads, impact areas, electronic scoring sites, buffer zones with restricted access and exclusionary areas, and airspace areas designated for military use in accordance with regulations and procedures prescribed by the Administrator of the Federal Aviation Administration.

Transferred Range – A range that is no longer under military control and had been leased by the DoD, transferred, or returned from the DoD to another entity, including federal entities. This includes a military range that is no longer under military control, but that was used under the terms of an executive order, special-use permit or authorization, right-of-way, public land order, or other instrument issued by the federal land manager. Additionally, property that was previously used by the military as a range, but did not have a formal use agreement, also qualifies as a transferred range.

Transferring Range – A range that is proposed to be leased, transferred, or returned from the DoD to another entity, including federal entities. This includes a military range that was used under the terms of a withdrawal, executive order, special-use permit or authorization, right-of-way, public land order, or other instrument issued by the federal land manager or property owner. An active range will not be considered a transferring range until the transfer is imminent (generally defined as the transfer date is within 12 months and a receiving entity has been notified).

Unexploded Ordnance (UXO) – Military munitions that have been primed, fused, armed, or otherwise prepared for action; have been fired, dropped, launched, projected, or placed in such a manner as to constitute a hazard to operations, installations, personnel, or material; and remain unexploded either by malfunction, design, or any other cause.

1 INTRODUCTION

The Department of Defense (DoD) has established the Military Munitions Response Program (MMRP) under the Defense Environmental Restoration Program (DERP) to address DoD sites with unexploded ordnance (UXO), discarded military munitions (DMM), and munitions constituents (MC) located on current and former military installations. Properties classified as operational military ranges, permitted munitions disposal facilities or operating munitions storage facilities are not eligible for the MMRP, nor are sites that had releases after September 30, 2002. The United States (U.S.) Army's (Army) inventory of closed, transferring, and transferred (CTT) military ranges and defense with UXO, DMM, or MC has identified sites eligible for action under the MMRP. Ten closed ranges (also referred to as sites) were identified during the inventory at Fort Jackson, located in the City of Columbia, Richland County, South Carolina (SC). A Site Inspection (SI) is currently ongoing at these sites. This report presents the results of the SI Historical Records Review (HRR).

The DoD is currently establishing policy and guidance for munitions response actions under the MMRP. However, key program drivers developed to date conclude that munitions response actions will be conducted under the process outlined in the National Contingency Plan (40 Code of Federal Regulations 300) as authorized by the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, 42 United States Code (U.S.C.) 9605, as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), Pub. L. 99-499 (hereinafter CERCLA). While it is the DoD's goal to address MMRP sites under the CERCLA, the Army recognizes that some installations (including Fort Jackson) will need to address these sites under the Resource Conservation and Recovery Act (RCRA) Corrective Action (CA) program.

The Final Phase 3 CTT Range Inventory Report (CTT Range Inventory) for Fort Jackson, dated June 2003, marked the completion of the Preliminary Assessment (PA) phase of work under CERCLA and the RCRA Facility Assessment (RFA) phase of work under the RCRA CA program. The next step in the process is the SI (CERCLA terminology), which

corresponds with the Confirmatory Sampling (CS)/RCRA Facility Investigation (RFI) Phase I under RCRA. The work at Fort Jackson will be implemented under the MMRP SI program, which utilizes CERCLA terminology for programmatic documents. As such, the documents developed for the Fort Jackson MMRP SI, including the HRR, will use CERCLA terminology. It is understood that the following RCRA CA program terminology is implied:

Table 1-1: CERCLA and RCRA Terminology

CERCLA	RCRA
Preliminary Assessment (PA)	RCRA Facility Assessment (RFA)
Site Inspection (SI)	Confirmatory Sampling (CS)/RCRA Facility Investigation (RFI) Phase I
Remedial Investigation (RI)	RFI

1.1 PURPOSE/SCOPE

The purpose of the Site Inspection HRR is to perform a limited-scope records search to document historical and other known information for MMRP sites at Fort Jackson, to supplement the CTT Range Inventory information, and to facilitate decisions on what information is needed to determine the next steps in the CERCLA/RCRA process. The SI is part of the CERCLA process and will be conducted following completion of the HRR report. As noted in the previous section, the SI corresponds with the CS/RFI Phase I.

1.2 PROJECT DRIVERS

The regulatory structure for managing MMRP sites at Fort Jackson is guided by a mixture of federal, state, and local laws, as well as DoD and Army regulations and guidance. The picture is further complicated by debates at the national level between the DoD and the United States Environmental Protection Agency over key issues that include uncertainty of the final structure of the MMRP. However, key legislative and administrative precedents to date will undoubtedly influence the final regulatory framework for the MMRP. The key legislative, administrative, and historic precedents include the following:

Defense Environmental Restoration Program (DERP) Management Guidance (September 2001)

The DERP Management Guidance establishes a MMRP element for UXO, DMM, and MC defense sites. The history of DERP dates back to the SARA of 1986. The scope of the DERP is defined in 10 U.S.C. §2701(b), which states that the:

> Goals of the program shall include the following: … (1) The identification, investigation, research and development, and cleanup of contamination from hazardous substances, pollutants, and contaminants. (2) Correction of other environmental damage (such as detection and disposal of unexploded ordnance) which creates an imminent and substantial endangerment to the public health or welfare or to the environment.

National Defense Authorization Act (Fiscal Year [FY] 02) (Sections 311-312)

Sections 311-312 of the National Defense Authorization Act of FY02 reinforced the DoD's 2001 DERP Management Guidance by tasking the DoD to develop and maintain an inventory of defense sites that are known or suspected to UXO, DMM, or MC. Section 311 requires the DoD to develop a protocol for prioritizing defense sites for response activities in consultation with the states and Tribes. Section 312 requires the DoD to create a separate program element to ensure that the DoD can identify and track munitions response funding.

The September 2001 Management Guidance for the DERP and the Defense Authorization Act FY02, described above, established the MMRP. The DERP and the MMRP provide guidance and methods for conducting a baseline inventory of defense sites containing, or potentially containing, UXO, DMM, or MC.

1.3 BACKGROUND

As stated above, the CTT Range Inventory for Fort Jackson is considered to mark the completion of the PA phase of work under the CERCLA. The SI is the next phase in the CERCLA process and will complete the PA/SI requirements for the MMRP sites. As noted in the beginning of this section, the HRR uses CERCLA terminology. It is understood that RCRA CA program terminology is implied. The following paragraphs summarize the results

of the CTT Range Inventory at Fort Jackson and present the primary goals of performing a SI.

1.3.1 Inventory

The Army Range Inventory program was conducted in three phases. The first phase (Phase 1) involved a data call issued through the Army Environmental Center (AEC) requesting general information about ranges on various installations under each U.S. Army Major Command. The Phase 1 Inventory was conducted using a questionnaire called the Advance Range Survey (ARS). The ARS allowed the Army to meet the short-term data goal of supporting the DoD preparation of Senate Report 106-50.

Mr. James Wyatt, Range Officer, completed the ARS Phase 1 Inventory survey for Fort Jackson in November 2000. Three records for CTT ranges at Fort Jackson were found in the database. The CTT ranges listed in the ARS included the Old Hand Grenade Range #3, Old Small Arms Range #3, and a World War II Rifle Range Complex #6, all of which were considered closed. The Fort Jackson ARS data was submitted to AEC and compiled into a master database of Army installations.

The ARS allowed the Army to meet its short-term needs; however, the Army's long-term needs required a more detailed inventory of its ranges that was not achievable based on the information in the ARS. For management and budgetary reasons, the Army divided the detailed follow-up inventory into two phases. The Phase 2 Inventory addressed operational ranges, while Phase 3 covered CTT ranges and sites with UXO, DMM, or MC. During the Fort Jackson Phase 2 Inventory, completed in the winter of 2000, 44,028 acres were classified as operational range areas. The results were documented in a range inventory binder that was submitted to Fort Jackson and its major command, the U.S. Army Training and Doctrine Command (TRADOC).

The Phase 3 Inventory was completed for Fort Jackson in June 2003. Ten closed ranges were identified at Fort Jackson. Additional information regarding the results of the Phase 3 CTT Range Inventory is discussed in Sections 2.2 and 3.3.

1.3.2 Site Inspection

The primary goal of the MMRP SI is to collect information necessary to make one or more of the following decisions: 1) determine whether a RI/Feasibility Study is required at a site; 2) determine whether an immediate response is needed; or 3) determine whether the site qualifies for no further action (NFA). The installation-wide SI at Fort Jackson will address both munitions and explosives of concern (MEC), which include UXO and DMM, and MC issues for the MMRP sites. The secondary goals of the SI are to include collecting data to prepare better Cost to Complete estimates and site prioritization for the MMRP sites.

1.4 REPORT ORGANIZATION

This HRR has the following sections:

- Section 1 – Introduction
- Section 2 – Site Description
- Section 3 – Data Collection and Document Review Process
- Section 4 – Summary of Findings
- Section 5 – Conceptual Site Model (CSM)
- Section 6 – Conclusions

The following supporting information and analyses are appended to this HRR:

- Archives Searched/Data Sources (Appendix A)
- Archive Documents (Appendix B)
- Interview Records (Appendix C)
- Munitions Technical Data Sheets (Appendix D)

2 SITE DESCRIPTION

2.1 INSTALLATION DESCRIPTION

Fort Jackson (also referred to as the "installation") is located in the eastern section of Columbia, SC, in Richland County near the center of the state. The inset on Map 2-1 shows the location of the installation within SC. The installation occupies approximately 52,000 acres, which includes a cantonment area, training and maneuver areas, live fire zones, and impact areas. The cantonment area, which contains the majority of the facility housing, administrative buildings, and industrial operations, is located in the southwestern portion of the installation. Recreational areas at Fort Jackson include the Fort Jackson Flight Club (FJFC) (a radio-controlled [R/C] airplane field) and the Weston Lake Recreation Area. The remainder of the installation, which is primarily undeveloped and consists of moderate to dense pine woodlands, is used for military training.

Fort Jackson was originally established in 1917 (referred to as Camp Jackson at that time) as an infantry training center. For a brief period of time (1921-1925), the installation was inactive. From 1925 to 1939, it was controlled by SC and used as an encampment and training area for National Guard troops. In 1939, the facility was transferred to the Federal Government, designated as Fort Jackson, and re-established as an infantry training center. The current and primary mission of Fort Jackson is to train initial entry recruits for duty as soldiers for Army units. To support this mission, Fort Jackson currently houses Army training brigades and serves as a reception station that processes newly inducted and prior service personnel forwarded to the installation from recruiting and induction stations.

2.2 MMRP SITE DESCRIPTIONS

Ten MMRP sites were identified at Fort Jackson during the CTT Range Inventory. These sites included the following:

- 1000-Yard Range
- 600-Yard Range

- Andrew Jackson Range
- FJFC
- Hand Grenade Court Number No. 2
- Live Hand Grenade Court 2
- Machine Gun Range
- Mortar Range
- Rifle Grenade Range Number NR 2
- Submachine Gun Area

The site locations are illustrated on Map 2-1, and the sites are discussed in detail in Section 3.3. The information obtained and descriptions of these sites that resulted from the CTT Range Inventory are presented in the following paragraphs:

1000-Yard Range: The 1000-Yard Range (Army Environmental Database-Restoration [AEDB-R] Site ID: FTJA-001-R-01) was a former rifle range located in the current cantonment area near Washington Road and Ivy Road (more accurately described as near Hartsville Guards Road and Chesnut Road). The approximately seven-acre range was listed on a 1919 map adjacent to the 600-Yard Range (also included in the CTT Range Inventory). The range was used from 1918 to 1920. Documentation indicated that the 1000-Yard Range included intermediate targets and was used as a 100-, 200-, 300-, 600-, and 1000-yard range. Today, the area is adjacent to base housing, streets, and a school. However, the area where the former 1000-Yard Range was located and the immediate area surrounding the range are undeveloped. During the CTT Range Inventory, the Range Control Officer and the data collection team visited the area where the ranges were located. Signs of a former rifle range were not observed. The team did not locate records of UXO sightings, incidents, or clearances related to the 1000-Yard Range.

600-Yard Range: The 600-Yard Range (AEDB-R Site ID: FTJA-002-R-01) was a former rifle range located directly adjacent to and south of the 1000-Yard Range in the cantonment area near Hartsville Guards Road and Chesnut Road. The 19-acre range was listed on a 1919 map. The range had a series of targets located at 100, 200, 300, 500 and 600 yards. The dates of use (1918 to 1920) of the 600-Yard Range are assumed to be identical to the dates for the 1000-Yard Range. Today, the area is adjacent to base housing, streets, and a school. However, the area where the former 600-Yard Range was located and the immediate area surrounding the range are undeveloped. During the CTT Range Inventory, the Range Control Officer and the data collection team visited the area surrounding the former rifle range and did not observe signs of the former rifle range. The team did not locate records of UXO sightings, incidents, or clearances related to the 600-Yard Range.

Andrew Jackson Range: The Andrew Jackson Range (AEDB-R Site ID: FTJA-003-R-01) is currently a morale, welfare, and recreation (MWR) area used for recreational small arms target practice. The range is open to the military, dependents, and civilian employees and is managed by the MWR program at Fort Jackson. The range is located just off of Wildcat Road within the current boundaries of the West Impact Area. The range area consists of approximately 15 acres. The recreational pistol range was established in the early to mid 1980s. The area was formerly part of the surface danger zone for the M-1 Transition Range NR 3, which was shown on several maps from the 1940s. The area was also in the buffer of several overlapping range fans (small arms ranges) from the 1950s. For the CTT Range Inventory, the area was identified as a closed range because it was not operational and had a former range use.

FJFC: The FJFC (AEDB-R Site ID: FTJA-004-R-01) was an approximately 54-acre area located east of Wildcat Road just north of Shenandoah Road. The area was used as a machine gun range in the 1950s, 1960s, and 1970s. The FJFC land consists of a flat, cleared, level area surrounded by forest and grassland. The flat, cleared portion of the site has been used as an airstrip for R/C small recreational type model aircraft since the late 1980s. The improvements to the site for the airstrip include a gravel parking area, sun shade, a picnic area, a grounds maintenance storage building, and a set of bleachers for spectators to watch

the R/C model plane operations. The area was considered a closed range for the purposes of the inventory because it was not operational and had a former range use.

Hand Grenade Court No. 2: The Hand Grenade Court No. 2 (AEDB-R Site ID: FTJA-005-R-01) was located in the northern part of the Weston Lake Area southwest of the Mortar Range. The period of use (1944 to 1950) and types of grenades reported for the inventory are approximate. Using a conservative approach, it was assumed for the CTT Range Inventory that live, as well as practice, grenades may have been used on the range. It is important to note that the team did not locate records of UXO sightings, incidents, or clearances related to the Hand Grenade Court No. 2. The three-acre area shown on Map 2-1 is a 100-meter by 100-meter square representing the approximate size and location of the former hand grenade impact area. The range is closed. It lies within the boundary of the Weston Lake Area. The area adjacent to Weston Lake is used for camping, picnics, and other recreational activities. However, the former hand grenade court has not been improved with recreational facilities (e.g., camp sites, trails, etc.) and is in a remote location not easily accessible by people using the Weston Lake Area recreational facilities.

Live Hand Grenade Court 2: The Live Hand Grenade Court 2 (AEDB-R Site ID: FTJA-006-R-01) was listed on a 1949 map of Fort Jackson. The approximate period of use for this range was 1940 to 1950. The period of use and types of grenades reported for the inventory were approximated based upon maps reviewed and the history of the installation. It was assumed that live, as well as practice, grenades may have been used on the range. The team did not locate records of UXO sightings, incidents, or clearances related to the former Live Hand Grenade Court 2. The range is closed. The three-acre area shown on the Map 2-1 is a 100-meter by 100-meter square representing the approximate size and location of the former hand grenade impact area. The area is close to the Pierce Terrace base housing complex, which is located just off of Chesnut Road. The immediate area of the former hand grenade range is undeveloped. This area was also used for field fortification training in the 1970s and 1980s.

Machine Gun Range: The Machine Gun Range (AEDB-R Site ID: FTJA-007-R-01) was in the current cantonment area near Hartsville Guards Road and Chesnut Road. The former three-acre range was just south of the 1000-Yard Range and the 600-Yard Range. It is also assumed that this range was used only between 1918 and 1920. Today, the area is adjacent to base housing, streets, and a school. However, the area where the former machine gun range was located and the immediate area surrounding the range are undeveloped. The Range Control Officer and the data collection team visited the area surrounding the former range and did not observe signs of the former range.

Mortar Range: The Mortar Range (AEDB-R Site ID: FTJA-008-R-01) was located in the northern section of the Weston Lake Area, with the Hand Grenade Court Number No. 2 to the southwest and the Submachine Gun Area to the east. The approximately 112-acre area was once part of a buffer for a mortar range in the 1940s. In addition, in 1969, other ranges overlapped the area, including 105-millimeter (mm), 155-mm, and 8-inch Howitzer ranges. The Submachine Gun Area also overlapped the area. The range is closed and is now part of the Weston Lake Area. However, the Mortar Range area has not been improved by recreational facilities (e.g., camp sites, trails, etc.) and is located about 1/4 mile north of the main recreation facilities at the Weston Lake Area. The team did not locate records of UXO sightings, incidents, or clearances related to the Mortar Range.

Rifle Grenade Range NR 2: The Rifle Grenade Range NR 2 (AEDB-R Site ID: FTJA-009-R-01) was estimated to be used from the 1940s through the 1960s. The range was used for firing rifle grenades and was also listed on a 1993 map reviewed at the installation with the hand written title "Explosive Ordnance Impact Areas". The map depicted several different explosive ordnance impact areas on Fort Jackson that were drawn in by hand. The range is closed and is now part of the Weston Lake Area. The 90-acre area has not been improved with recreational facilities (e.g., camp sites, trails, etc.) and is located approximately 1/2 mile west of the main recreation facilities of the Weston Lake Area. A dirt road runs close to the site (Washington Light Infantry Road), which is accessible by vehicle from the installation, but not from the Weston Lake Area. There is the potential that practice and live high explosive (HE) rifle grenades were fired on the former Rifle Grenade

Range NR 2. In 1969, the area appeared to be in the buffer areas for 155-mm and 8-inch Howitzer ranges. The impact area associated with the artillery ranges was not located in close proximity to the 90-acre Rifle Grenade Range NR 2 area.

Submachine Gun Area: The Submachine Gun Area (AEDB-R Site ID: FTJA-010-R-01) was located in the northern part of the Weston Lake Area extending into the East Impact Area. The area reported in the inventory occupied 101 acres and consisted of three separate ranges listed on a 1949 map of Fort Jackson. The three ranges included the Dismounted Submachine Gun No. 1 Range, the Moving Vehicle Submachine Gun Range, and the Dismounted Submachine Gun No. 2 Range. All three ranges were adjacent to each other, and their range fans overlapped. The ranges were situated so that the direction of fire was to the north into the East Impact Area. The Submachine Gun Area is closed and is now part of the Weston Lake Area. However, the range area has not been improved by recreational facilities (e.g., camp sites, trails, etc.) and is located approximately 1/4 mile north of the main recreation facilities at the Weston Lake Area. The team did not locate records of UXO sightings, incidents, or clearances related to the range.

3 DATA COLLECTION AND DOCUMENT REVIEW PROCESS

Five primary sources of information were researched as part of the data collection effort for the HRR. The types of data included:

1) National and regional archives record group (RG) search
2) Installation site visits
3) Review of existing Archives Search Reports (ASRs) and administrative records for adjacent Formerly Used Defense Sites (FUDS) associated with Fort Jackson
4) Interviews
5) Review of the CTT Range Inventory and backup data

3.1 DATA COLLECTION METHODS

3.1.1 National and Regional Archives

Relevant archival record repositories and RGs were selected based on guidance set forth in the *Technical/Regulatory Guideline for Munitions Response Historical Records Review,* prepared by the Interstate Technology & Regulatory Council Unexploded Ordnance Team and based on the process developed by the U.S. Army Corps of Engineers (USACE) for performing ASRs (guidance provided at http://www.mvs.usace.army.mil/engr/ed-p/asr.htm). Only the record repositories that have historically proved to be most useful were searched. The archival repositories and RGs that were searched for this HRR are listed below. The archival data reviewed are presented by RG and source in Appendix A.

- National Archives, National Archives & Records Administration (NARA), College Park, Maryland (MD)
    - RG 18: Army Air Forces
    - RG 51: Bureau of Budget
    - RG 71: Bureau of Yards and Docks
    - RG 77: Chief of Engineers

  - RG 92: Quartermaster General
  - RG 111: Office of the Chief Signal Officer
  - RG 114: Natural Resources Conservation Service
  - RG 145: Agricultural Stabilization and Conservation Service
  - RG 156: Office of Chief of Ordnance
  - RG 168: National Guard Bureau
  - RG 270: War Assets Administration (WAA), Real Property Disposal Files
  - RG 319: Army Staff
  - RG 337: Headquarters, Army Ground Forces
  - RG 338: U.S. Army Commands
  - RG 373: Defense Intelligence Agency
  - RG 393: U.S. Army Continental Commands, 1821-1920
  - RG 394: U.S. Army Continental Commands, 1920-1942
  - RG 407: Adjutant General

- Library of Congress Prints & Photographs Division

- Library of Congress Geography and Map Division

- Library of Congress Main Reading Room

- Library of Congress Manuscript Division

- Regional Archives, NARA Southeast Region, East Point (Atlanta), Georgia

  - RG 77: Chief of Engineers
  - RG 156: Office of Chief of Ordnance
  - RG 270: WAA, Real Property Disposal Files

3.1.2 Web Search

In addition to the data sources listed above, Malcolm Pirnie also conducted research on the Internet to supplement the archival data and information received from the installation. The

list below presents the web sites that were searched for information on Fort Jackson. The search was conducted on June 28, 2004 and June 30, 2004. Information collected from the web search is presented in Section 3.2.

- Department of Defense Archives, http://www.defenselink.mil/pubs/archive.html
- DoD Explosives Safety Board, http://www.ddesb.pentagon.mil/
- National Imagery and Mapping Agency, Bethesda, MD, http://www.nima.mil/
- U.S. Army Center of Military History, Fort McNair, Washington, District of Columbia, http://www.army.mil/cmh-pg/

3.1.3 Site Visit

An initial site visit to Fort Jackson was conducted on May 4 and 5, 2004, by Malcolm Pirnie team members Ms. Susan Burtnett, Ms. Leigh Blake, and Mr. Jonathan Sperka. Ms. Burtnett, Ms. Blake, and Mr. Dan Hains conducted a follow-up site visit on June 16 through 18, 2004. Additional data was reviewed during a third site visit conducted by Ms. Burtnett and Ms. Blake on July 7 and 8, 2004. The site visits were conducted to review relevant installation records to complete the HRR and to develop the CSMs for the Fort Jackson sites. While on-site, Ms. Burtnett and Ms. Blake reviewed environmental reports and documents for Fort Jackson at the Environmental/Natural Resources Office, Fort Jackson Museum, and Range Control. Interviews with relevant personnel were also conducted. A summary of the applicable information collected during the site visit is presented in Sections 3.2.1 through 3.2.4. Results of the interviews are presented in Section 3.2.5.

3.1.4 Existing ASR and FUDS Information Review

Malcolm Pirnie obtained a copy of the *Archives Search Report, Findings for the Former Pontiac Precision Bombing Range. May 1995. U.S. Army Corps of Engineers, Rock Island District and U.S. Army Defense Ammunition Center and School* and other FUDS related documents for the Pontiac Precision Bombing Range (I04SC003701) from the PIRS website referenced in Section 3.1.2. Malcolm Pirnie also obtained a copy of the *Archives Search Report, Findings for Columbia Army Air Base and Associated Sites. June 1994. U.S. Army Corps of Engineers, Huntsville District* and other FUDS related documents for the Columbia Army Air Base (I04SC044503) and Lake Murray Bombing Ranges (I04SC004001) from the PIRS website. Although the documents were prepared for the FUDS properties located outside of Fort Jackson, the documents were reviewed for information relating to Fort Jackson training activities. These documents provided no relevant information on munitions use at Fort Jackson.

3.2 ARCHIVAL/HISTORICAL AND OTHER RECORDS COLLECTED

The following subsections present the data collected from the various sources outlined in Section 3.1. Although additional records may have been reviewed from the sources presented above, the records listed in this section represent the data that was determined to be applicable to the development of the HRR and CSMs for Fort Jackson.

3.2.1 Documents/Reports

The following table is a list of documents that provided relevant information for the former range and training areas within Fort Jackson.

Table 3-1: Summary of Documents and Relevant Information.

Document Name	General History	General Installation Information	Munitions Use	MC
Confirmatory Sampling Report for Solid Waste Management Units 5, 11, 18, 19, 24, 27, 29, 31, 32, 33, 34, 35, 38, 39, 40 and Area of Concern C, Ft. Jackson, South Carolina. Ecology and Environment, Inc. July 1997.	X	X		
Soil Background Study Report for the Fort Jackson Military Installation, Columbia, South Carolina. Ecology and Environment, Inc. January 2001.	X			
Supplemental Confirmatory Sampling Report for Solid Waste Management Units 5, 11, 29, 33, 34, 38 and Area of Concern C, Fort Jackson, South Carolina. Ecology and Environment, Inc. April 2001.		X		
Fort Jackson, South Carolina Integrated Cultural Resources Management Plan (ICRMP). United States Army Environmental Center. June 2000, Revised April 2002.	X	X

3.2.2 Archival Records

3.2.2.1 Correspondence (Historical)

The following correspondence was obtained from the National Archives. Copies have been included in Appendix B.

- Correspondence regarding Small Arms Firing Manual, September 18, 1917
- Correspondence regarding Small Arms Target Ranges for Divisional Training, October 11, 1917
- Correspondence regarding Depopulation of Area Beyond Target Range, December 17, 1917

- Correspondence regarding Completion Report of Camp Jackson, Constructing Quartermaster, Camp Jackson, January 17, 1918

- Correspondence regarding Final Report of Plans and Descriptions of Camp and Camp Utilities, January 19, 1918

- Correspondence regarding Report on Small Arms Range, Camp Jackson, F. H. French, Brigadier General, July 23, 1918

- Correspondence regarding Firing on Machine Gun Range, Thomas Ryan, 2nd Lieutenant, F.A., September 23, 1918

- Memorandum regarding General Completion Report on North Camp Jackson as abandoned February 28, 1919, H. J. MacDonald, Captain, Quartermaster Corps, Constructing Quartermaster, February 28, 1919

- Correspondence regarding Daily Bulletin No. 32, February 11, 1920

- Correspondence regarding Daily Bulletin No. 39, February 19, 1920

- Correspondence regarding Daily Bulletin No. 42, February 24, 1920

- Correspondence regarding Daily Bulletin No. 47, March 3, 1920

- Correspondence regarding Daily Bulletin No. 77, April 15, 1920

- Correspondence regarding Daily Bulletin No. 96, May 10, 1920

- Correspondence regarding Daily Bulletin No. 105, May 22, 1920

- Correspondence regarding Answers to Questionnaire, Harry R. Lee, Colonel, Infantry, Commanding, June 29, 1920

- Correspondence regarding Rifle Range, Maurice E. Barker, Captain, C.A.C., June 25, 1923

- Correspondence regarding Rifle Range, Maurice E. Barker, Captain, C.A.C., June 25, 1923

- Memorandum to the Assistant Chief of Staff, C. M. Roberts, Ordnance Officer, August 1, 1923

- Correspondence regarding Construction of Training Aids, R. W. Strickland, 1st Lieutenant, A.G.D., Assistant Adjutant General, February 24, 1941

- Memorandum regarding Training Facilities, February 24, 1941
- Correspondence regarding General Orders Number 36, F. V. M. Dyer, Lieutenant Colonel, Infantry, Adjutant, June 11, 1941
- Memorandum regarding Platoon Combat Firing Proficiency Tests, Training Memorandum Number 33, F. R. Keeler, Lieutenant Colonel, Adjutant General's Department, May 26, 1942
- Correspondence regarding Training Aids, J. V. V. Shufelt, Colonel, General Staff Corps, Director, Operations and Training Division, October 5, 1942
- Correspondence regarding Post Range Regulations, General Orders Number 63, A. T. Murphey, Colonel, F.A., Adjutant, December 3, 1942
- Correspondence regarding Moving Vehicle Range, Stuart Lewis, Lieutenant Colonel, G.S.C., Chief, Training Branch, December 10, 1942
- Correspondence regarding Safety Limits of Ranges, Headquarters Army Ground Forces, Army War College, December 15, 1942
- Correspondence regarding Post Range Regulations, General Orders Number 25, A. T. Murphey, Colonel, F.A., Adjutant, July 8, 1943
- Correspondence regarding Post Range Regulations, General Orders Number 18, Joseph P. O'Hara, Major, A.U.S., Adjutant, March 16, 1944
- Report regarding Analysis of Fort Jackson, SC, Post War Utilization Studies, September 1945
- Correspondence regarding Estimate of Funds, Lynden R. Anderson, Major, Ordnance Department, Assistant S-4, February 18, 1947
- Correspondence regarding Construction of Ranges, John R. Lucas, Captain, Infantry Range Officer, April 25, 1947
- Correspondence regarding Historical Report and 1949 Fort Jackson Range Regulations, G. H. Decker, Major General, Commanding, June 17, 1949
- Memorandum regarding 1950 Fort Jackson Range Regulations, F. J. Reese, Lieutenant Colonel, A.G.D., Adjutant, April 15, 1950
- Correspondence regarding Training Report, 31st Infantry Division, Lother B. Sibert, Lieutenant Colonel, G.S.C., April 10, 1951

- Correspondence regarding Supply Status, 31st Infantry Division, Clifford P. Morrison, Lieutenant Colonel, G.S.C., 10 April 1951

3.2.3 Maps/Drawings

The following maps and drawings were obtained from the National Archives:

- Cantonment Realty Company, July 18, 1917
- General Layout, Camp Jackson, Columbia, SC, September 1917
- Location Map, Camp Jackson, Columbia, SC, 1918
- Key Map of Property, Camp Jackson, SC, June 1918
- Special Military Map, Camp Jackson, SC, 1920
- Jackson National Forest, SC, December 1926
- Annex No. 1 Firing Ranges, 1946

The following maps and drawings were obtained from Fort Jackson:

- General Map, Camp Jackson, SC, March 1919
- Fort Jackson and Vicinity, 1949
- Location Map, Fort Jackson, SC, 1952
- Training Facilities Map, February 17, 1955
- Training Facilities Map NR 2, January 3, 1956
- Basic Information for Master Plan: Range and Training Areas Map, Fort Jackson, SC, June 1957
- Master Plan, Fort Jackson, SC, August 1969
- Forestry Field Map, Fort Jackson, SC, May 1993
- DLE-PSESD Installation Field Map, Fort Jackson, SC, September 2000
- DLE-ENRD Installation Field Map of Fort Jackson, SC, July 2001

- Military Installation Map, Fort Jackson, SC, May 2003

3.2.4 Photographs/Aerial Photographs

a) Photographs

The following photographs were obtained from the National Archives:

- Salerno Range, Fort Jackson, SC, October 25, 1965
- Saint Lo, Fort Jackson, SC, October 25, 1965
- Combat Support Training, Fort Jackson, SC, September 15, 1969

b) Aerial Photographs

The following aerial photographs were obtained from the National Archives:

- RG145 SC302, 1938
- RG145 SC307, 1939
- RG145 SC313, 1939
- RG145 4583, June 1943

The following aerial photographs were obtained from Fort Jackson:

- 93 VV 11PTV M348 311RW, October 3, 1947
- 129 VV 11PTV M384 311RW, October 3, 1947
- 131 VV 11PTU M384 311RW, October 3, 1947
- 134 VV HPTV M348 311RW, October 3, 1947
- ATA-2P-42, March 1955
- ATA-2P-46, March 1955
- ATA-5AA-192-L, 1959
- ATA-5AA-197-L, 1959

- ATA-5AA-22-R, 1959
- ATA-1GG-39, February 1966
- ATA-1GG-43, February 1966
- ATA-1MM-165, November 1970
- ATA-1MM-199, November 1970
- ATA-1MM-265, November 1970
- ATA-1MM-193, December 1970
- ATA-1MM-198, December 1970

3.2.5 Interviews

The following interviews were conducted to collect information for the HRR. Interview records from these interviews are included in Appendix C.

Fort Jackson Environmental Department – The data collection team interviewed Mr. Lahiri Estaba, the Installation Restoration Program (IRP) Manager, on June 16, 2004, while at the installation for the site visit. Mr. Estaba is an on-site contractor and has worked at Fort Jackson for over nine years. Mr. Estaba is responsible for the installation's RCRA permit and Solid Waste Management Units (SWMUs) that are undergoing corrective action. He was familiar with the locations of the IRP sites and their soil and groundwater data, and provided information regarding those sites in relation to nearby MMRP sites. This information has been incorporated into site descriptions in this report. Information is also shown on Map 3-1, included at the end of Section 3. The IRP sites that were discussed included SWMU 1, SWMU 17, SWMU 21, and SWMU 34. In addition, the installation has completed surface and near-surface soil background studies. Mr. Estaba provided the data collection team with copies of these reports.

The data collection team also interviewed Mr. James McCracken, the installation's National Environmental Policy Act Coordinator, on June 18, 2004, while at the installation for the

site visit. Mr. McCracken has been at the installation for more than 15 years and provided historical information regarding the MMRP sites. Additional range uses in the cantonment area were discussed, including the numerous small arms ranges used over the years. He noted that the FJFC was also used as a 40-mm practice grenade range. Mr. McCracken was also familiar with the hand and rifle grenade range use near the Weston Lake Recreation Area. Mr. McCracken provided a copy of an historical installation map showing the cantonment area (Cantonment Area, Ft. Jackson, SC, Sheet 1 of 3, September 1945 Army Map, SVC War Department).

Fort Jackson Range Control – The data collection team interviewed Mr. Wyatt, the Range Officer, on June 18 and July 8, 2004, while at the installation for the site visit. Mr. Wyatt provided maps and documents regarding the MMRP ranges. The team discussed the historical range uses and range locations in the cantonment area. Mr. Wyatt noted that the area where the Live Hand Grenade Court 2 was depicted on maps had been extensively disturbed during the 1970s and 1980s when the area was used for field fortification training. Mr. Wyatt also discussed the hand grenade and rifle grenade ranges near Weston Lake. He agreed that the locations of the sites vary on different installation maps and that it appeared both hand grenade and rifle grenade use may have occurred at the Hand Grenade Court No. 2 and the Rifle Grenade Range NR 2. Mr. Wyatt provided copies of relevant documents, maps, and range fans sketches for the team's use.

The data collection team interviewed Staff Sergeant (SSG) Mark Wood on June 17, 2004, while at the installation for the site visit. SSG Wood escorted Malcolm Pirnie personnel to the FJFC Range and the Hand Grenade Court No. 2 and Rifle Grenade Range NR 2 Ranges located in the Weston Lake Area. SSG Wood provided a general description of the current uses in the vicinity of the closed ranges. SSG Wood could not provide much historical information on the ranges because he had only been stationed at Fort Jackson for three years.

Fort Jackson Forestry Office – The data collection team interviewed Mr. John Maitland, the Lead Forester, on June 16, 2004, while at the installation for the site visit. Mr. Maitland was familiar with the ranges, especially the Hand Grenade Court No. 2 and Rifle Grenade NR 2 Range near the Weston Lake Area. He noted that there were inconsistencies in how these ranges were shown on installation maps over the years. Mr. Maitland is responsible for managing the forestry resources at the installation. As such, he has been at the sites for logging purposes. Recently, longleaf pines have been planted adjacent to the FJFC. Logging has taken place at the rifle and hand grenade ranges near Weston Lake. Mr. Maitland noted that these areas have been surface cleared. He also provided aerial photographs of the installation for review. Relevant sections of the aerials were copied while at the installation, and they served as a primary source of site-specific information for the HRR.

Fort Jackson Engineering Office - The data collection team interviewed Mr. James Murphy, Engineering Technician, on July 28, 2004 via telephone. Mr. Murphy was contacted about the June 1, 1957 Basic Information for Master Plan, Range and Training Areas Map that he provided to us during the CTT Range Inventory data collection. The map legend was faded in several areas, and information was needed for the HRR. Mr. Murphy referred the team to the Fort Jackson Museum for a copy of the map.

Fort Jackson Museum – The data collection team interviewed Ms. Bessie Williams and Mr. Fred DeMag. Both were helpful in identifying historical maps showing the ranges.

Fort Jackson Real Property Office - The data collection team interviewed Mr. Thomas Peel, the Real Property Officer, on July 28, 2004 via telephone about real property records for range use and closure dates. Mr. Peel stated that the team would need to speak to Mr. Wyatt of Range Control for information. He stated that he does not receive information on range use, but noted that there have been no property boundary changes associated within the team's areas of interest.

Fort Jackson Wildlife Office - The data collection team interviewed Mr. Mark Dutton, the Natural Resource Specialist, on June 16, 2004, while at the installation for the site visit. Mr. Dutton provided maps showing cultural resource sites near the MMRP ranges. Other than a cemetery located north of the Hand Grenade Court No. 2 and Rifle Grenade Range NR 2 near Weston Lake, no cultural resources were identified in the other than operational areas.

3.3 PHASE 3 ARMY RANGE INVENTORY RESULTS

The purpose of the *Closed, Transferring, and Transferred Range/Site Inventory Report for Fort Jackson, South Carolina,* Malcolm Pirnie, June 2003, was to identify CTT ranges that are not within the operational training areas at Fort Jackson. The specific requirements of this investigation included: mapping CTT ranges and sites with UXO, DMM, or MC; collecting and preparing the data for inclusion in the Army Range Inventory Database; conducting an assessment of explosive safety risk using the Risk Assessment Code (RAC) on each CTT range or site; and determining which sites potentially qualify for the MMRP.

The CTT Range Inventory identified ten closed ranges totaling 407 acres within the installation's boundaries. The ranges and associate acreage are identified as follows: 1000-Yard Range (seven acres), 600-Yard Range (19 acres), Andrew Jackson Range (15 acres), FJFC (54 acres), Hand Grenade Court No. 2 (three acres), Live Hand Grenade Court 2 (three acres), Machine Gun Range (three acres), Mortar Range (112 acres), Rifle Grenade Range NR 2 (90 acres), and Submachine Gun Area (101 acres). The inventory summaries for these ranges are presented in Section 2.2.

The RAC process required the completion of a worksheet that consisted of a series of questions regarding each CTT range or site. Based on the results of the worksheet, a relative score (RAC score) for each area was assigned. The RAC score is an estimate of the relative explosives safety risk, which was reported as a number from one (high explosives safety risk) to five (negligible explosives safety risk). The RAC scores for the ranges/sites evaluated during the CTT Range Inventory are summarized in Table 3-2. The RAC scores

were developed based on the findings during the CTT Range Inventory and do not reflect new or additional information regarding these ranges/sites obtained during the HRR.

Table 3-2: CTT Range Inventory Range/Site RAC Scores

Range/Site Name	Munitions Type	RAC Score
1000-Yard Range	Small arms	5
600-Yard Range	Small arms	5
Andrew Jackson Range	Small arms	5
FJFC	Small arms	5
Hand Grenade Court No. 2	MEC	2
Live Hand Grenade Court 2	MEC	3
Machine Gun Range	Small arms	5
Mortar Range	MEC	2
Rifle Grenade Range NR 2	MEC	2
Submachine Gun Area	Small arms	5

3.4 SUMMARY OF OTHER PREVIOUS INVESTIGATIONS

Based on the data repositories reviewed for the HRR, the following previous investigations were identified which contained information pertaining to munitions use and/or relevant environmental data at Fort Jackson.

Confirmatory Sampling Report for Solid Waste Management Units 5, 11, 18, 19, 24, 27, 29, 31, 32, 33, 34, 35, 38, 39, 40 and Area of Concern C, Ft. Jackson, South Carolina - July 1997

This report describes CS investigations performed at 14 SWMUs and one area of concern. The report was written to meet the requirements of Fort Jackson's RCRA permit issued in October 1991. The report provides an historical overview of Fort Jackson and describes its environmental setting. The majority of the SWMUs evaluated in this report are in the

cantonment area, including SWMU 34, which is located near MMRP sites/ranges in the cantonment area.

SWMU 34 is the former location of a 30-foot by 30-foot concrete wash pad and a 400-gallon capacity oil/water separator that received vehicle wash water containing oil and grease. This unit is located on the eastern side of the cantonment area north of Semmes Road and approximately 250 feet northwest of the sanitary landfill. This area is in close proximity to the Transition Range located in the cantonment area, which is discussed in Sections 4 and 5 of this HRR. No significant contamination was found at SWMU 34. Some metals were present at concentrations that slightly exceeded the maximum background levels measured at Fort Jackson.

Supplemental Confirmatory Sampling Report for Solid Waste Management Units 5, 11, 29, 33, 34, 38 and Area of Concern C - April 2001

The results of this supplemental investigation combined with the results of the previous CS efforts performed in July 1997 (discussed above) were used to decide if further actions were needed at any of these sites. With respect to SWMU 34, the supplemental CS was conducted to determine if contamination was present in this area that was associated with high Organic Vapor Analyzer readings recorded during the 1995 CS investigation. This supplementary CS recommended NFA at SWMU 34. This report also provided limited historical information on Fort Jackson.

Soil Background Study Report for the Fort Jackson Military Installation Columbia, South Carolina - January 2001

This report presents the procedures, methodologies, and data from the Background Soil Study for the Fort Jackson Military Installation. The objective of this study was to develop comprehensive data sets characterizing levels of metals in the soil at Fort Jackson. The report concluded the following:

1. Sample depth (at least within a range significant for risk analysis) does not appear to be a meaningful discriminator of background soil concentrations.

2. Sample location (undeveloped versus developed) and soil type, or some combinations thereof, do appear to be discriminators for background soil concentrations.
3. Three sets of background soils are needed for Fort Jackson: sandy soils of developed areas, sandy soils of the undeveloped areas, and clayey soils combining both areas.

This report also provided a brief background and history of Fort Jackson, as well as an environmental sampling history.

Integrated Cultural Resources Management Plan (ICRMP*)* - June 2000, Revised April 2002

This report was written to meet the legal compliance requirements of federal historic preservation laws and regulations. The ICRMP establishes priorities for the identification of and standards for the evaluation of historic properties on Fort Jackson and provides a schedule designed to accomplish program objectives during a five–year period. The vast majority of land on Fort Jackson has been inventoried for cultural resources and historic properties. The ICRMP reported that a total of 662 archaeological sites have been identified at Fort Jackson to date. With the exception of 11 cemeteries recorded as archaeological sites, these resources require no further management consideration. Twelve sites are considered eligible for the National Registry of Historic Places (NRHP). Ninety-six sites have been recommended as potentially eligible for the NRHP. These resources must be preserved in place until their exact NRHP status is determined. There are no eligible or potentially eligible NRHP sites located on the sites being evaluated as part of the MMRP.

The ICRMP reported that one federally listed animal species exists on Fort Jackson: the Red-cockaded Woodpecker. The bird nests in aging pines, lives in family groups and inhabits park-like territories or clusters of 1,500-foot radii. There are 13 active clusters and 39 inactive clusters on the Fort Jackson installation. This population is routinely monitored, and the surrounding forest is managed to encourage survival of the groups. One cluster is located within close proximity to the Weston Lake Area, including the Rifle Grenade Range NR 2.

Revised Final Phase II RFI Report for Wonsan (SWMU 12) and Inchon (SWMU 17) Explosive Ordnance Disposal Sites - March 2003

The purpose of this report was to present the additional information collected during the 1999 and 2000 Phase II RFI activities, incorporate the new data, and perform an updated human health and ecological risk assessment of the two EOD sites, Wonsan (SWMU 12) and Inchon (SWMU 17). The Submachine Gun Range and the Mortar Range, which are being evaluated in the MMRP, are located in the Weston Lake Area. SWMU 17 is located approximately one and one-half miles east of Weston Lake. This report was helpful in providing general information about the Weston Lake Area. This document also reported that two federal and/or state listed threatened and endangered species are present at Fort Jackson: the Rough-leaved Loosestrife and the Red-cockaded Woodpecker.

Final U.S. Army Closed, Transferring and Transferred Range/Site Inventory for Fort Jackson, SC - June 2003

The objective of this report was to present the CTT Range Inventory for Fort Jackson. In preparation of this report, historical research was conducted to identify CTT ranges and sites subject to the inventory and their locations, periods of use, and associated types of UXO, DMM, or MC. This report contains a historical background of Fort Jackson and installation summary and is discussed further in Section 3.3.

RCRA Facility Investigation SWMU 1 Phase II RFI Report - March 2004

SWMU 1, also known as the former Sanitary Landfill No. 3, is closed and is located north of Semmes Road and east of Chesnut Road within the cantonment area. SWMU 1 is also located within the Transition Range's safety/buffer area. Phase II sampling for SWMU 1 was completed in 2003; data sets collected during the Phase I and Phase II efforts were combined to complete the RFI. This document reported that ten compounds (chromium, dieldrin, acetone, methylene choride, benzo(a)anthracene, 2,4-Dinitrotoluene, n-nitroso-di-n-propylene, 4-Chloro-3-methylphenol, 4-Nitrophenol, and pentachlorophenol) were present in soil samples at concentrations that exceeded their respective site-specific screening levels. However, these chemicals were considered not to represent a significant threat to shallow

groundwater. Therefore, further investigation to evaluate the potential for migration to groundwater was not recommended.

2004-2008 Integrated Natural Resources Management Plan (INRMP) and Environmental Assessment – April 2004

The purpose of the INRMP is to guide the implementation of the natural resources program for Fort Jackson from 2004 to 2008. The program is designed to conserve Fort Jackson's land and natural resources and helps to ensure compliance with environmental laws and regulations. The INRMP helps to endure the maintenance of quality training lands to accomplish Fort Jackson's critical military mission on a sustained basis and to ensure that natural resources conservation measures and Army military mission activities are integrated and consistent with federal stewardship requirements. The INRMP provided thorough descriptions with respect to Fort Jackson's historical background, cultural resources, physical environmental setting, biological resources, and natural resources. The INRMP is referenced throughout this HRR.

Fort Jackson Range Architectural Inventory Construction Engineering Research Laboratory, April 2004

This document is an Historic American Buildings Level IV Survey prepared to determine eligibility for inclusion on the NRHP for the following buildings and landscapes: 41 ranges, three bivouac regions, and 29 buildings in the Fort Jackson cantonment area and two structures neither on the ranges nor in the cantonment area. This report concluded that none of the ranges, buildings, or landscape elements evaluated in this report at Fort Jackson are eligible for the NRHP under any of the National Register Criterions. Other than the Andrew Jackson Range, none of the MMRP sites were discussed in this report. However, the report did include maps showing ranges and range fans for the installation for 1946 and 1949. These maps were utilized as source data for the HRR.

The Cold War in South Carolina, 1945-1991 – An Inventory of Department of Defense Cold War Era Cultural and Historical Resources in the State of South Carolina – Second Interim Report U.S. Army Environmental Legacy Program

This report provided a detailed chronological historical background of events and activities conducted at Fort Jackson from 1917 through 1992. Pertinent information from this report has been incorporated into the HRR.

4 SUMMARY OF FINDINGS

4.1 IN DEPTH CHRONOLOGICAL HISTORY OF INSTALLATION

The installation dates back to 1917 when it was first opened as Camp Jackson. Camp Jackson was originally constructed on a 1,200-acre tract of land donated to the Federal Government by the citizens of the City of Columbia. In addition to the 1,200 acres donated by the City of Columbia, the Army purchased additional land bringing the total area of Camp Jackson to 22,000 acres. By 1918, approximately 45,000 military personnel were actively training at the installation, which was named in honor of Major General Andrew Jackson (seventh President of the U.S.). Camp Jackson remained active until July 27, 1921, when it was abandoned.

A wrecking company was called in to dismantle the camp after it was abandoned. The wrecking company was still at work tearing out sewer and water lines when, in 1925, the War Department decided to use the post again as a training camp for the SC National Guard. From 1925 to 1939, the facility was controlled by the state and was used as an encampment area for National Guard troops.

In 1939, the demands of war brought the area again under federal control. The facility was designated as Fort Jackson and was organized as an infantry training center. In 1940, the installation was enlarged, by land purchase, to 52,000 acres. During that time, four firing ranges and more than 100 miles of road were constructed. In 1946, Fort Jackson became an Army replacement training center when Camp McClellan was closed. During the 1950s, Fort Jackson served as an active duty headquarters for Alabama and Mississippi National Guard units and was occupied by various infantry divisions.

In 1968, the installation area was annexed into the City of Columbia. It was re-designated as an Army training center in 1973. The current and primary mission of Fort Jackson is to train initial entry recruits for duty as soldiers for Army units. Throughout the years, the

installation has grown to its current size of 52,000 acres. A chronological list of significant historical events is provided in Table 4-1.

Table 4-1: Timeline of Significant Events

Time Period	Significant Events
1900-1920	• 1917: Installation first opened as Camp Jackson. • 1918: Approximately 45,000 military personnel were training at the installation.
1920-1940	• 1921: Camp Jackson was abandoned. • 1925 - 1939: Installation was controlled by the state and used as an encampment for National Guard troops. • 1939: Installation was designated as Fort Jackson and was organized as the infantry training center.
1940-1950	• 1946: Fort Jackson became an Army replacement training center.
1950-1960	• 1950s: Fort Jackson served as an active duty headquarters for Alabama and Mississippi National Guard units.
1960-present	• 1968: Installation area was annexed into the City of Columbia. • 1973: Fort Jackson was re-designated as an Army training center.

4.2 MMRP SITE FINDINGS

Information not previously identified regarding the cantonment area, FJFC, and the Weston Lake Area sites was obtained through the research performed for this HRR. This information resulted in modifications to the original MMRP site descriptions and boundaries formulated during the CTT Range Inventory, which are presented in Section 2.2. The locations of the cantonment area, FJFC, and Weston Lake Area are shown on Map 4-1.

Based on the information obtained during the HRR, additional MMRP sites were identified within the cantonment area. These sites, as well as the sites identified during the CTT Range Inventory, are discussed in Section 4.2.1. Additional munitions types, including MEC, were identified for the FJFC. The westernmost portion of the FJFC was determined to have had no historical range use, thereby reducing the total acreage for the FJFC. Details regarding these findings are included in Section 4.2.2. Additional munitions types and acreage changes were identified for the Weston Lake Area sites. This information is provided in Section 4.2.3.

The CTT Range Inventory listed the Andrew Jackson Range as one of the ten MMRP sites. The Andrew Jackson Range was originally a military small arms range that had been closed. The site has been turned over to the Fort Jackson MWR Department for operation as a recreational small arms shooting range. Because of its current activity and the ongoing releases that have occurred there after September 30, 2002, it was determined that this site is not eligible for evaluation as part of the Fort Jackson SI.

4.2.1 Cantonment Area Ranges/Sites

The cantonment area, which is located in the western portion of Fort Jackson, contains three MMRP sites. Four ranges (i.e., the 1000-Yard, 600-Yard, Machine Gun, and Live Hand Grenade Court No. 2 ranges) were discussed in the CTT Range Inventory. Thirteen additional sites were identified during the preparation of the HRR. Due to a change of the operational range boundary, seven of these sites were determined to not be eligible for evaluation as part of the Fort Jackson SI. Map 4-2 shows the cantonment area range details.

For the purposes of this report, the cantonment area MMRP sites have been combined into the following range groups: Camp Jackson Ranges, Small Arms Ranges East of Chesnut Road, and Live Hand Grenade Court 2. The findings and modifications with respect to each site identified in the CTT Range Inventory, as well as the additional sites identified in the HRR, are presented in the following subsections. Map 4-3, included at the end of Section 4, shows the differences in the CTT Range Inventory and HRR range locations. Map 4-4, also included at the end of Section 4, highlights the cantonment area MMRP sites.

4.2.1.1 Camp Jackson Ranges

The Camp Jackson Ranges occupy 81 acres and include the following five small arms ranges: 1000-Yard Range, 600-Yard Range, 300-Yard Range, Machine Gun Range, and Pistol Range. The 1000-Yard, 600-Yard, and Machine Gun Ranges were identified in the CTT Range Inventory, whereas the 300-Yard and Pistol Range were identified in the HRR.

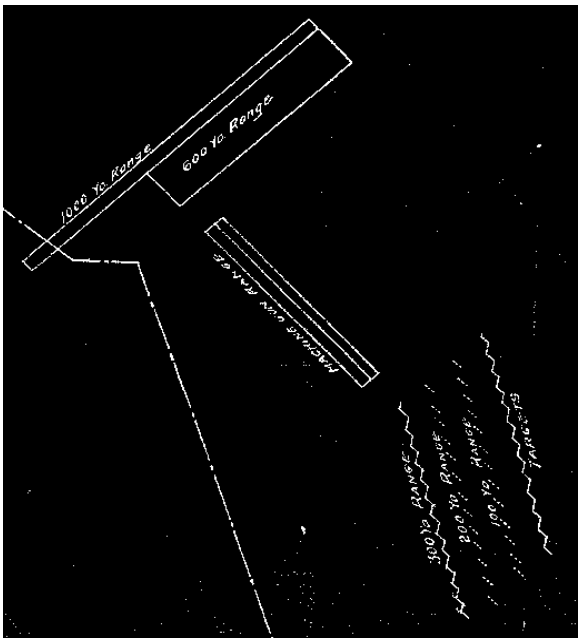

Figure 4-1: 1918 Location Map

The CTT Range Inventory reported that Camp Jackson had five rifle ranges in 1918, including 100-, 200-, 300-, 600-, and 1000-yard ranges. Based on information obtained during the CTT Range Inventory, these five ranges appeared to be located in a single range complex, with the 600-Yard and 1000-Yard Ranges located adjacent to each other and the 100-, 200-, and 300-yard ranges co-located within the 600-Yard Range boundary. During the HRR, a 1918 map (Figure 4-1) was obtained from the National Archives that showed the 300-Yard Range south of the 1000-Yard and 600-Yard Ranges. The 300-Yard Range included the 100- and 200-yard ranges. The 1918 map also depicts the Machine Gun Range. The Pistol Range is shown on a 1920 map. The Camp Jackson Ranges were used from 1918 through 1920 for small arms training.

1000-Yard Range

The 1000-Yard Range is described in the CTT Range Inventory as a former rifle range located near Washington Road and Ivy Road. During the research for this HRR, information was obtained that more accurately described the location and layout of the 1000-Yard Range. Based on review of historical maps, the 1000-Yard Range was located in the eastern portion of the cantonment area, just east of Chesnut Road and south of Hartsville Guards Road. This location is north of the 600-Yard Range and the Machine Gun Range, as identified in the CTT Range Inventory.

Historical correspondence indicated that construction of the 1000-Yard Range began in 1917, with the first operational use in early 1918. According to July 23, 1918 correspondence, the 1000-Yard Range had six targets located at 800 and 1000 yards. Based on historical documentation (i.e., letters, memorandums, and maps) the direction of fire was from west to east. Maps for Fort Jackson from 1918 (Figure 4-1) and 1919 depict the outline and configuration of the 1000-Yard Range. The 1920 Special Military Map depicts multiple gun emplacements, one of which is located in the general area of the 1000-Yard Range. Three ground targets and what appear to be two berms are also located in this area. Based on the range features shown on the 1920 map, the location of the 1000-Yard Range appears to be slightly north of where the CTT Range Inventory identified this range. Map 4-3 shows the CTT Range Inventory location of this range, as well as the revised location as determined by this HRR. The December 1926 Jackson National Forest Map does not depict the 1000-Yard Range. Based on the history of Fort Jackson, world events (e.g., end of World War I), and the documents and maps reviewed, it appears the range was used between 1918 and 1920.

600-Yard Range

The 600-Yard Range is described in the CTT Range Inventory as a former rifle range. As with the 1000-Yard Range, information was obtained during the HRR that more accurately described the location and layout of the 600-Yard Range. The range is located east of Chesnut Road and south of Hartsville Guards Road in the eastern portion of the cantonment

area. This location is south of the 1000-Yard Range and north of the Machine Gun Range, as identified in the CTT Range Inventory.

Historical correspondence indicates construction of the 600-Yard Range began in 1917, with the first operational use in early 1918. According to July 23, 1918 correspondence, the 600-Yard Range had a series of 200 targets located at 100, 200, and 300 yards (listed as short range targets) and 34 targets located at 500 and 600 yards (listed as mid range targets). The direction of fire was from west to east. Maps for Fort Jackson from 1918 (Figure 4-1) and 1919 depict the outline and configuration of the 600-Yard Range. The 1920 Special Military Map shows gun emplacements located in the general area of the 600-Yard Range. Three ground targets and what appear to be two berms located in the direction of fire are visible. Based on the locations of the gun emplacements, targets, and berms, the location of the 600-Yard Range appears to be slightly north of where the CTT Range Inventory identified this range.

Map 4-3 shows the CTT Range Inventory location of this range, as well as the revised location as determined by this HRR. The December 1926 Jackson National Forest Map does not depict the 600-Yard Range. Based on the history of Fort Jackson, world events (e.g., end of World War I), and the documents and maps reviewed, the range was used between 1918 and 1920.

300-Yard Range

The 300-Yard Range was a rifle range located south of the Machine Gun Range and north of the Live Hand Grenade Court 2. The 300-Yard Range included 100-, 200-, and 300-yard ranges. The 300-Yard Range is first shown on the June 1918 map and then again on the 1920 Special Military Map. The December 1926 Jackson National Forest Map is the last map to depict the 300-Yard Range.

A Completion Report of Camp Jackson, dated January 17, 1918, noted that the 300-Yard Range was located east of the cantonment area on a strip of land 13,200 feet wide and

42,000 feet long. A portion of this land, which was part of the 22,000 acres comprising Camp Jackson, was used for small arms training. The land configuration at the 300-Yard Range would not permit shooting directly from the firing trench to the target trench without danger of the bullets passing over the property line. Therefore, trenches were constructed in echelon (see Figure 4-1) to take advantage of the ridges/hills that were not parallel to the property line. This allowed for an easterly firing direction. The 50th Anniversary History 1917-1967 for Fort Jackson, prepared by the U.S. Army Training Center, includes a picture of the 300-Yard Range taken between 1917 and 1918. The picture shows the echelon configuration of the range, with target trenches and berms in the background (Figure 4-2).

Figure 4-2: 300-Yard Range

An October 11, 1917 Army memorandum written by the Adjutant General indicated that the 300-Yard Range was used for pistol firing. Camp Jackson's daily bulletins dated May 10 and 22, 1920 also indicated that there was pistol firing, confirming pistol use at the 300-Yard Range. An aerial photograph from 1959 (Figure 4-3) shows the remains of the 300-Yard Range echelon target area. Based on historical documents and correspondence, the 300-Yard Range was used from 1918 through 1920 by the Army and from 1920 through at least 1926 by SC National Guard troops.

Figure 4-3: 1959 Aerial Photograph

Machine Gun Range

The Machine Gun Range is described as a 1000-inch range. During the research for this HRR, information was obtained that more accurately described the location of the Machine Gun Range as east of Chesnut Road and south of Hampton Parkway in the eastern portion of the cantonment area. This location is south of the 1000- and 600-Yard Ranges, as identified in the CTT Range Inventory.

The Machine Gun Range is shown on the 1918 Location Map (Figure 4-1), the June 1918 map, the March 1919 General Map, and the 1920 Special Military Map. Historical correspondence indicates the construction of the Machine Gun Range began in 1917, with the first operational use in early 1918. According to July 23, 1918 correspondence, the Machine Gun Range had a series of 72 targets located on carriages that would be drawn on tracks toward the machine gun firing line during training exercises. The 50th Anniversary History 1917-1967 for Fort Jackson includes a picture of the Machine Gun Range taken between 1917 and 1918 (Figure 4-4). The direction of fire, as confirmed by historical documentation (i.e., letter, memorandums, and maps), was from west to east. The Machine Gun Range is not depicted on the December 1926 Jackson National Forest Map. Based on the history of Fort Jackson, world events (e.g., end of World War I), and the documents and maps reviewed, the range was used between 1918 and 1920.

Figure 4-4: Machine Gun Range

According to the *AR 750-10 Range Regulations for Firing Ammunition in Time of Peace,* typically light and/or heavy machine guns may have been used on 1000-inch rolling target machine gun ranges. The firing line was positioned 1000 inches in front of the targets. Probable ammunition used at the machine gun range includes 0.30-caliber, M1/5, (500-yard maximum range); 0.30-caliber, M2/3, (450-yard maximum range); and 0.50-caliber (7,500-yard maximum range).

Pistol Range

Evidence of this range was found on the 1920 Special Military Map. Gun emplacements (i.e., the firing point) were shown west of the Machine Gun Range. A backstop berm, which appears to be adjacent to a target area, is located north of the Machine Gun Range. Based on the configuration shown on the 1920 map, the direction of fire was northeast across the northernmost portion of the Machine Gun Range. A portion of the 1920 Special Military Map depicting the Pistol Range is shown in Figure 4-5. Because the range is only depicted on the 1920 map, it was likely constructed and used between 1919 and 1920.

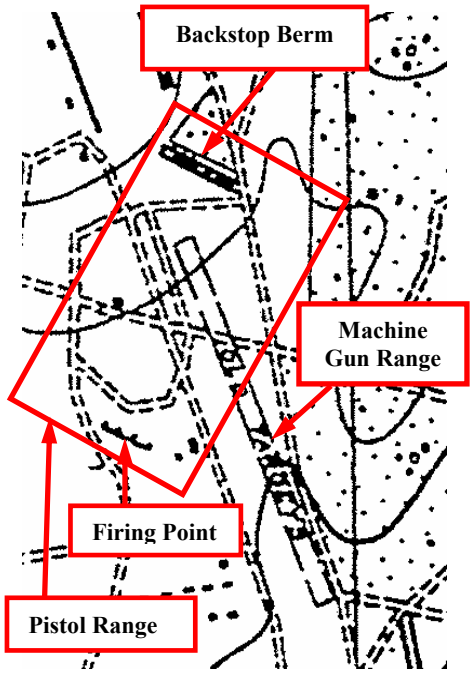

Figure 4-5: 1920 Special Military Map

Table 4-2, on the following page, summarizes historical use and overlapping range information for the Camp Jackson Ranges.

Table 4-2: Camp Jackson Ranges Historical Use Summary

Pistol Range			X		Small arms	Machine Gun Range, Transition Range, Pistol Range NR 2

4.2.1.2 Small Arms Ranges East of Chesnut Road

The Small Arms East of Chesnut Road include the following four ranges: Transition Range; 1000-Inch Range Nos. 14, 15, 16; Pistol Range NR 2; and the Landscape Target Range. These ranges, which comprise 546 acres, were discovered as a result of the research performed for this HRR. These ranges were generally used during time period of 1946 to 1970 and are discussed below.

Transition Range

The Transition Range was located east of Chesnut Road, north of Semmes Road, and south of Red Diamond and Hartsville Guards Roads. The firing direction was from west to east. The Transition Range and its associated range fan overlapped the majority of the CTT-identified cantonment area ranges (i.e., the 1000-Yard Range, 600-Yard Range, Machine Gun Range, and Live Hand Grenade Court 2). Additionally, the Transition Range and its associated range fan overlapped portions of the following HRR-identified ranges: the 300-Yard Range; Pistol Range; Pistol Range NR 2; 1000-Inch Range Nos. 14, 15, 16; and the Landscape Target Range.

Correspondence regarding range construction, dated April 25, 1947, indicates that the Transition Range originally was to consist of 11 lanes with the firing line located on the western portion of the range. This correspondence also states that range construction was to be completed by June 23, 1947. Range Regulations, dated May 24, 1949, indicate that there were 15 firing lines at that time. Targets were located at the following distances: six lanes had targets at 200, 300, and 500 yards; four lanes targets at 250, 300, 350, 400, 450, and 500 yards; one lane had targets at 100 yards; and four lanes had targets from five to 70 yards. The type of weapon fired at this range was identified in the Range Regulations as the M1 .30 Caliber Rifle.

The Transition Range, which is shown on both the 1946 and 1949 maps, was extended south to encompass the Live Hand Grenade Court 2 sometime between 1946 and 1949 (this coincides with the increase in firing lanes from 11 to 15 described in the historical correspondence). The 1946 map shows the Live Hand Grenade Court 2 located just south of the southwestern corner of the Transition Range, where as the 1949 map (Figure 4-6) shows the Live Hand Grenade Court 2 located within the southwestern corner of the Transition Range. A 1952 Location Map shows the Transition Range firing line (identified on the map as M-1 Trans #1 Range), but does not include the range fan. The 1955 Training Facilities Map and the 1956 Training Facilities Map NR 2 also shows the Transition Range.

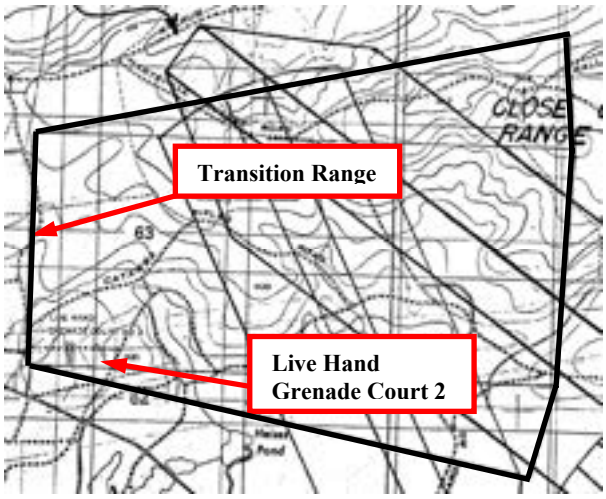

Figure 4-6: 1949 Fort Jackson and Vicinity Map

A Fort Jackson Basic Information Range Training Area Map, dated June 1, 1957, does not show the Transition Range. However, this map does show a Platoon Tactical Training Area (identified on the map as No. 309), Night Compass Course (No. 306), and Flame Thrower Area (No. 305) located just east of Chesnut Road where the westernmost portion of the

Transition Range was located. These three areas are only identified on the 1957 map (see Figure 4-7). Based on the historical correspondence and maps reviewed for the HRR, the period of use for the Transition Range was from 1947 to 1956.

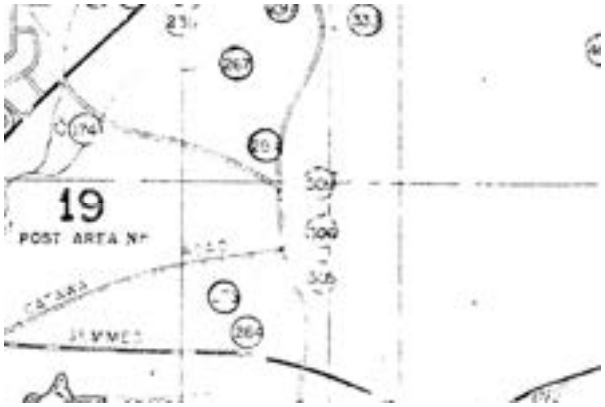

Figure 4-7: 1957 Basic Information Map

The *AR 750-10, Range Regulations for Firing Ammunition in Time of Peace* and *TM 9-855, Targets, Target Material, and Training Course Lay-outs* describe four general types of transition ranges used during the 1940s and 1950s. The first type of transition range was set up with firing lanes that had a single firing point and pop-up targets set at 200, 300, and 500 yards; each firing lane was approximately 60 yards wide. The second type of transition range was set up with firing lanes that had a single firing point and six stationary targets placed at random distances ranging from 200 to 500 yards; each firing lane was approximately 50 yards wide. The third type of transition range was set up without a limit of advance. This type of range consisted of up to ten firing lanes (each approximately 20 yards wide) that offered unique firing positions (i.e., fox holes, logs, etc.) and personnel transitioned along the firing line shooting from the various positions. Targets were placed at random distances out to 500 yards. The fourth type of transition range was set up with a limit of advance (typically no farther than 90 yards down range). This range utilized firing lanes in which personnel transitioned down-range while engaging pop-up targets positioned at various locations. Each lane was approximately 25 yards wide with earthen berms constructed between the firing lanes. Based on the historical documents reviewed, it appears that the Transition Range included a combination of these types of transition ranges.

1000-Inch Range Nos. 14, 15, 16

The 1000-Inch Range Nos. 14, 15, 16 is shown on the 1949, 1955, and 1956 maps. The 1949 map shows the 1000-Inch Range Nos. 14, 15, 16 located southeast of Golden Arrow Road and along the northeast side of Hartsville Guards Road, except for a small portion on the southwest side of Hartsville Guards Road. The firing point is located northeast of Hartsville Guards Road, with the direction of fire to the southeast. With the exception of a small area near the southern portion of the firing line, this range is overlapped by the Transition Range. When comparing the 1949 and 1956 maps, it was noted that the location of this range was shifted slightly to the south in the 1956 map. Map 4-2 illustrates the portion of this range that lies within the cantonment area.

Pistol Range NR 2

The Pistol Range NR 2 is shown on the 1952, 1955, and 1956 maps. This range is located east of Chesnut Road within the area identified as the Transition Range on the 1949 map. An aerial photograph from 1959 (Figure 4-8) shows the Pistol Range NR 2. Five berms that run in an east/west direction are visible in the photograph. These berms divided the range into separate firing areas. The firing points were located on the west side of the range with a target area located on the east side. A backstop berm located east of the firing lanes is also visible in the photograph. The Transition Range located north of the Pistol Range NR 2 is also visible in this aerial photograph.

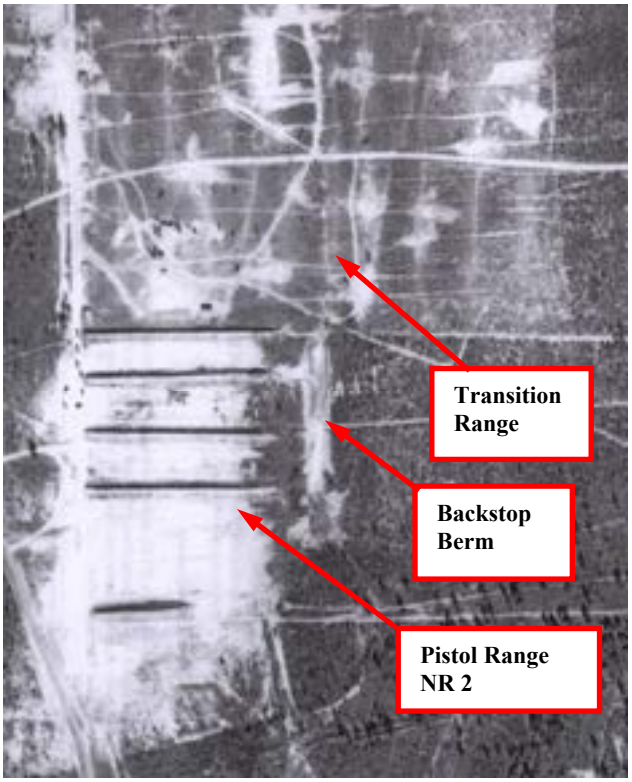

Figure 4-8: 1959 Aerial Photograph

Landscape Target Range

The Landscape Target Range is shown on the 1946 and 1949 maps. The maps show this range located south of Hartsville Guards Road, with a portion of the fan extending north across Hartsville Guards Road (Figure 4-9). The firing line was located southeast of the cantonment area, with the direction of fire to the northwest. The range fan extended northwest into the cantonment area. The Transition Range and 1000-Inch Range Nos. 14, 15, 16 overlap the portion of the Landscape Target Range that is located within the other than operational area.

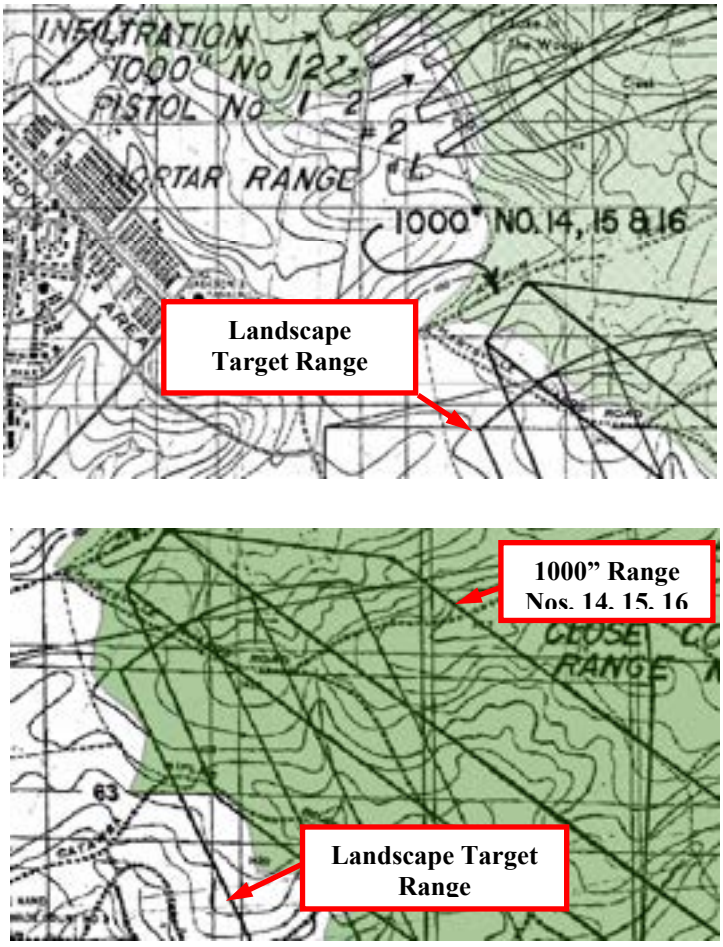

Figure 4-9: 1949 Fort Jackson and Vicinity Map with CTT Operational Boundary and Revised Operational Boundary

Based on information provided in the *AR 750-10, Range Regulations for Firing Ammunition in Time of Peace* and *TM 9-855, Targets, Target Material, and Training Course Lay-outs*, landscape targets were used for rifle practice on this type of 1000-inch range. The target set consisted of five black and white paper landscape targets that together made a panoramic picture of a landscape. The size of the panoramic picture was such that the features were recognizable at a distance of 1000 inches. Typically, .22 caliber weapons were fired at a Landscape Range and .30 caliber weapons were fired at a 1000-inch range.

Table 4-3 on the following page summarizes the historical use and overlapping range information for the Small Arms Ranges East of Chesnut Road.

Table 4-3: Small Arms Ranges East of Chesnut Road Historical Use Summary

4.2.1.3 Live Hand Grenade Court 2

The three-acre Live Hand Grenade Court 2 is described in the CTT Range Inventory as a former hand grenade training range. The Live Hand Grenade Court 2 is located east of Chesnut Road and north of Semmes Road in the eastern portion of the cantonment area. This range is located southwest of the Machine Gun Range as identified in the CTT Range Inventory. According to the CTT Range Inventory, the approximate period of use of the Live Hand Grenade Court 2 was from 1940 to 1950. Practice, as well as live, grenades may have been used on the range. The Live Hand Grenade Court 2 was first depicted on the Annex No. 1 Firing Ranges Map dated 1946 and last depicted on the Fort Jackson and Vicinity Map dated 1949 (see Figure 4-6). During the 1970s and 1980s, the area where the Live Hand Grenade Court 2 was located was used for field fortification training.

Based on descriptions included in the *AR 750-10, Range Regulations for Firing Ammunition in Time of Peace* and *TM 9-855, Targets, Target Material, and Training Course Lay-outs*, a typical live hand grenade court used during the 1940s consisted of a trench with targets and an impact area approximately 25 yards to the front of the throwing line. Targets consisted of a circular outline, a crater, and/or a foxhole. A danger area of approximately 600 feet would have been established around the entire range. The 1949 map shows several parallel lines running north to south that may indicate throwing lines and trenches. Based on the orientation of these lines, grenades were most likely thrown to the east and/or west.

Table 4-4 summarizes historical use and overlapping range information for the Live Hand Grenade Court 2.

Table 4-4: Live Hand Grenade Court 2 Historical Use Summary

4.2.1.4 Ranges North of Hampton Parkway

The Ranges North of Hampton Parkway (which are northeast of Golden Arrow Road) include the following seven ranges: 1000-Inch Range No. 11, 1000-Inch Range No. 12, Pistol Range No. 1, Pistol Range No. 2, Mortar Range NR 1, Mortar Range NR 2, and the Infiltration Course. Several of these ranges can be seen in Figure 4-9. According to the operational range boundary used for the CTT Range Inventory, small portions of these ranges are located within the other than operational range area. These ranges, which comprise 32 acres, were identified as a result of the research performed for this HRR. These ranges were generally used during the time period of 1946 to 1957. During review of the draft HRR, additional mapping sources were identified that more accurately identified the operational range boundary. Based on this revised boundary, the Ranges North of Hampton Parkway are located within the operational range area and are not eligible for evaluation as part of the Fort Jackson SI. Details regarding these ranges are provided in the following paragraphs for informational purposes only.

1000-Inch No. 11

This small arms range was shown on the 1949, 1952, 1955, and 1956 maps. The 1000-Inch No. 11 Range is shown within the operational area on the 1949 map; however, the remainder of the maps show small portions of this range (near the firing points) located within the other than operational area. The direction of fire for this range was to the northeast.

1000-Inch No. 12

Small portions of this small arms range (near the firing points) were shown to be located within the other than operational area on the following maps: 1949, 1952, 1955, and 1956. The direction of fire was to the northeast.

Pistol Range No. 1

Small portions of this small arms range (near the firing points) were shown to be located within the other than operational area on the following maps: 1949, 1955, 1957, and 1969.

It is noted that this range was not shown on the 1956 map. The direction of fire was to the northeast.

Pistol Range No. 2

Small portions of this small arms range (near the firing points) were shown to be located within the other than operational area on the 1949 map. The 1946 map shows a range similar in size and location to the Pistol Range No. 2; however, it is only labeled as "Pistol". The direction of fire for the Pistol Range No. 2 was to the northeast.

Mortar Range NR 1

This range was shown on the 1949, 1952, 1955, and 1956 maps. Small portions of the Mortar Range NR 1 (near the firing line) are shown within the other than operational area on the 1949, 1955, and 1956 maps. Information on the Mortar Range NR 1, including firing line location and type of munition fired (i.e., 4.2-inch mortar), were described the April 15, 1950 Range Regulations. The range regulations indicate that the 4.2-inch mortar had a maximum range of 1,800 yards. The direction of fire for the Mortar Range NR 1 was to the northeast.

Mortar Range NR 2

Small portions of this range (near the firing line) were shown to be located within the other than operational area on the following maps: 1949, 1955, and 1956. The Mortar Range NR 2 was located south of, and overlapped portions of, Mortar Range NR 1. The direction of fire for this range was also to the northeast.

Infiltration Course

This range is shown on the following maps: 1949, 1952, 1955, 1956, 1957, and 1969. The entire Infiltration Course is shown within the operational area on the 1949 map; however, the remainder of the maps show small portions of the range (mainly near the firing points and the area of the range where the course would have been set up) located within the other than operational area. The direction of fire for the range was to the northeast. The 1957 map also

lists an Infiltration Course No. 2, with a location immediately south of the Infiltration Course. Since the 1957 map is the only reference for the Infiltration Course No. 2 and it is located immediately south of the Infiltration Course, this range is grouped together with the Infiltration Course.

According to the *AR 750-10, Range Regulations for Firing Ammunition in Time of Peace* and TM *9-855, Targets, Target Material, and Training Course Lay-outs*, an infiltration course was set up in a level area with logs and small mounds of dirt for personnel to roll over. The ground would have contained shell holes, trenches, slit trenches, wire entanglements, stumps, sparse brush, and other obstacles. Machine guns were typically fired from fixed platforms at the front of the range and reduced charges of explosives were placed in craters throughout the course to create realistic conditions during training.

Table 4-5 summarizes the historical use and overlapping range information for the Ranges North of Hampton Parkway.

Table 4-5: Ranges North of Hampton Parkway Historical Use Summary

Table 4-6 provides a summary of the historical time-line analysis for the ranges located in the cantonment area based on the maps reviewed.

Table 4-6: Cantonment Area Map Summary

Date of Map	Map Title	Map Observations
1918-1926	1918 Location Map 1918 Key Map of Property 1919 General Map 1920 Special Military Map 1926 National Forest Map	The ranges observed during this time frame include the following: 1000-, 600-, and 300-Yard Ranges, Machine Gun Range, and the Pistol Range. The 1000- and 600-Yard Ranges are only shown on the 1918 and 1919 maps. The Pistol Range is only shown on the 1920 map.
1946-1957	1946 Annex No. 1 Map 1949 Fort Jackson and Vicinity Map 1952 Location Map 1955 Training Facilities Map 1956 Training Facilities Map NR 2 1957 Master Plan Map	The ranges observed during this time frame include the following: Live Hand Grenade Court 2, Transition Range, 1000-Inch Range Nos. 14, 15, 16, and the Ranges North Hampton Parkway. The 1946 and 1949 maps depict the Live Hand Grenade Court 2 and the Transition Range. The Transition Range was extended to the south to encompass the Live Hand Grenade Court 2 between 1946 and 1949. The Ranges North of Hampton Parkway include the following: 1000-Inch No. 11 and 12 Ranges, Infiltration Course, Pistol Ranges No. 1 and 2, and the Mortar Ranges NR 1 and NR 2.
1969	1969 Master Plan	This map shows three range fans overlapping the other than operational area: the Pistol No. 1 Range, the South Carolina Range, and an unlabeled/unidentified range fan. In each case, only small portions of each range fan overlap the other than operational area, and these areas are included in other ranges/range fans previously identified in the maps reviewed above.

4.2.2 Fort Jackson Flight Club

The FJFC is a 54-acre area located east of Wildcat Road just north of Shenandoah Road. The western portion of the FJFC has been improved for recreational R/C model airplane use. Data obtained during the CTT Range Inventory indicated that the FJFC area was used as a machine gun range from 1955 to 1979. Information not previously identified regarding the FJFC area was obtained through the research performed for this HRR. Based on the data reviewed, the area on the western-most portion of the FJFC did not have a historical range use. As such, the MMRP sites do not include this area. The FJFC MMRP sites include the FJFC Salerno Ranges (15 acres) and the FJFC Small Arms Ranges (27 acres). Map 4-5 and Map 4-6 at the end of this section show the revised HRR site boundary, as well as the various ranges/range fans that overlap the FJFC. Map 4-7 shows the FJFC MMRP sites.

Since no evidence of range activity is indicated on the 1946 Annex No. 1 Firing Ranges Map, it was assumed that range activities were initiated at the FJFC area in the time period between 1946 and 1949. The 1949 Fort Jackson and Vicinity Map depicts two ranges that overlap the FJFC. The Field Firing Machine Gun range and safety fan are oriented to the southeast and cover the majority of the northern and eastern portions of the FJFC. The safety fan for the Close Combat No. 2 range extends into the southeastern corner of the FJFC, as shown on Figure 4-10. The machine gun range is labeled on the 1952 Fort Jackson Location Map as MG Field Firing #1 (Figure 4-11) and is in the same general location as shown on the 1949 map.

Figure 4-10: 1949 Fort Jackson and Vicinity Map with FJFC Overlay

Figure 4-11: 1952 Fort Jackson Location Map with FJFC Overlay

Based on the maps reviewed, the machine gun range usage continued through 1955 and 1956. However, the range fan is significantly larger as depicted on the 1955 and 1956 Training Facilities Maps when compared with that on the 1949 and 1952 maps. The 1955 and 1956 (Figure 4-12) maps both show the presence of an unlabeled smaller range located within the Machine Gun Field Firing Range NR 1. The range fan shape indicates that it may have also been used as a machine gun range.

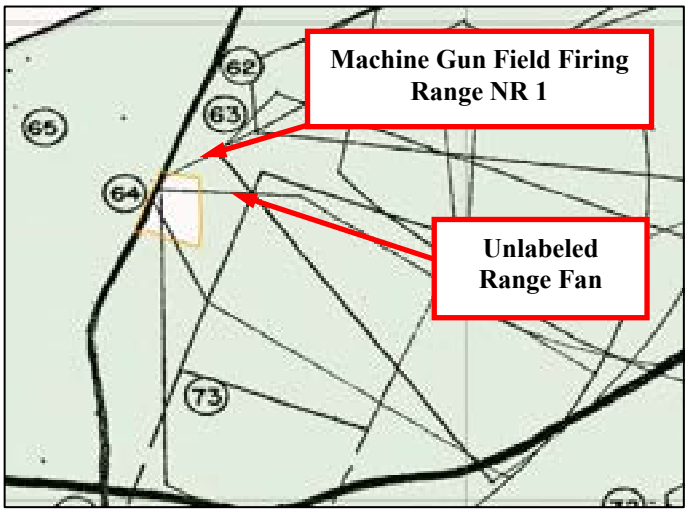

Figure 4-12: 1956 Training Facilities Map with FJFC Overlay

The 1957 map identifies a Technique of Rifle Fire w/ Distrib. and an M-1 Night Firing range that overlap the FJFC. The Technique of Rifle Fire w/ Distrib. range fan covers the northern and eastern portions of the FJFC. The M-1 Night Firing range covers the southern and eastern portions of the FJFC. The 1969 Master Plan Map (Figure 4-13) shows three range fans intersecting the FJFC. The two northern-most range fans are labeled Technique of Rifle Fire Range Salerno and the southern-most range fan is labeled Night Fire and Vision Range Saint Lo. The 1969 map uses the terms "Salerno" and "Saint Lo" for the first time to identify the ranges overlapping the FJFC.

Figure 4-13: 1969 Master Plan Map with FJFC Overlay

Information from a notebook located in the Range Control Office provided additional information on the usage of the Salerno and Saint Lo ranges during the 1960s and 1970s. A

sketch labeled Salerno Demonstration Overlay shows the relative location of four ranges: an M-60 machine gun range, an M-79 grenade launcher range, an M-72 Light Anti-tank Weapon (LAW) rocket launcher range, and an M18A1 mine range. A table attached to the sketch lists ammunition used at the Salerno range as of two dates. The January 3, 1964 entry lists .30-caliber and 7.62-mm ammunition. The April 9, 1970 entry lists LAW rockets, 40-mm grenades, and anti-personnel mines. This table also provides ammunition information for the Saint Lo range, with a January 3, 1964 entry indicating the use of .30-caliber and 7.62-mm ammunition. A historical photograph obtained from the National Archives depicts Army personnel training at an M-60 machine gun range (Figure 4-14). Fort Jackson personnel indicated that use of the Salerno and Saint Lo ranges ceased in 1973 and that the FJFC was established after 1982.

Figure 4-14: Firing at the M-60 range in 1969

The 1993 Forestry Field Map shows the presence of an "M79+40mm" rifle grenade range located in the northeastern-most portion of the FJFC. This location is shaded and labeled in the legend as "previous duds believed to have been cleared".

Aerial photographs from 1949 through 1970 were reviewed for evidence of training in the FJFC area. Disturbed areas were first visible on the 1955 aerial photograph. These areas were identified on other aerial photographs reviewed that were dated through 1970. The most evident land disturbance was shown in the 1955 aerial photograph (Figure 4-15).

Figure 4-15: Ranges Shown on 1959 Aerial Photograph

Table 4-7 below summarizes the historical time-line analysis of former range activities at the FJFC based on the maps reviewed.

Table 4-7: FJFC Map Summaries

Date of Map	Map Title	Map Observations
1946	Annex No. 1 Firing Ranges Map	No training was evident at the FJFC area.
1949	Fort Jackson and Vicinity Map	The Field Firing Machine Gun range and safety fan cover the majority of the northern and eastern portions of the FJFC. The Close Combat Range No. 2 safety fan extends into the southeastern corner of the FJFC.
1952	Location Map	The MG Field Firing #1 range location coincides with the Field Firing Machine Gun range shown on the 1949 map.
1955	Training Facilities Map	The Machine Gun Field Firing No. 1 range covers the majority of the FJFC. A smaller unlabeled range fan extends across the central portion of the FJFC.
1956	Training Facilities Map NR 2	The Machine Gun Field Firing Range NR 1 intersects the majority of the FJFC (same as 1955 map). The smaller unlabeled range fan shown on the 1955 map is also shown on the 1956 map.
1957	Basic Information for Master Plan Map	The Technique of Rifle Fire w/ Distrib. range fan covers the northern and eastern portions of the FJFC. The M-1 Night Firing range overlaps the Technique of Rifle Fire w/ Distrib. range and covers the southern and eastern portions of the FJFC. The Technique of Rifle Fire w/ Distrib. range is to the north of the M-1 Night Firing range and has a wider fan.
1969	Master Plan Map	Three range fans are shown that intersect the FJFC. The two northern range fans are labeled Technique of Rifle Fire Range Salerno. The southern-most range fan is labeled Night Fire and Vision Range Saint Lo.
1993	Forestry Field Map	A shaded area in the northeastern portion of the FJFC is labeled “M79+40mm”. The legend identifies this area as “previous duds believed to have been cleared”.

4.2.3 Weston Lake Area Ranges/Sites

The Weston Lake Area, located in the south-central portion of the installation, contains four closed ranges that were identified in the CTT Range Inventory (i.e., the Mortar Range, Hand Grenade Court No. 2, Rifle Grenade Range NR 2, and Submachine Gun Area). Due to a change of the operational range boundary, two of these sites (Hand Grenade Court No. 2 and Rifle Grenade Range NR 2) were determined to not be eligible for evaluation as part of the Fort Jackson SI. The findings and modifications based on information obtained during the HRR, including additional munitions types identified and acreage changes, are presented in the following subsections. Map 4-8 shows the Weston Lake Area range details. Map 4-10 shows the differences in the CTT Range Inventory and HRR range locations. Map 4-11 shows the Weston Lake Area MMRP sites.

4.2.3.1 Mortar Range

The 306-acre Mortar Range is located in the northern section of the Weston Lake Area, north of the Hand Grenade Court No. 2 and west of the Submachine Gun Area. According to the CTT Range Inventory, this area (identified as Mortar Range No. 8) was a buffer (safety) area for a mortar range that was used in the 1940s. The CTT Range Inventory also indicated that other ranges overlapped this area, including 8-inch, 105-mm, and 155-mm Howitzer ranges. The Submachine Gun Area also overlapped the Mortar Range. For acreage reporting purposes, the CTT Range Inventory depicted the Mortar Range and the Submachine Gun Area as a contiguous area divided in half, with the west side designated as the Mortar Range (112 acres) and the east side designated the as Submachine Gun Area (101 acres). However, based on the 1955 and 1956 Training Facilities Maps, the Mortar Range actually covers both the Mortar Range and most of the Submachine Gun Area reported in the CTT Range Inventory. For the HRR, the MMRP site boundary and acreage associated with the Mortar Range was increased to encompass the entire portion of the Mortar Range in the other than operational area, where as the Submachine Gun Area was decreased to include only the area not overlapped by the Mortar Range.

The 1952 Fort Jackson Location Map shows an area labeled "MTR #8" approximately 0.3 mile west of Washington Light Infantry Road. It is assumed that this is the location of the firing points, which are in an operational area. The 1955 and 1956 Training Facilities Maps show the Mortar Range No. 8 in the same location and oriented from west to east. Additionally, the 1955 map indicates the mortar range had 12 firing points. Both training maps depict a larger range fan almost directly overlapping Mortar Range No. 8. This fan is not labeled on either map and has not been identified on other maps reviewed. The majority of the 306 acres associated with the Mortar Range identified during this HRR consist of the portion of Mortar Range No. 8 that falls within the other than operational area at the Weston Lake Area. The remainder of the former Mortar Range No. 8, including the impact area, falls within the operational area. Mortar Range No. 8 was not identified on maps prior to 1952.

The 1955 Training Facilities Map shows two additional mortar range fans, Mortar Range No. 7 and Mortar Range No. 5A, overlapping the Mortar Range. Only the farthest extents away from the firing points of these two mortar range fans overlap the Mortar Range. The 1956 Training Facilities Map shows the same overlapping range fans; however, they are not labeled. The relationship of the three mortar range fans is depicted in Figure 4-16.

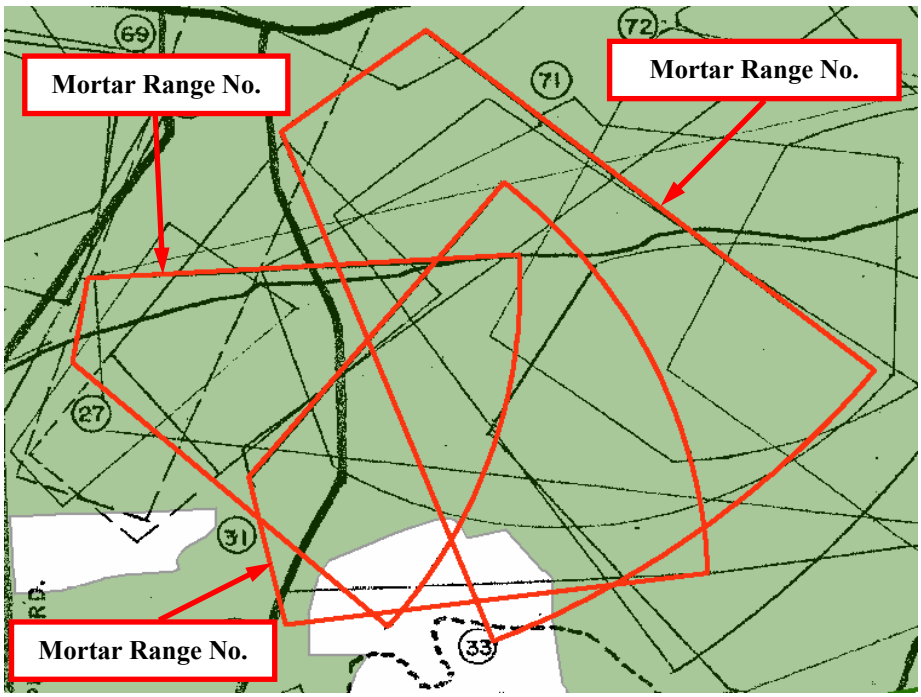

Figure 4-16: 1956 Training Facilities Map with Weston Lake Area Overlay

The 1957 Basic Information Map shows a mortar training area south of the eastern portion of the Mortar Range. However, no associated range fan was identified. The 1957 map also shows the Machine Gun Field Firing Range No. 1 and Machine Gun Field Firing Range No. 2 overlapping the eastern portion of the Mortar Range. These two ranges originate southeast of the Mortar Range, and only the surface danger zones associated with these ranges overlap the Mortar Range.

The 1969 Master Plan Map shows several range fans that overlap the Mortar Range. These range fans are identified as follows: 105-mm Howitzer Position No. 5; 155-mm Howitzer Position No. 2; 155-mm Howitzer Position No. 6; 155-mm Howitzer Position No. 8; and 8-inch Howitzer Position No. 9. These range fans originate from the west and overlap the entire Mortar Range. Map 4-9 shows the Howitzer range fan configurations. According to installation personnel, even though the Howitzer range fans overlap the Mortar Range, Howitzer-associated MEC are not likely to be found on the Mortar Range or other Weston Lake Area ranges because the firing points and impact areas of the Howitzer ranges were not located on or near the Weston Lake Area ranges. Review of the 1950 Fort Jackson Range Regulations and associated map overlays indicated that the Howitzer firing positions were located west of Washington Light Infantry Road and the impact area was northeast of the Weston Lake Area. Based on historical research, Howitzer ranges were operated by range personnel so that gun crews could restrict the gun's elevation and select the amount of propellant charge to control the downrange distance and hit the targets/impact areas. Short rounds are not anticipated at the Howitzer ranges based on the standard operating procedures. Because neither the firing points nor the impact areas for the Howitzer ranges lie in the other than operational range areas, these ranges were not evaluated under this HRR.

The 1969 map also shows the Machine Gun Field Fire No. 1, Cassino Range that originates from the south and overlaps the eastern portion of the Mortar Range. The Rifle Squad in Technique of Rifle Fire Range RSTT No. 1 originates from the north and overlaps the northeastern portion of the Mortar Range. Five additional range fans overlap the eastern

portion of the Mortar Range; however, these range fans are not labeled. No other maps reviewed show these unlabeled range fans.

The 1949 Fort Jackson and Vicinity Map does not show the Mortar Range; however, it does show the Dismounted Submachine Gun Range Nos. 1 and 2 fans and the farthest extent of the Close Combat Range No. 1 fan overlapping the Mortar Range. Neither the Mortar Range nor the Close Combat Range No. 1 appears on the 1946 Annex No. 1 Firing Ranges Map. This indicates that the Mortar Range was used in the 1950's rather than the 1940s as indicated in the CTT Range Inventory.

Aerial photographs from 1949 through 1970 were reviewed for evidence of mortar training in the Weston Lake Area. The portion of the Mortar Range in the other than operational area associated with the Weston Lake Area includes the safety fan, but not the firing points or impact areas of the Mortar Range. Evidence of mortar training in the Weston Lake Area was not observed in the aerial photographs, as expected based on the area being within the safety fan. Review of historical correspondence dating back to 1941 indicates that the Weston Lake (historically Weston Pond) Area was designated as off-limits for training. Based on the historical correspondence, the area surrounding Weston Lake has been used for recreational purposes since the 1940s.

4.2.3.2 Hand Grenade Court No. 2

The 18-acre Hand Grenade Court No. 2 is located in the northern portion of the Weston Lake Area, south of the Mortar Range. The CTT Range Inventory estimated that the period of use for this range was from 1944 to 1950. The acreage associated with the Hand Grenade Court No. 2 in the CTT Range Inventory was three acres. Based on additional information obtained during the research conducted for the HRR, the acreage associated with hand grenade training was increased to 18 acres. During review of the draft HRR, additional mapping sources were identified that more accurately identified the operational range boundary. Based on this revised boundary, the Hand Grenade Court No. 2 is located within the operational range area and is not eligible for evaluation as part of the Fort Jackson SI.

The following information obtained during the HRR is included for informational purposes only.

The Hand Grenade Court No. 2 is labeled on the 1952 Fort Jackson Location Map and is shown approximately 0.6 mile south of the Mortar Range No. 8. The location of Hand Grenade Court No. 2 appears to be just on the west side of Washington Light Infantry Road, which is an operational area. No associated range fan is shown on the 1952 map. Based on the review of historical documents and aerial photographs, it appears that hand grenade training occurred on both sides of Washington Light Infantry Road. However, research performed for this HRR focused only on the other than operational area, which is east of Washington Light Infantry Road.

The 1955 Training Facilities Map shows the location of the Hand Grenade Court No. 2 with an associated range fan on the east side of Washington Light Infantry Road (Figure 4-17). The 1956 Training Facilities Map only shows the reference number associated with the Hand Grenade Court No. 2, but does not show the range location.

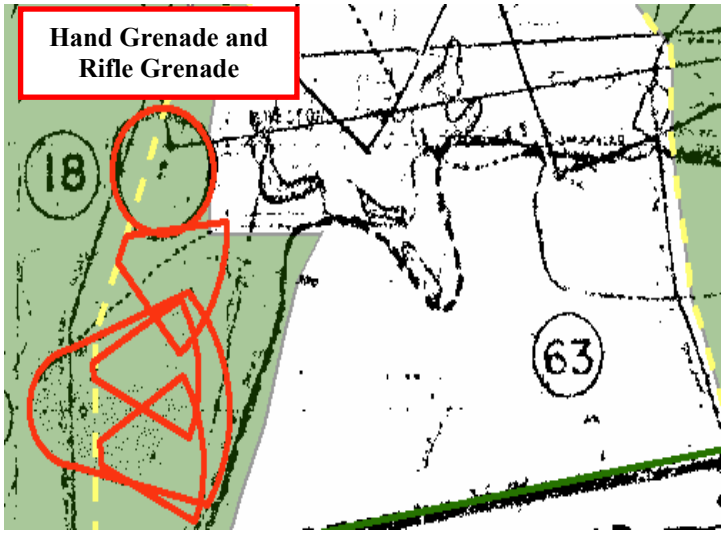

Figure 4-17: 1955 Training Facilities Map

An aerial photograph dated October 3, 1947 shows the land disturbed along the east side of Washington Light Infantry Road where rifle grenade and hand grenade training activities are assumed to have occurred. Aerial photography from March 29, 1955 shows a closer view of the same disturbed areas. A 1959 aerial photograph shows a firing line and a disturbed area that appears to be a hand grenade pit (impact area). The portion of this aerial photograph showing the Hand Grenade Court No. 2 is included as Figure 4-18. The aerial photograph confirms the use of the areas east and west of Washington Light Infantry Road for training purposes. Based on the maps and aerial photographs reviewed, it is assumed that both rifle grenades and hand grenades were used at this site.

Figure 4-18: Hand Grenade Court No. 2 shown on 1959 Aerial Photograph

4.2.3.3 Rifle Grenade Range NR 2

The 109-acre Rifle Grenade Range NR 2 is located in the southwestern portion of the Weston Lake Area. According to the CTT Range Inventory, this range was located south of the Hand Grenade Court No. 2 and was shown on several maps from the 1940s through the 1960s as a rifle grenade range. The Hand Grenade Court No. 2 is located in the northern portion of the Weston Lake Area, south of the Mortar Range. The CTT Range Inventory estimated that the period of use for the Rifle Grenade Range NR 2 was from 1944 to 1950. The acreage associated with the Rifle Grenade Range NR 2 in the CTT Range Inventory was 90 acres. Based on additional information obtained during the HRR, the acreage was increased to 109 acres to include the additional areas identified that were used in conjunction with the range. During review of the draft HRR, additional mapping sources were identified that more accurately identified the operational range boundary. Based on this revised boundary, the Rifle Grenade Range NR 2 is located within the operational range area and is not eligible

for evaluation as part of the Fort Jackson SI. The following information obtained during the HRR is included for informational purposes only.

The 1949 Fort Jackson and Vicinity Map shows three range fans identified as Hand Grenade & Rifle Grenade No. 2 (Figure 4-19). The ranges are oriented in an easterly/southeasterly direction and are located on the east side of Washington Light Infantry Road. These ranges are not shown on the 1946 Annex No. 1 Firing Ranges Map.

Figure 4-19: 1949 Fort Jackson and Vicinity Map

The Rifle Grenade Range NR 2 is shown on the 1952 Fort Jackson Location Map in approximately the same location as the 1949 map. However, the 1952 map depicts the range fan originating on the west side of Washington Light Infantry Road and extending across the road to the east. The 1955 and 1956 Training Facilities Maps also show the location of the Rifle Grenade Range NR 2 with the range fan originating on the west side of Washington Light Infantry Road. Based on review of historical maps, it appears that the administrative area of the range may have been located on the west side of Washington Light Infantry Road. This would indicate that the firing points were located on the east side of the road. The 1952, 1955, and 1956 maps show the majority of the range fan extending east of Washington Light Infantry Road. These maps do not show other ranges or range fans overlapping the Rifle Grenade Range NR 2.

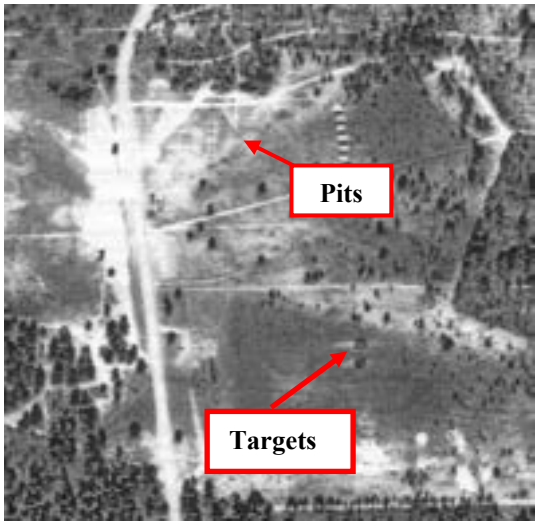

Figure 4-20: Rifle Grenade Range NR 2 shown on 1959 Aerial Photograph

Based on review of aerial photographs, two distinct training areas on the east side of the road are evident, just before the Washington Light Infantry Road turns to the northeast. Range use is visible on the east side of the road in the 1959 aerial photograph (Figure 4-20). Hand grenade pits and rifle grenade targets are visible in the photograph. Based on the information obtained for the HRR, it is assumed that both rifle and hand grenades were used at this site. The Rifle Grenade Range NR 2 is also identified on a 1993 Forestry Field Map as a "Known Dud Area".

4.2.3.4 Submachine Gun Area

The 17-acre Submachine Gun Area is located in the northern part of the Weston Lake Area. According to the CTT Range Inventory, this area is made up of three separate ranges, including the Dismounted Submachine Gun No. 1, the Moving Vehicle Submachine Gun, and the Dismounted Submachine Gun No. 2 ranges. These range fans overlap, with the direction of fire to the north/northwest into the East Impact Area. As discussed in the Mortar Range section above, the CTT Range Inventory depicted the Mortar Range and the Submachine Gun Area as a contiguous area divided in half, with the west side designated the Mortar Range (112 acres) and the east side designated the Submachine Gun Area (101 acres). However, based on the 1955 and 1956 Training Facilities Maps, the Mortar Range actually covers both the Mortar Range and the Submachine Gun Area reported in the CTT Range Inventory.

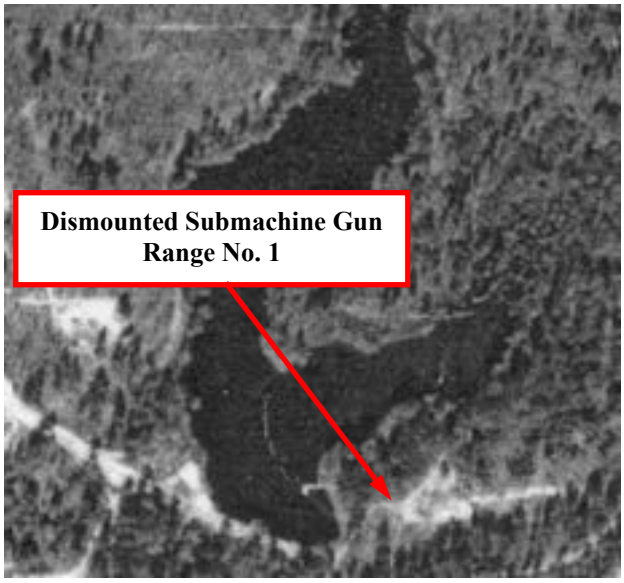

Figure 4-21: 1966 Aerial Photograph of Dismounted Submachine Gun Area

For the HRR, the Submachine Gun Area site boundary and acreage were reduced to include only the area not overlapped by the Mortar Range. As such, the acreage for the Submachine Gun Area was reduced from 101 acres to 17 acres. This area is shown on the 1966 aerial photograph included as Figure 4-21. For the HRR, aerial photography from 1949 to 1970 was also reviewed. The aerial photographs show that the Dismounted Submachine Gun Range firing points and target areas were located on a finger of land adjacent to Weston Pond. During the 1970s, the Weston Ponds were expanded to form Weston Lake. The firing points and target areas for this site are currently located on the shoreline of Weston Lake.

The 1946 Annex No. 1 Firing Ranges Map shows the Dismounted Submachine Gun No. 1 range with what appears to be firing points at three locations (two points at each of the three locations). The Dismounted Submachine Gun No. 2 range is located east of the Dismounted Submachine Gun No. 1 range and also has the same range layout. The Moving Vehicle Submachine Gun range is located between the Dismounted Submachine Gun No. 1 and No. 2 ranges. The Dismounted Submachine Gun No. 2 and the Moving Vehicle Submachine Gun range firing points are located in the operational area. However, the range fans extend into the other than operational area. According to the map, the direction of fire for all three ranges was north/northwest with the range fans covering an area from west of Washington Light Infantry Road to east of Timmonsville Guard Road.

The 1949 Fort Jackson and Vicinity Map shows the same general locations of the Dismounted Submachine Gun Nos. 1 and 2 and Moving Vehicle Submachine Gun ranges as the 1946 map; however, the range fans on the 1949 map are positioned slightly farther southwest. Additionally, the 1949 map shows the farthest extent of the Close Combat Range No. 1 fan overlapping the Submachine Gun Area.

The 1950 Fort Jackson Range Regulations include information regarding the Dismounted Submachine Gun No. 1 range. The 1949 map shows the range location, safety fan, and danger area, as described in these range regulations. Figure 4-22 shows a schematic for the range that was included in the range regulations. The range regulations state that there were three firing points located on this range. The regulations also note the type of weapons fired at the range included the M3A1 .45 caliber submachine gun and the Thompson M1928A1 .45 caliber submachine gun.

The 1957 Basic Information Map shows the Machine Gun Field Firing Range No. 1 and Machine Gun Field Firing Range No. 2 overlapping the Submachine Gun Area. Both of these ranges originate southeast of the Submachine Gun Area. The 1957 map does not show the Dismounted Submachine Gun Nos. 1 and 2 or the Moving Vehicle Submachine Gun ranges. This indicates that the ranges were no longer being used in 1957.

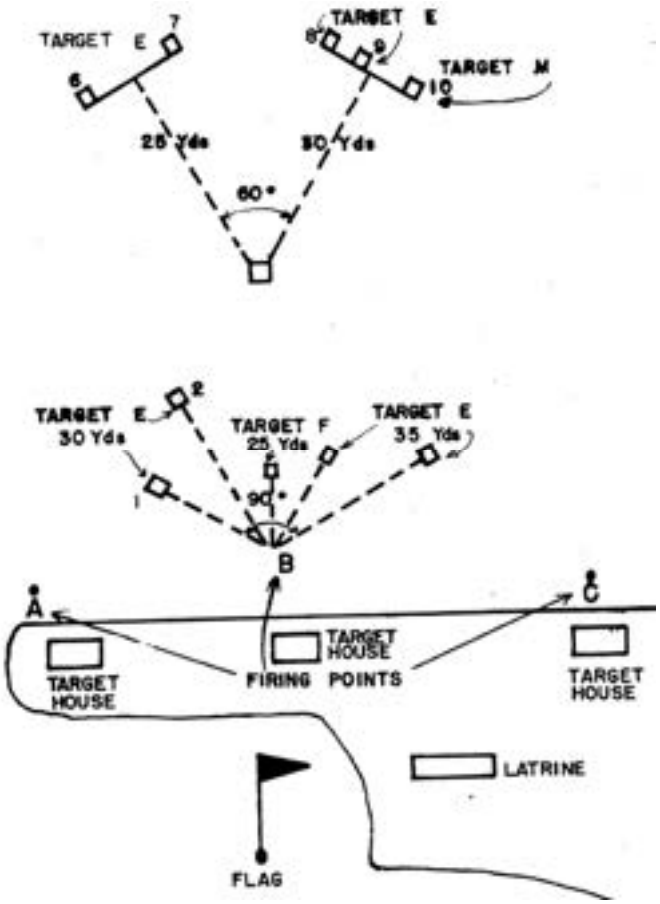

Figure 4-22: Dismounted Submachine Gun Range No. 1 Schematic Diagram

Table 4-8 summarizes the historical use and overlapping range information obtained for the Weston Lake Area ranges.

Table 4-8: Weston Lake Area Ranges Historical Use Summary

MMRP Ranges/Sites	1946 Map	1949 Map	1952 Map	1955 Map	1956 Map	1957 Map	Historical Use	Overlapping Ranges
Weston Lake Area								
Mortar Range			X	X	X		Mortar training	Submachine Gun Area, Hand Grenade Court No. 2, Howitzer Safety Fans
Hand Grenade Court No. 2		X	X	X	X		Hand/rifle grenade training	Mortar Range, Howitzer Safety Fans
Rifle Grenade Range NR 2		X	X	X	X		Hand/rifle grenade training	Howitzer Safety Fans
Submachine Gun Area	X	X					Small arms	Mortar Range, Howitzer Safety Fans

Table 4-9 provides a summary of the time-line analysis and map observations made for the Weston Lake Area ranges that are discussed in the previous sections.

Table 4-9: Weston Lake Area Map Summaries

Time Frame	Map Titles	Map Observations
1918-1926	1918 Location Map 1918 Key Map of Property 1919 General Map 1920 Special Military Map 1926 National Forest Map	No information on the Weston Lake Area MMRP sites was located on the 1918-1926 maps reviewed. In the Weston Lake Area, the installation boundary during 1918-1926 was approximately 5,000 feet north of the present boundary, so many of these locations would have been outside Camp Jackson and would not have had range use.

Time Frame	Map Titles	Map Observations
1946-1957	1946 Annex No. 1 Map 1949 Fort Jackson and Vicinity Map 1952 Location Map 1955 Training Facilities Map 1956 Training Facilities Map NR 2 1957 Basic Information Map	The ranges observed during this time frame include the following: Mortar Range No. 8, Mortar Range No. 7, Mortar Range No. 5A, Close Combat Range No. 1, Dismounted Submachine Gun No. 1, Dismounted Submachine Gun No. 2, Moving Vehicle Machine Gun, Rifle Grenade Range NR 2, Machine Gun Field Firing Range No. 1, and Machine Gun Field Firing Range No. 2.
1969	1969 Master Plan Map	The 1969 map does not show any of the areas identified as MMRP sites. However, the following 11 overlapping fans were identified: 105-mm Howitzer Position No. 5, 155-mm Howitzer Position No. 2, 155-mm Howitzer Position No. 6, 155-mm Howitzer Position No. 8, and 8-inch Howitzer Position No. 9, Machine Gun Field Fire No. 1 (Cassino Range), Rifle Squad in Technique of Rifle Fire Range RSTT No. 1, and five unlabeled range fans.

4.3 POTENTIAL MEC AND MC

Table 4-10 on the following page presents the potential MEC and the associated MC that are expected to be found at the Cantonment Area, FJFC, and Weston Lake Area ranges. The table includes information for each Munitions Response Site (MRS) and the associated sub areas. This information is based on the findings of the research conducted for the HRR.

Table 4-10: Summary of Potential MEC and MC

MRS	Sub Area	Potential Munitions	Primary Release Mechanism	Potential MEC	Potential MC
***Camp Jackson Ranges* (includes 1000-Yard Range, 600-Yard Range, 300-Yard Range, Machine Gun Range, and Pistol Range)**	Firing Points/Lines Target Areas Overlapping Range Fans: Small Arms Ranges East of Chesnut Road (Transition No. 1, M-1 Transition only), and Live Hand Grenade Court 2 (overlaps the 300-Yard Range only)NR1, and Pistol Range NR2	.30-/.45-/.50-caliber	Munitions firing, potentially from the following guns: Springfield Model 1903, M1909 Revolver (.45 Colt caliber), M1917 Revolver, Enfield M1917 Rifle, Browning .30 caliber M1917 Machine Gun, Mk 2 .50 Machine Gun	None (small arms use only)	Black powder (potassium nitrate, sulfur, and charcoal) Smokeless powder (nitrocellulose, dinitrocellulose [DNT], dibutylphalate, and diphenylamine) Double based propellant (nitrocellulose and nitroglycerin) Lead (Pb), Antimony (Sb), Arsenic (As), Copper (Cu), Tin (Sn), Zinc (Zn), Iron (Fe), Strontium (Sr), Magnesium (Mg), and lead styphnate/lead azide

MRS	Sub Area	Potential Munitions	Primary Release Mechanism	Potential MEC	Potential MC
Live Hand Grenade Court 2	Impact Area Overlapping Range Fans: Camp Jackson Ranges (300-Yard Range only) and Small Arms Ranges East of Chesnut Road	Hand grenades: MK2 Fragmentation (Frag), MK II Practice, M26/61 Frag, M30/62 Practice, M48E1 Smoke, M69 Practice, M18 Smoke, M26A2 Frag, M57 Frag, M34 Smoke, M59/68 Frag	Munitions firing (throwing)	Non-functioned grenades/fuzes	Black powder (potassium nitrate, sulfur, and charcoal) Smokeless powder (nitrocellulose, DNT, dibutylphalate, and diphenylamine) Double based propellant (nitrocellulose and nitroglycerin) Composition B TNT Octol RDX White Phosphorous (WP)

MRS	Sub Area	Potential Munitions	Primary Release Mechanism	Potential MEC	Potential MC
Small Arms Ranges East of Chesnut Road **(Includes Transition Range, Pistol Range NR 2, Landscape Target Range, and 1000-Inch Range Nos. 14, 15, 16)**	Firing Points/Lines Target Areas Overlapping Range Fans: Camp Jackson Ranges and Live Hand Grenade Court 2	.30-caliber .45-/.22-caliber	Munitions firing, potentially from the following guns: Springfield Model 1903, M1909 Revolver (Colt .45 caliber), M1917 Revolver, Enfield M1917 Rifle, M-1 Garand Rifle, M-1 Carbine, M1911 and M19111A1 .45-caliber pistol	None (small arms use only)	Black powder (potassium nitrate, sulfur, and charcoal) Smokeless powder (nitrocellulose, DNT, dibutylphalate, and diphenylamine) Double based propellant (nitrocellulose and nitroglycerin) Pb, Sb, As, Cu, Sn, Zn, Fe, Sr, Mg, and lead styphnate/lead azide

MRS	Sub Area	Potential Munitions	Primary Release Mechanism	Potential MEC	Potential MC

5 CONCEPTUAL SITE MODEL

5.1 CANTONMENT AREA RANGES/SITES

5.1.1 MMRP Site Profile

5.1.1.1 Area and Layout

The cantonment area is located on the western portion of the installation. A total of 10 ranges located within the cantonment area are evaluated in this HRR. Four of these ranges were identified in the CTT Range Inventory (1000- and 600-Yard Ranges, Machine Gun Range, and the Live Hand Grenade Court 2). Six additional ranges were identified during the preparation of this HRR. Based on geographical location and period of use, the cantonment area ranges have been grouped into the following three MMRP sites: Camp Jackson Ranges, Small Arms Ranges East of Chesnut Road, and the Live Hand Grenade Court 2.

The Camp Jackson Ranges comprise 81 acres and consist of the 1000-Yard Range, 600-Yard Range, 300-Yard Range, Machine Gun Range, and Pistol Range. The Small Arms Ranges East of Chesnut Road occupy 546 acres and consist of the Transition Range; 1000-Inch Range Nos. 14, 15, 16; Pistol Range NR 2; and the Landscape Target Range. The Live Hand Grenade Court No. 2 covers 3 acres.

Geographical features of the Camp Jackson Ranges are as follows:

- The 1000-Yard Range is located just northeast of the center of the cantonment area in between Hartsville Guards Road and Semmes Road. The 1000-Yard Range is long, narrow, and rectangular-shaped and runs in an east-west direction.

- The 600-Yard Range is located immediately south of the 1000-Yard Range. The 600-Yard Range is also rectangular in shape, but is not as narrow as the 1000-Yard Range. The long axis of the range is also oriented in an east-west direction.

- The 300-Yard Range is located on the eastern portion of the cantonment area, south of the 1000- and 600-Yard Ranges and east of the Machine Gun Range. The 300-Yard Range is generally trapezoidal in shape and is oriented in a general north-south direction.

- The Machine Gun Range is located south of the 1000- and 600-Yard Ranges and east of Chesnut Road. The Machine Gun Range has a narrow rectangular shape and is oriented with its long axis in a north-south direction.

- The Pistol Range is located east of Chesnut Road. The range is rectangular in shape and is generally orientated in a southwest-northeast direction.

The Camp Jackson Ranges cover 81 acres in the cantonment area. All of the Camp Jackson Ranges were used for small arms training. They are not all contiguous. The 1000- and 600-Yard Ranges are contiguous, and the Pistol Range and Machine Gun Range overlap.

Geographical features of the Small Arms Ranges East of Chesnut Road are as follows:

- The Transition Range is located east of Chesnut Road between Hartsville Guards Road and Semmes Road. This range is generally rectangular in shape and overlaps the majority of the 1000-Inch Range Nos. 14, 15, 16. The Transition Range is oriented in an east-west direction.

- The 1000-Inch Range Nos. 14, 15, 16 is located southeast of Golden Arrow Road and along the northeast side of Hartsville Guards Road. The range is generally rectangular in shape, with its range fan directed to the southeast.

- The Pistol Range NR 2 is located southwest of the Machine Gun Range. The range is generally rectangular in shape, with its range fan directed to the east.

- The Landscape Target Range is located near the southeastern portion of the cantonment area. The firing direction for this range is northwesterly, and the

Transition Range overlaps the portions of the Landscape Target Range's fan that fall within the other than operational area.

The Small Arms Ranges East of Chesnut Road cover approximately 546 acres in the cantonment area.

The Live Hand Grenade Court 2 consists of approximately three acres and is located south of the Machine Gun Range. Based on historical maps, the throwing lines and trenches were oriented north and south with grenades most likely thrown east and west. The Live Hand Grenade Court 2 represents the approximate size and location of the former hand grenade court throwing lines and impact areas.

5.1.1.2 Structures

Base housing exists on the western-most portion of the 1000-Yard Range. The remaining area of the former 1000-Yard Range, the 600-Yard Range, the 300-Yard Range, and the Live Hand Grenade Court 2 and their immediate surrounding areas are undeveloped. The former Machine Gun and Pistol Ranges are located just west of a school; however, the area of the Machine Gun Range is undeveloped. The southwestern portion of the Pistol Range appears to overlap portions of the schoolyard. The majority of the Transition Range and the 1000-Inch Range Nos. 14, 15, 16 are undeveloped; however, it appears that a recreational area, which consists of a baseball field, football field, and a youth sports center, is located near the western portion of the former Transition Range. A school is located north of the recreational area and could also be located on portions of the former Transition Range.

5.1.1.3 Utilities

A school, base housing, and Chesnut Road are located in close proximity to the western boundaries of the following former ranges: 1000- and 600-Yard Ranges, Pistol Range, Machine Gun Range, Transition Range, and Pistol Range NR 2. The 1000-Yard Range has power lines on portions of it. The school area (which contains overhead electrical lines) and associated recreational area may also be located on portions of the former Transition Range.

Additionally, the Live Hand Grenade Court 2 area is located off of Chesnut Road, which is close to the Pierce Terrace base housing complex. There is potential that underground utilities could exist on range areas that are located in close proximity to cantonment facilities. It has not been determined whether there are utilities located in the area of the 1000-Inch Range Nos. 14, 15, 16.

5.1.1.4 Boundaries

Table 5-1 displays the boundaries of the MMRP sites in the cantonment area.

Table 5-1: Cantonment MMRP Site Boundaries

MMRP Site	Range	Western Boundary	Eastern Boundary	Northern Boundary	Southern Boundary
Camp Jackson Ranges	1000-Yard Range	Undeveloped land	Undeveloped land	Undeveloped land	School, recreational facility, 600-Yard Range
	600-Yard Range	Undeveloped land	Undeveloped land	School, recreational facility, 1000-Yard Range	Undeveloped land

	Transition Range	School, recreational facility, Chesnut Road, and base housing	Undeveloped land	Undeveloped land	Undeveloped land
	Landscape Target Range	Undeveloped land	Undeveloped land	Undeveloped land	Just north of installation boundary

5.1.1.5 Security

The cantonment area MMRP sites are located within the boundaries of the Fort Jackson installation. The majority of the cantonment area has been enclosed by security fencing and access is controlled at guarded gates. Outside the fenced area, access is limited by gates and/or roadblocks on all roads leading into the installation. Access to the installation is restricted to Army personnel, authorized civilian personnel, contractors, and visitors. Security personnel routinely patrol the cantonment area by vehicle. The individual ranges within the cantonment area ranges are not fenced.

5.1.2 Physical Profile

5.1.2.1 Climate

Fort Jackson is in a humid continental area. Predominant climatic factors are the installation's location in the lower latitudes and its proximity to the Appalachian Mountains to the west, which block the approach of unseasonable cold weather in winter. This southern temperate region can experience temperatures ranging from below freezing to greater than 100 degrees Fahrenheit (ºF); however, there is a relatively narrow annual temperature range, from a mean daily temperature of 81ºF in July to 44ºF in January.

The Bermuda high, a semi-permanent high pressure cell centered in the Atlantic Ocean, dominates summer weather. The influx of warm moist air from the south causes days to be hot and humid. The average high temperature in July, the hottest month of the year, is 91ºF. Temperatures greater than 90ºF are experienced an average of 66 days per year. Winters are generally mild, and January, the coldest month, has an average daily minimum temperature of about 32ºF. Temperatures below freezing are experienced an average of 61 days a year. The frost-free growing season is about 190 days, with the first frost occurring in late October and the last frost usually occurring in mid-April.

The average annual precipitation is 46 inches, with summer rains constituting 39% of annual rainfall. Average monthly rainfall for July and August is five to six inches. Minimum

amounts of rainfall occur during October and November, when monthly averages are about three inches. About every five years an ice storm occurs, severe enough to cause some timber damage. Every few years a tropical storm will cause heavy rains for two or three days. In extremely rare instances, storm winds will come inland far enough to cause damage, such as occurred during Hurricane Hugo in 1989.

5.1.2.2 Geology

Fort Jackson is on the northwestern edge of the Atlantic Coastal Plain Province, a region of low to moderate relief and gently rolling plains, known as the Sand Hills. The Fall Line, a zone that marks the boundary between younger, softer sediments of the Province and ancient, crystalline rocks of the Piedmont Province, lies about four miles west of the cantonment area.

The principal geologic formation in the Sand Hills is the Tuscaloosa Formation, which consists of marine deposits of light-colored sands and kaolin clays. Most soils at Fort Jackson are formed from sediment of the Tuscaloosa Formation. A layer of Quaternary sand terrace overlies the Tuscaloosa Formation, which`, and arkosic sands. It lies unconformably on the peneplained surface of crystalline rocks.

5.1.2.3 Topography

Gently to moderately rolling, moderately dissected high plains occupy most of Fort Jackson. Flat to gently rolling low plains characterize the extreme western portion of the installation, including a major portion of the cantonment area and the alluvial plains occupied by southwesterly flowing Gills and Mill creeks. Local relief around the valley of Gills Creek and its tributaries is generally less than 60 feet. Slopes are predominately between zero and three percent on the alluvial plains, and slopes in the cantonment area are predominately between three and eight percent.

5.1.2.4 Soil

Soils at Fort Jackson range from nearly level to strongly sloping, characteristic of the Sand Hills. Principal soil map units occurring on Fort Jackson are the Lakeland, Vaucluse-Ailey-Pelion, and Pelion-Johnston-Valcluse. The installation also has Blanton soil series and

various soil-urban land complexes. These soils are typically well drained on high plains and side slopes and poorly drained in valleys. Surface soil layers in the Sand Hills are usually sandy with predominantly loamy subsoil.

Within the cantonment area, facilities are developed on moderately well drained, fine sands, silts, and clays, which are part of various soil-urban land complexes. Pelion urban land complex is the major soil series within the cantonment. Pelion soils occur on side slopes of ridges, with typical slopes of two to 15%. Pelion soils are loamy sands, very strongly acidic with moderately slow permeability.

5.1.2.5 Hydrogeology

Groundwater is generally plentiful at Fort Jackson. The Tuscaloosa Formation, of Upper Cretaceous age, underlies Fort Jackson and is the primary source of groundwater in the area. Small quantities of groundwater may be available in alluvial deposits along major streams.

The Tuscaloosa Formation is at the surface over most of Fort Jackson. This formation lies unconformably on a peneplained surface of older, crystalline rocks. The formation consists of interbedded, generally unconsolidated, fine to coarse sand and clay, causing groundwater to occur under both unconfined and confined (i.e., artesian) conditions. Groundwater occurs under water table conditions in the upper part of the zone of saturation. At a depth of about 99-251 feet, permeable sand zones are frequently overlain by less permeable clay zones, and the groundwater exists under artesian conditions.

Groundwater in the Fort Jackson area is suitable for human consumption; water quality is considered excellent. Total dissolved solids are generally less than 50 milligrams per liter. Water standards are occasionally exceeded by slight concentrations of iron and manganese. Fort Jackson is not located within a recharge area for the sole-source aquifer. A figure from a 1997 environmental sampling report shows an active water supply well located southwest of Heise Pond and south of Semmes Road. This well is located south of the Live Hand Grenade Court No. 2 and the Transition Range. This figure also shows three active water

supply wells located just east of Weston Lake and a water supply well located in the vicinity of the FJFC.

5.1.2.6 Hydrology

Five separate watersheds receive surface water runoff from the Fort Jackson installation. These watersheds are drained by Wildcat, Gills, Colonels, Mill, and Cedar Creeks. Wildcat Creek drains most of the cantonment area of Fort Jackson and flows west, where it enters the Gills Creek drainage area just below Lake Katherine. The Gills Creek drainage area is the second largest drainage area of the installation and is in the extreme northwest corner of Fort Jackson. This creek flows south along the installation's western boundary and enters the southeast-flowing Congaree River south of Columbia. Colonels Creek is the installation's largest drainage basin and drains the entire eastern one third of Fort Jackson. Colonels Creek flows southeast and off-post, eventually discharging into the Wateree River, a tributary of the Congaree River. Mill Creek drains the southwestern portion of the installation, flows off-post, and eventually discharges into the Congaree River. Cedar Creek drains an area along the installation's southern boundary. Drainage from this area flows southward, off-post, and also eventually discharges into the Congaree River

5.1.2.7 Vegetation

The area of Fort Jackson encompasses a wide variety of vegetative site conditions ranging from bottomland hardwood communities to xeric longleaf pine communities. In general, Fort Jackson can be classified into five primary terrestrial vegetative types: pine, pine/upland hardwood, upland hardwood, bottomland hardwood, and open field. There are no grassland areas on Fort Jackson, except for a small amount in the cantonment area and alongside roads.

Vegetation on Fort Jackson is diverse and abundant. Field investigations and surveys have identified over 750 species of flora on the installation. There are no farmlands within the installation boundary. Forest cover is the principal vegetative type and may be grouped into eight major forest types: Natural Pine, Pine Plantation, Pine-Scrub Oak, Pine-Hardwood, Scrub Oak, Upland Hardwood, Bottomland Hardwood, and Hardwood-Pine.

5.1.3 Land Use and Exposure Profile

5.1.3.1 Current Land Use / Activities

The former ranges within the cantonment area consist of undeveloped forested land. Fort Jackson manages the facilities forest resources with annual timber harvests. Timber located on some of the former ranges may be cut during the annual harvest. A school and its associated recreational facilities are located within the western portion of the Transition Range.

5.1.3.2 Current Human Receptors

With the exception of the western portion of the former Transition Range, which is occupied by a school and associated recreational area, the majority of the areas within the cantonment ranges are undeveloped woodland and largely inaccessible by vehicle. Human receptors are limited to authorized installation personnel, contractors, visitors, and trespassers. School children, teachers, and school officials would be the human receptors for the areas of the western portion of the Transition Range.

5.1.3.3 Potential Future Land Use

Currently there are no plans to develop the former cantonment area ranges. Potential land use will continue to be consistent with forest management (i.e., timber harvesting).

5.1.3.4 Potential Future Human Receptors

Potential future human receptors would be limited to current use receptors, to include authorized installation personnel, contractors, visitors, and trespassers.

5.1.3.5 Zoning/Land Use Restrictions

The majority of the MMRP site land areas have a land use class of Cantonment Open Space. Some ranges, located immediately east of Chesnut Road, overlap other land use classifications. The Transition Range, the Pistol Range, and the 600-Yard Range slightly overlap a Community Facility land use class, and the western portion of the Machine Gun

Range overlaps a Housing land use class. No zoning or land use restrictions have been identified for the land areas of the ranges located in the Cantonment Open Space land use class.

5.1.3.6 Beneficial Resources

As stated previously, the area of Fort Jackson encompasses a wide variety of vegetative site conditions ranging from bottomland hardwood communities to xeric longleaf pine communities. Natural Pine and planted pine are the most important forest types on the installation, which include all pine stands regardless of species. Timber is harvested annually at Fort Jackson. The annual harvest of timber products on Fort Jackson consists of sales ranging in size from 200 to 4,000 cords.

According to the Revised Final Phase II RFI Report for the Wonsan (SWMU 12) and Inchon (SWMU 17) Explosive Ordnance Disposal Sites, a variety of mammals and birds are likely to find suitable habitat on Fort Jackson, particularly in the adult, select cut, long-leaf pine forests adjacent to the active impact areas or within the adjacent scrub-brush habitat present on the active impact and ranges. It is noted that the SWMU 12 and SWMU 17 sites are located just east of the Weston Lake Area. This document also reported that a total of 78 federal and/or state listed threatened and endangered species have been identified within Richland County. However, only three species are present at Fort Jackson: the Rough-leaved Loosestrife, Smooth Coneflower, and the Red-cockaded Woodpecker. None of these species have been identified within the cantonment area.

Additionally, groundwater is generally plentiful at Fort Jackson. The Tuscaloosa Formation, of Upper Cretaceous age, underlies Fort Jackson and is the primary source of groundwater in the area. The Tuscaloosa Formation is at the surface over most of Fort Jackson. Groundwater in the Fort Jackson area is suitable for human consumption; water quality is considered excellent. However, according to a 2003 Phase II RFI report, groundwater is not used as a potable water source at Fort Jackson. Potable water is provided to Fort Jackson by the City of Columbia.

The following discussion pertains to Fort Jackson's cultural resources. According to the INRMP, Fort Jackson has completed a number of cultural resource surveys inventorying and documenting archaeological and historical resources. About 81% of Fort Jackson has been surveyed for archaeological resources. Known NRHP eligible or potentially eligible archaeological sites have occurred in fairly discrete clusters. Remaining portions of Fort Jackson that have not been examined are located in the main cantonment area and impact areas in outlying portions of the installation. The un-surveyed portion of the main cantonment area is expected to contain archaeological resource sites, some of which may be eligible for the NRHP. However, a letter from the South Carolina State Historic Preservation Office indicated that disturbed portions of the main cantonment area do not require survey (Cantonment Area, Fort Jackson, Richland County, South Carolina, letter from the State Historic Preservation Office dated December 15, 1993).

A total of 662 archaeological sites had been identified within Fort Jackson. Most have been preliminarily determined to be ineligible for the NRHP. With exception of the 11 cemeteries recorded as archaeological sites, these resources require no further management consideration. Twelve sites are considered eligible for the NRHP. NRHP-eligible resources must be preserved in place or subjected to appropriate data recovery investigations to prevent the loss of the significant information that is present. The remaining 96 sites have been determined to be potentially eligible for the NRHP. These sites contain components of the different cultural periods identified at Fort Jackson. These resources must be preserved in place until their eligibility for listing has been determined.

Numerous surveys have reviewed the historic qualities of the 1,700 structures at Fort Jackson, most of which have been built in the last 35 years. A review of all existing and demolished structures and all previous historic structure surveys concluded that only three structures were recommended as eligible for listing in the NRHP. One of these structures was subsequently mitigated and demolished. Remaining properties exhibited little integrity and are not considered NRHP-eligible (Panamerican Consultants, Inc., 1997).

Cemeteries are associated with families, churches, or communities that were present on installation lands prior to their acquisition by the Army. Cemeteries on Fort Jackson are enclosed by fences and maintained by the Army. None of Fort Jackson's cemeteries are considered eligible for NRHP inclusion, but all are protected. For management purposes, all cemeteries are treated in the same manner as NRHP-eligible cultural resources.

Fort Jackson has no properties listed on the NRHP, no identified access routes to or sites of religious or ceremonial rites of American Indians, no properties listed as National Historic Landmarks, and no properties listed on the World Heritage List. There may be properties potentially eligible for listing on the NRHP. There are 12 archaeological sites eligible for listing on the NRHP and 96 that are potentially eligible. Two structures remain eligible for the NRHP.

5.1.3.7 Demographics

Based on figures from the 2000 U.S. Census, the population of Richland County (in 2000) was 320,677. The population of the City of Columbia, Richland's largest city, was 116,278. With respect to Fort Jackson, soldiers, civilians, retirees, and family members make up the Fort Jackson community, which continues to grow. The installation instructs an average of 35,000 soldiers in basic and advanced training each year. An additional 19,000 attend courses at the Soldier Support Institute, Chaplain Center & School, and Drill Sergeant School. Fort Jackson employs 3,900 civilians and provides services for more than 100,000 retirees and their family members.

5.1.4 Ecological Profile

5.1.4.1 Habitat Type

According to the INRMP, forest cover is the principal vegetative type on Fort Jackson. The forest types are described in Section 5.1.2.7. Forest management has the most impact on wildlife management on Fort Jackson. Silvicultural treatments modify the landscape and associated wildlife habitats. To ensure silvicultural practices are performed in a manner that positively affects wildlife, all prescriptions are forwarded through the Wildlife Office for

review and comment. Most prescriptions result in beneficial impacts to many wildlife species, but some species may be negatively impacted by the operations in the short term. The only featured species designated for forested habitats is the Red-cockaded Woodpecker.

5.1.4.2 Degree of Disturbance

Disturbance of flora and fauna within the former ranges of the cantonment area is expected to be low to moderate during annual timber harvests.

5.1.4.3 Ecological Receptors

According to the June 2000 ICRMP, compiled by Mr. Jack Wynn (Heritage Program Manager for the Chattahoochee-Oconee National Forests) and Mr. Michael Harmon (Assistant Forest Archaeologist for the National Forests in North Carolina), only one federally listed endangered animal species exists on Fort Jackson: the Red-cockaded Woodpecker (*Piciodes borealis*). The bird nests in aging (greater than 70 year old) pines, lives in family groups or clans, and inhabits park-like territories or clusters of 1,500 radii. There are about 13 active clusters and 39 inactive ones on the installation. This population is routinely monitored, and the surrounding forest managed to encourage the survival of the groups. None of the bird nests or clusters are within the cantonment area ranges discussed in this section.

There are four candidate species for listing as threatened or endangered. They are Southeastern myotis (*Myotiss austroriparius*), Rafinesques's big-eared bat (*Plecotus rrafinequii*), Loggerhead shrike (*Lanius Ludovicianus*), and Bachman's sparrow (*Aimphila aestivalis*). They may be listed later if their populations drop. There are also two federally endangered plant species, rough-leaved loosestrife (*Lysimachia asperulaefolia*) and smooth coneflower (*Echnata laevigata*). Two candidate plants for listing are also found on the installation. They are the crested fringed orchid (*Pteroglossaspis ecristata*) and Piedmont milfoil (*Myriophyllulm laxum*). Endangered species monitoring plans have been prepared for listed species and are consulted prior to any activities that might cause disruptions.

According to the INRMP, the rough-leaved loosestrife is found on the eastern edge of the East (artillery) Impact Area. The smooth coneflower has been documented adjacent to Statue of Liberty Road in Training Area 29B. Neither of the endangered plant species is located within the cantonment area.

5.1.5 Munitions/Release Profile

5.1.5.1 Munitions Types and Release Mechanisms

Table 5-2 presents a summary of the types of munitions that were either identified during the limited visual survey or are expected to exist at the former cantonment area ranges based on information collected for this HRR. The mechanisms by which the munitions were released into the environment are also presented in this table. The typical release mechanisms for the former ranges are intentional activities, such as firing into a target area, and unintentional activities, such as rounds fired falling outside the target area or rounds discarded for various reasons at the firing point. It is noted that the majority of the ranges within the cantonment area were generally used for small arms training. Map 5-1, located at the end of Section 5, shows the horizontal extent of MEC for the cantonment area ranges. Only one range, the Live Hand Grenade Court 2, has the potential for MEC. As such, the primary concern for the cantonment ranges would be associated with MC.

Table 5-2: Summary of Potential Munition Types - Cantonment Area

MMRP Site	Potential Munitions	Primary Release Mechanism
Camp Jackson Ranges	.30-/.45-/.50-caliber	Munitions firing, potentially from the following weapons: Springfield Model 1903, M1909 Revolver, M1917 Revolver, Enfield M1917 Rifle, Browning .30 caliber M1917 Machine Gun, M2 .50-caliber Machine Gun
Live Hand Grenade Court 2	Hand grenades: MK 2 Frag, MK II Practice, M26/61 Frag, M30/62 Practice, M48E1 Smoke, M69 Practice, M18 Smoke, M26A2 Frag, M57 Frag, M34 Smoke, M59/58 Frag	Munitions firing (throwing) - hand grenades

MMRP Site	Potential Munitions	Primary Release Mechanism
Small Arms Ranges East of Chesnut Road	.22-/.30-/.45- caliber	Munitions firing, potentially from the following guns: Springfield Model 1903, M1909 Revolver, M1917 Revolver Enfield M1917 Rifle, M-1 Garand Rifle, M-1 Carbine, M1911 and M19111A1 Pistol

5.1.5.2 Maximum Probable Penetration Depth

The ranges located south of Hartsville Guards Road (the Camp Jackson Ranges, Live Hand Grenade Court 2, and Small Arms Ranges East of Chesnut Road) consist of nine small arms ranges and one hand grenade range. Small arms and hand grenades do not have an associated penetration depth. These and other MC components (such as spent shell casings and residual black or smokeless powder constituents) are expected to have been directly deposited on the soils surface.

5.1.5.3 MEC Density

MEC presence in the ranges located south of Hartsville Guards Road, with the exception of the Live Hand Grenade Court 2, is not anticipated because these ranges were used for small arms training. There is potential for MEC presence in the area of the Live Hand Grenade Court 2.

5.1.5.4 MEC Scrap/Fragments

No MEC scrap or fragments were identified at the Live Hand Grenade Court 2; however, a visual reconnaissance of the entire area was not performed for this HRR.

5.1.5.5 Associated Munitions Constituents

As noted in Table 4-10, the MC associated with the cantonment area ranges include the following: black powder (potassium nitrate, sulfur, and charcoal), smokeless powder (nitrocellulose, DNT, dibutylphalate, and diphenylamine), double based propellant (nitrocellulose and nitroglycerin), Pb, Sb, As, Cu, Zn, Fe, Mg, lead styphnate/lead azide, RDX, and WP.

5.1.5.6 Transport Mechanisms / Migration Routes

The primary transport mechanisms identified for the former cantonment area ranges include the following:

Erosion: The majority of the cantonment areas are heavily vegetated. Thunderstorms often cause local flooding during the summer months; therefore, erosion could be a factor in transporting and migrating MC contaminated soil.

Soil Disturbance: Any surface or subsurface soil disturbance can cause both the transport and migration of MEC and MC. Surface and subsurface disturbances can lead to transport and migration of MC from one environmental media to another (soil to surface or groundwater or both) through surface water runoff and erosion. Since there is potential for timber harvesting to occur in some of the cantonment areas, the potential for soil disturbance exists.

Infiltration: Based on the generally sandy soils located within the cantonment area, the potential for MC to migrate from one environmental media to another (surface to subsurface soil to groundwater) through infiltration exists.

5.1.6 Pathway Analysis

5.1.6.1 MEC

A MEC pathway analysis was prepared for the Live Hand Grenade Court No. 2 (Figure 5-1). The Live Hand Grenade Court No. 2 is located east of Chesnut Road within the southwestern portion of the Transition Range. Since there is no penetration depth associated with hand grenades, MEC in the subsurface is not anticipated. The primary exposure pathway for human and ecological receptors is handle/tread underfoot of surface MEC. The potential for complete pathways exists between surface MEC and all receptors for the Live Hand Grenade Court No. 2.

5.1.6.2 MC

Due to the numerous ranges located within the cantonment area, similar ranges were grouped together to minimize the number of MC pathway analyses models. A pathway analysis figure was created for the Live Hand Grenade Court 2, Camp Jackson Ranges, and the Small Arms Ranges East of Chestnut Road. In summary, the following MC pathway analyses were prepared:

- Live Hand Grenade Court 2 (Figure 5-2)
- Camp Jackson Ranges - 1000-Yard, 600-Yard, 300-Yard, Machine Gun, and Pistol Ranges (Figure 5-3)
- Small Arms Ranges East of Chesnut Road – Transition Range, 1000-Inch Range Nos. 14, 15, 16, Pistol NR 2, and Landscape Target Ranges (Figure 5-4)

The three MC pathway analyses for the cantonment area ranges each show a potentially complete pathway for biota for the vegetation exposure route. Biota is the only receptor expected to ingest vegetation at the sites. Crops are not grown, and domestic animals are not raised on these sites. Biota has potentially complete pathways for contact with MC impacted vegetation. All other pathways for vegetation in the food chain are expected to be incomplete.

The pathways between game/fish/prey and authorized installation personnel, contractors, and visitors are incomplete because hunting is not permitted in the cantonment area and there are no water bodies overlapped by any HRR-identified ranges. Biota has potentially complete pathways through the potential ingestion of prey that may have fed on contaminated vegetation in these areas.

Potentially complete pathways for ingestion and dermal contact exist between surface water/sediment and all receptors at these sites because there is potential for erosion to enable the migration of MC to the water bodies located at the southern portion of the cantonment area; Heises Pond and Twin Lakes.

The groundwater exposure routes are expected to be potentially complete pathways for all potential receptors since there is an active water supply well located south of Semmes Road in the southern portion of the cantonment area. However, the City of Columbia supplies Fort Jackson with potable water.

Potentially complete pathways for all exposure routes for both surface and subsurface soil exist for all receptors. Since access to and activities in these areas are not restricted, the potential for soil disturbance to occur exists. Also, the subsurface pathways would be potentially complete for biota because they may nest or burrow in these areas.

Figure 5-1: MEC Exposure Pathway Analysis - Live Hand Grenade Court 2

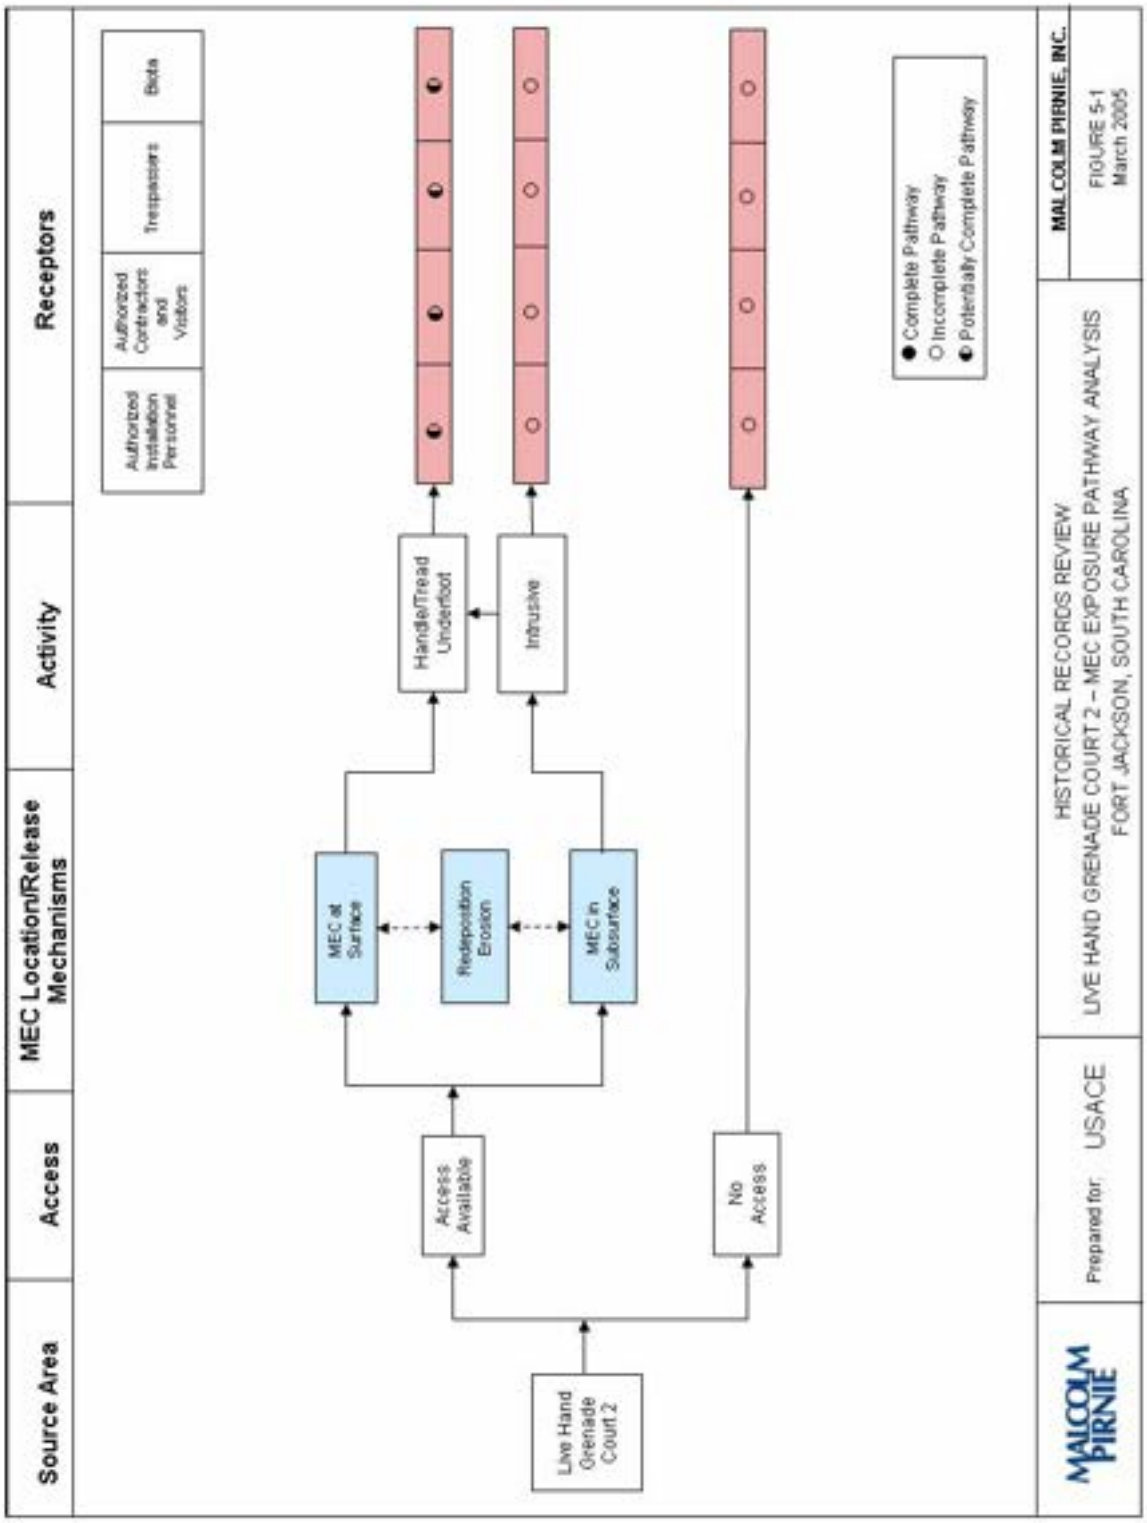

Figure 5-2: MC Exposure Pathway Analysis - Live Hand Grenade Court 2

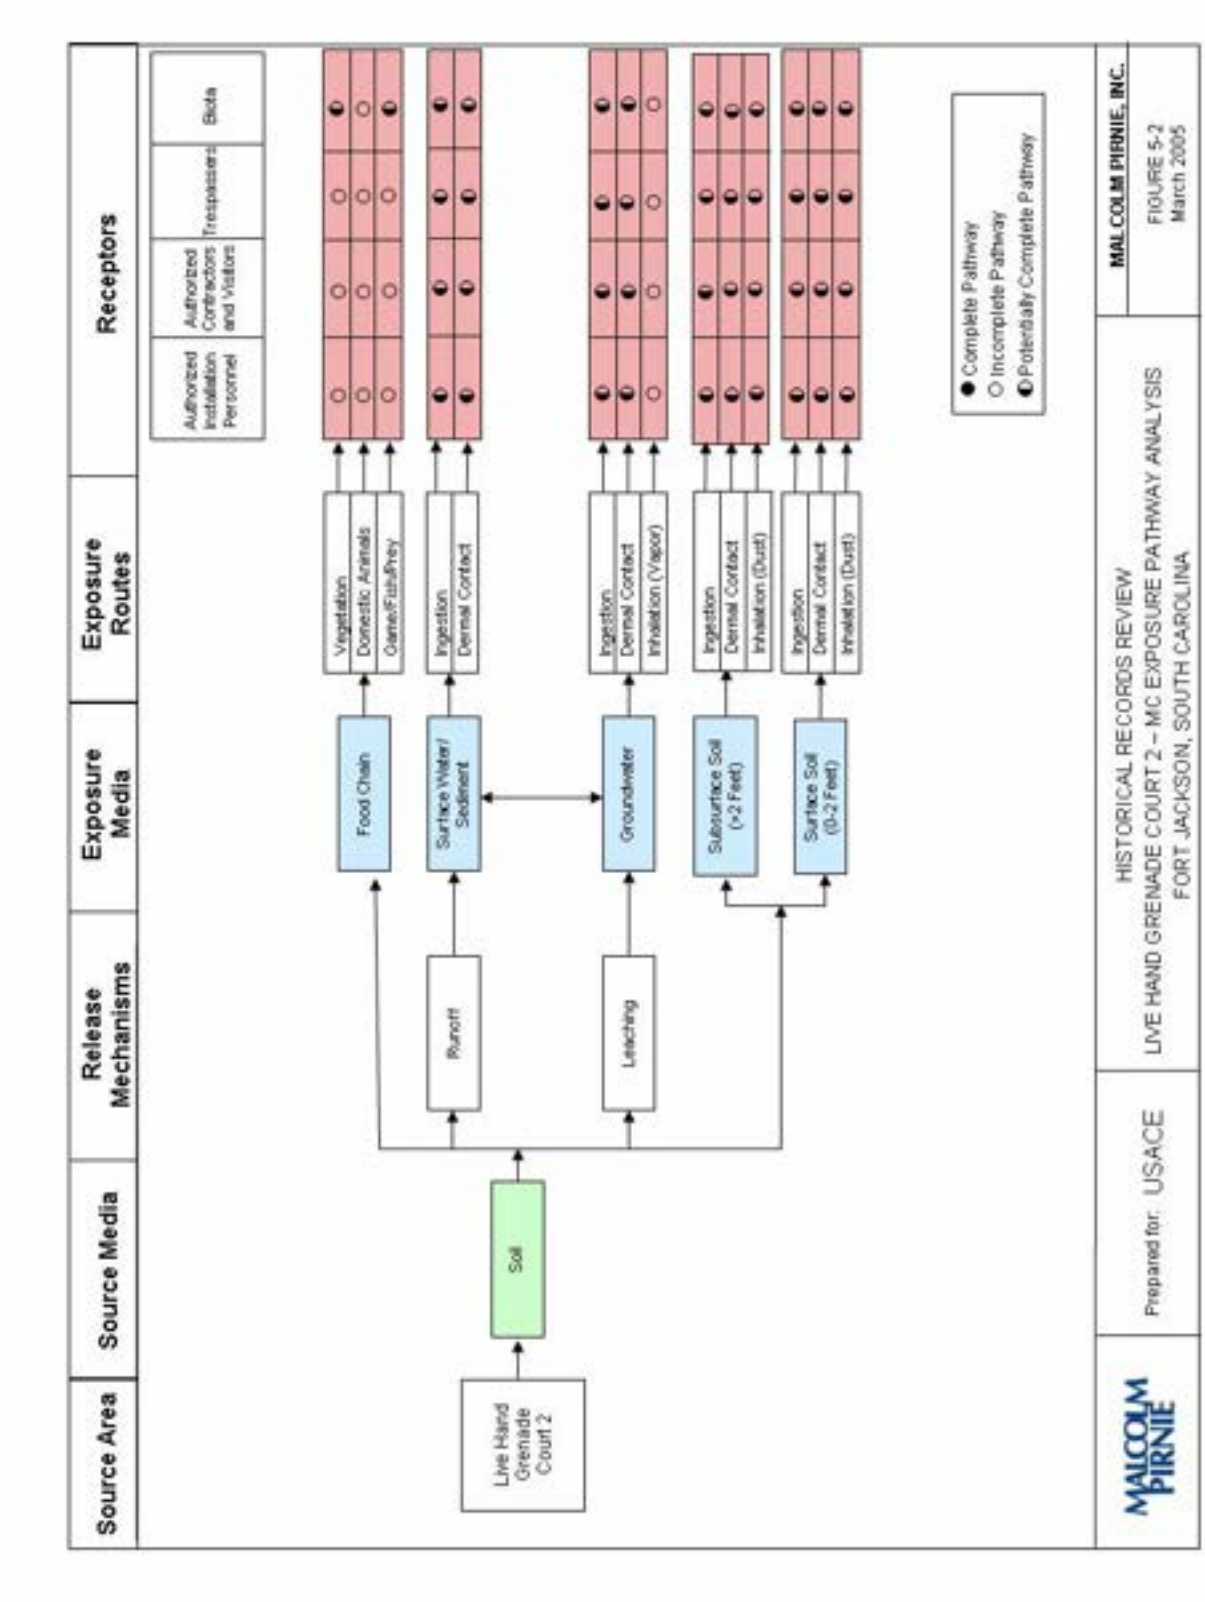

Figure 5-3: MC Exposure Pathway Analysis – Camp Jackson Ranges

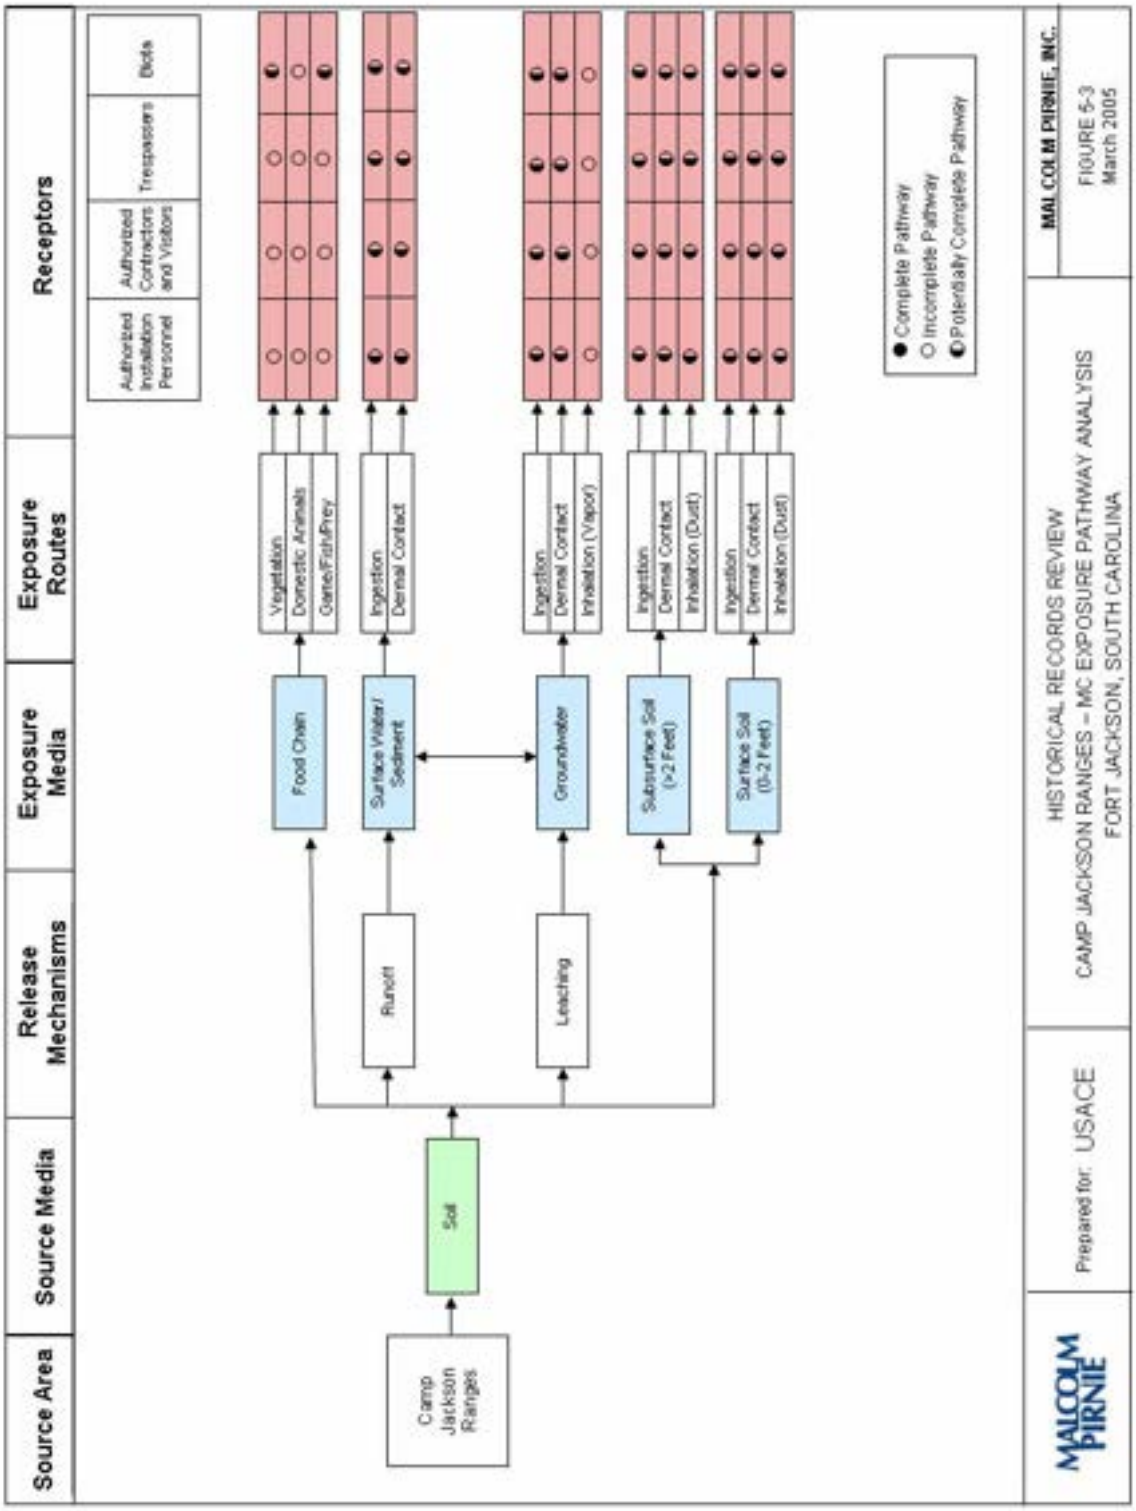

Figure 5-4: MC Exposure Pathway Analysis - Small Arms East of Chesnut Road

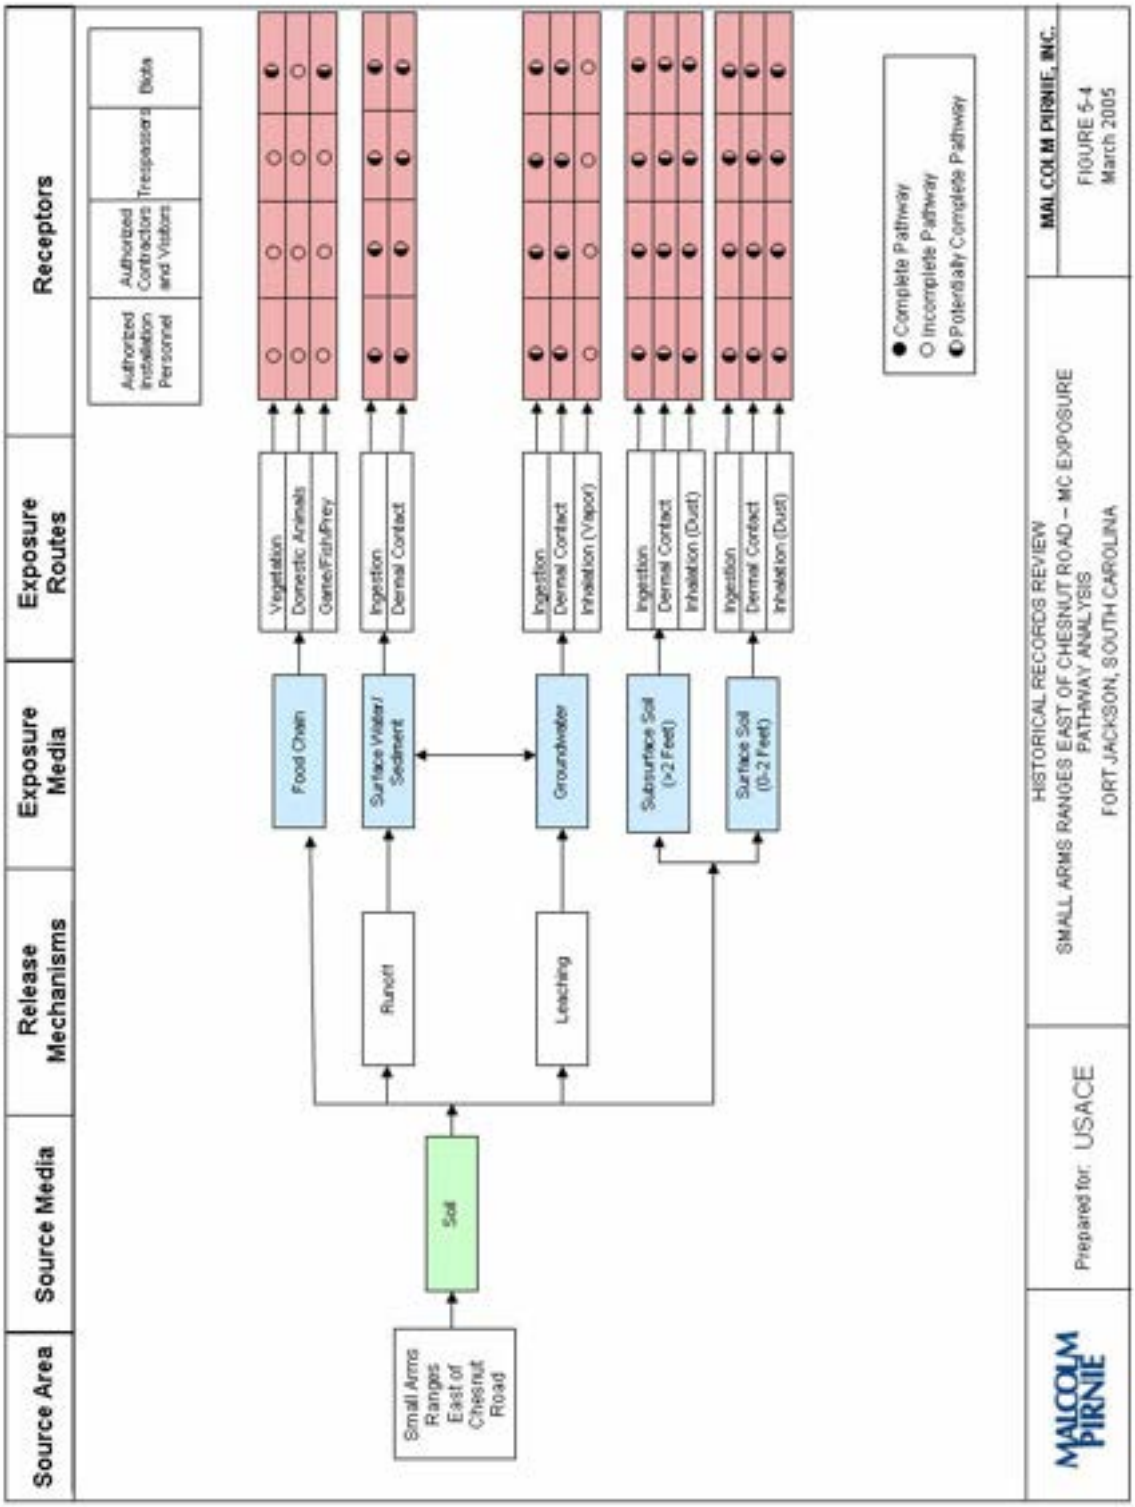

5.2 FORT JACKSON FLIGHT CLUB

5.2.1 MMRP Site Profile

5.2.1.1 Area and Layout

The FJFC is an approximately 54-acre area located east of Wildcat Road just north of Dixie Road, near the northwestern portion of the installation. The FJFC is quasi-rectangular in shape with a wider base than top. The westernmost portion of the FJFC did not have a historical range use. As such, the MMRP site acreage for the FJFC is 42 acres. This area has been divided into two MMRP sites: FJFC Salerno Ranges (which includes 15 acres that had MEC use) and FJFC Small Arms Ranges (which includes 27 acres).

5.2.1.2 Structures

The FJFC area contains a flat, clear, and level area surrounded by forest and grassland. The flat cleared portion of the site has been used by the Fort Jackson model airplane club as an airstrip for small recreational type R/C model aircraft. The improvements to the site include a level area for use as an airstrip, a gravel parking area, sun shelter and bleachers for spectators, a covered picnic area, and a storage building for maintenance equipment. No other structures are associated with this site.

5.2.1.3 Utilities

The only utilities associated with this area are electric lines running to street security lights.

5.2.1.4 Boundaries

The FJFC is bounded to the north and east by forest and grassland, to the south by Dixie Road, and to the west by Wildcat Road.

5.2.1.5 Security

The FJFC area is located within the boundaries of the Fort Jackson installation. Access to the installation is limited by gates and/or roadblocks on all roads leading into the installation.

Access to the installation is restricted to Army personnel, authorized civilian personnel, contractors and visitors. Security personnel routinely patrol the FJFC area by vehicle. The FJFC does not have separate fencing.

5.2.2 Physical Profile

5.2.2.1 Climate

Climate is general installation information and is presented in Section 5.1.2.1.

5.2.2.2 Geology

Geology is general installation information and is presented in Section 5.1.2.2. No specific geologic information for FJFC was available.

5.2.2.3 Topography

The FJFC is located at an elevation of approximately 400 feet above mean sea level. Topography within the FJFC is generally flat and slopes towards the east.

5.2.2.4 Soil

According to Figure 3.2.4 - Fort Jackson soils contained in the INRMP, the soil type located within the FJFC consists of Lakeland sand. Lakeland sand is a deep, excessively drained gentle sloping soil on convex ridge tops in the Sand Hills. The surface layer (three inches) consists of dark gray sand; the subsurface (107 inches) consists of yellow or brown sand. It has medium potential for urban development, primarily due to low water capacity. Lakeland sand is a predominant soil type found at Fort Jackson.

5.2.2.5 Hydrogeology

Hydrogeology is general installation information and is presented in Section 5.1.2.5.

5.2.2.6 Hydrology

Hydrology is general installation information and is presented in Section 5.1.2.6.

5.2.2.7 Vegetation

According to Figure 3.3.1.1 - Forest Types of Fort Jackson contained in the INRMP, the predominant forest types located within the FJFC are natural pine and scrub oak.

5.2.3 Land Use and Exposure Profile

5.2.3.1 Current Land Use

The flat cleared portion of the site has been used by the FJFC as an airstrip for R/C model aircraft since the late 1980s. There is a picnic area associated with the flying field.

5.2.3.2 Current Human Receptors

Current potential receptors of any MEC or MC present on the former FJFC include R/C aircraft operators (authorized visitors), authorized Fort Jackson personnel, authorized contractors, and trespassers.

5.2.3.3 Current Land Uses/Activities

Current activities include those associated with R/C aircraft recreational operations. Also, routine maintenance is performed on the airstrip, picnic, and spectator areas. Much of the FJFC area is undeveloped.

5.2.3.4 Potential Future Land Use

No changes to the current land use are planned for this area. Fort Jackson may increase the size of maintained area for the benefit of the FJFC.

5.2.3.5 Potential Future Human Receptors

The future human receptors are expected to remain the same as the current human receptors. There is no anticipated change in future site usage.

5.2.3.6 Zoning/Land Use Restrictions

No zoning or land use restrictions have been identified for this site.

5.2.3.7 Beneficial Resources

Beneficial factors for the Fort Jackson installation have been identified in Section 5.1.3.6. Additionally, slash pine has been planted in the former target/downrange hazard area. The slash pine, when mature, will provide beneficial habitat for the Red-cockaded Woodpecker, as well as a beneficial timber product.

5.2.3.8 Demographics

The demographics for the area of the installation are presented in Section 5.1.3.7.

5.2.4 Ecological Profile

5.2.4.1 Habitat Type

The habitat types are similar across the installation and are described in Section 5.1.4.1. Forest cover is the principal vegetative type on Fort Jackson. The primary forest cover type within the FJFC is slash pine and scrub oak; therefore, the habitat type would only be for small mammals (e.g., mice squirrels) and birds. The FJFC site contains maintained grass, sandy areas, and some planted slash pine forest that could provide a habitat for the Red-cockaded Woodpecker.

5.2.4.2 Degree of Disturbance

Minimal to moderate disturbance of flora and fauna species located in the FJFC area is expected due to the operation of R/C model aircraft and routine site maintenance.

5.2.4.3 Ecological Receptors

Potential rare, threatened, or endangered species and species of interest near and on Fort Jackson are discussed in Section 5.1.4.3. It is not likely that any of the species discussed in Section 5.1.4.3 would currently be found in the immediate area of the FJFC. However, it is possible that the slash pine forest will provide a future habitat for the Red-cockaded Woodpecker.

5.2.5 Munitions/Release Profile

5.2.5.1 Munitions Types and Release Mechanisms

Table 5-2 presents a summary of the types of munitions that would be expected based on information collected for this HRR. The mechanisms by which the munitions were released into the environment are also presented in this table. The typical release mechanisms for the former FJFC ranges are intentional activities, such as firing into a target area, and unintentional activities, such as rounds fired falling outside the target area or rounds discarded for various reasons at the firing point.

Table 5-3: Summary of Potential Munitions Types – FJFC

MMRP Site	Potential Munitions	Primary Release Mechanism
FJFC Salerno Ranges	40-mm grenades, Rocket grenades, 66-mm rockets, 35-mm sub-caliber rockets, 3.5-in rockets, M18A1 Anti-Personnel Mine, Practice grenades	Munitions firing, potentially from the following weapons: M79 Grenade Launcher M72 LAW 3.5-in Rocket Launcher M18A1 Anti-Personnel Mine
FJFC Small Arms Ranges	.30-/.50-caliber, 7.62-mm, 5.56-mm	Munitions firing, potentially from the following weapons: Browning .30 M1917 Machine Gun M2 .50 Machine Gun M-60 Machine Gun Springfield Model 1903 Enfield M1917 Rifle M-1 Garand Rifle M-1 Carbine

5.2.5.2 Maximum Probability Penetration Depth

MEC that may be present at the FJFC Salerno Ranges site include 66-mm LAW rockets and 40-mm rifle grenades. The expected depth of penetration in sand for the 66-mm rocket is 10.8 inches below ground surface (bgs), and the expected depth of penetration in sand for the 40-mm grenade is 2.4 inches bgs.

Small arms and hand grenades do not have an associated penetration depth. These and other MC components (such as spent shell casings and residual black powder components and wastes) are expected to have been directly deposited on the ground surface.

5.2.5.3 MEC Density

The greatest density of MEC is expected to be located in the northeast corner of the FJFC Salerno Ranges, since this area is most likely where the Salerno Demonstration M79 rifle grenade range and M72 LAW rocket launcher firing lines were located. The range for the 40-mm grenade was approximately 50 to 400 meters; therefore, the impact zone of the M79 rifle grenade range is within the current borders of the FJFC Salerno Ranges site. The effective range for the M72 LAW rocket is 170 to 220 meters, and its maximum range is 1000 meters; therefore, the impact zone of the M72 LAW is also expected to fall within the FJFC Salerno Ranges site.

5.2.5.4 MEC Scrap/Fragments

The majority of the MEC scrap/fragments are expected to have been deposited as a result of activities associated with the Salerno Demonstration Range, specifically, the M72 and M79 ranges. During the visual survey conducted at the FJFC on June 17, 2004, MEC including 40-mm grenades and 35-mm sub-caliber rockets were observed at the FJFC Salerno Ranges site.

5.2.5.5 Associated Munitions Constituents

As noted in Table 4-2, MC associated with the ranges formerly overlapping the FJFC include black powder (potassium nitrate, sulfur, and charcoal), smokeless powder (nitrocellulose, DNT, dibutylphalate, and diphenylamine), double based propellant (nitrocellulose and nitroglycerin), Pb, Sb, As, Cu, Sn, Zn, Fe, Sr, Mg, and lead styphnate/lead azide. No soil or groundwater samples have been analyzed for explosives within the FJFC; therefore, it is not known whether explosives are present at the FJFC site.

The primary MC of concern associated with the FJFC Small Arms Ranges is Pb. Other MC of concern that may be included in trace amounts are: Sb and Sn, which increase the hardness of bullets; As present in Pb; Cu present in the bullet core alloy; Cu and Zn present in the jacket alloy; Fe from the tips of penetrator rounds; Cu, Zn, Sr, and Mg present in tracer munitions; and lead styphnate/lead azide in the primer mixture.

5.2.5.6 Transport Mechanisms / Migration Routes

The primary transport mechanisms identified for the FJFC site include the following:

Erosion: Since thunderstorms are common during the summer months, erosion could be a factor in exposing buried MEC and in transporting and migrating MC contaminated soil to surface water bodies. Since the topography at the FJFC slopes to the east, it is expected that erosional migration of MEC and/or MC would be in the down slope direction.

Soil Disturbance: Surface and subsurface disturbances can lead to transport and migration of MC from one environmental media to another (soil to surface or groundwater or both) through surface water runoff and erosion. Known soil disturbance activities at the FJFC include land clearing and pine tree planting.

Infiltration: Since much of the FJFC is composed of sand, the potential for MC to migrate from one environmental media to another (surface to subsurface soil to groundwater) through infiltration exists.

5.2.6 Pathway Analysis

5.2.6.1 MEC

The MEC pathway analysis was prepared for the FJFC Salerno Ranges (Figure 5-5). The primary exposure pathway for human and ecological receptors is handle/tread underfoot of surface MEC. The potential for complete pathways exist between surface MEC and all receptors. The potential for complete pathways exist between subsurface MEC and

authorized installation personnel, contractors, and biota. Timber harvesting/planting in this area could lead to contact with subsurface MEC, and biota may nest or burrow in this area causing potential contact with subsurface MEC, as well.

5.2.6.2 MC

MC pathway analyses were prepared for the FJFC Salerno Ranges (Figure 5-6) and the FJFC Small Arms Ranges (Figure 5-7). These MC pathway analyses show a potentially complete pathway for biota for the vegetation exposure route. Biota is expected to ingest vegetation at the site and have a potentially complete pathway for vegetation in the food chain. All other pathways for vegetation in the food chain are expected to be incomplete. Crops are not grown on the site, and domestic animals are not raised on the site; therefore, no complete pathways exist for this exposure route. A potentially complete pathway through the game/fish prey exposure route exists only for biota.

Potentially complete pathways for ingestion and dermal contact exist between surface water/sediment and all receptors expected at the site. The groundwater exposure routes are expected to be potentially complete pathways for all potential receptors since there is an active water supply well located in close proximity to the FJFC.

Potentially complete pathways for all exposure routes for both surface and subsurface soil exist for all receptors. Since access and activities at the FJFC are not restricted, the potential for soil disturbance to occur exists. The subsurface pathway would also be potentially complete for biota because they may nest or burrow at the site.

Figure 5-5: MEC Exposure Pathway Analysis – FJFC Salerno Ranges

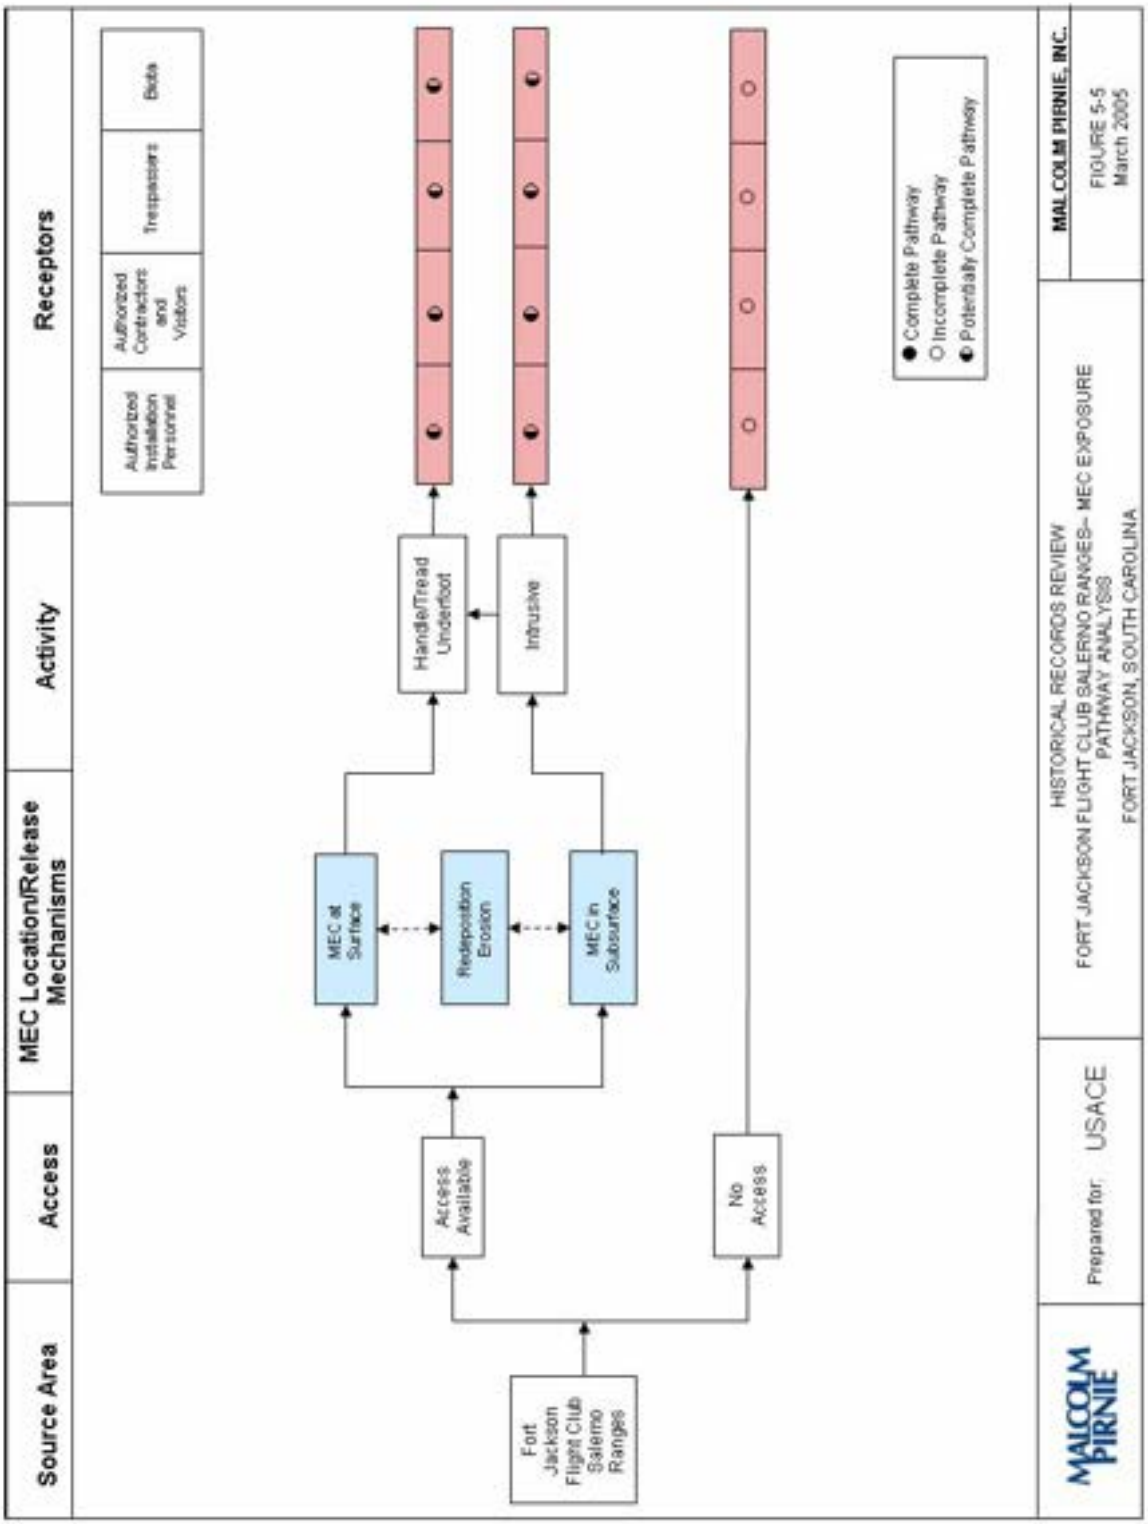

Figure 5-6: MC Exposure Pathway Analysis – FJFC Salerno Ranges

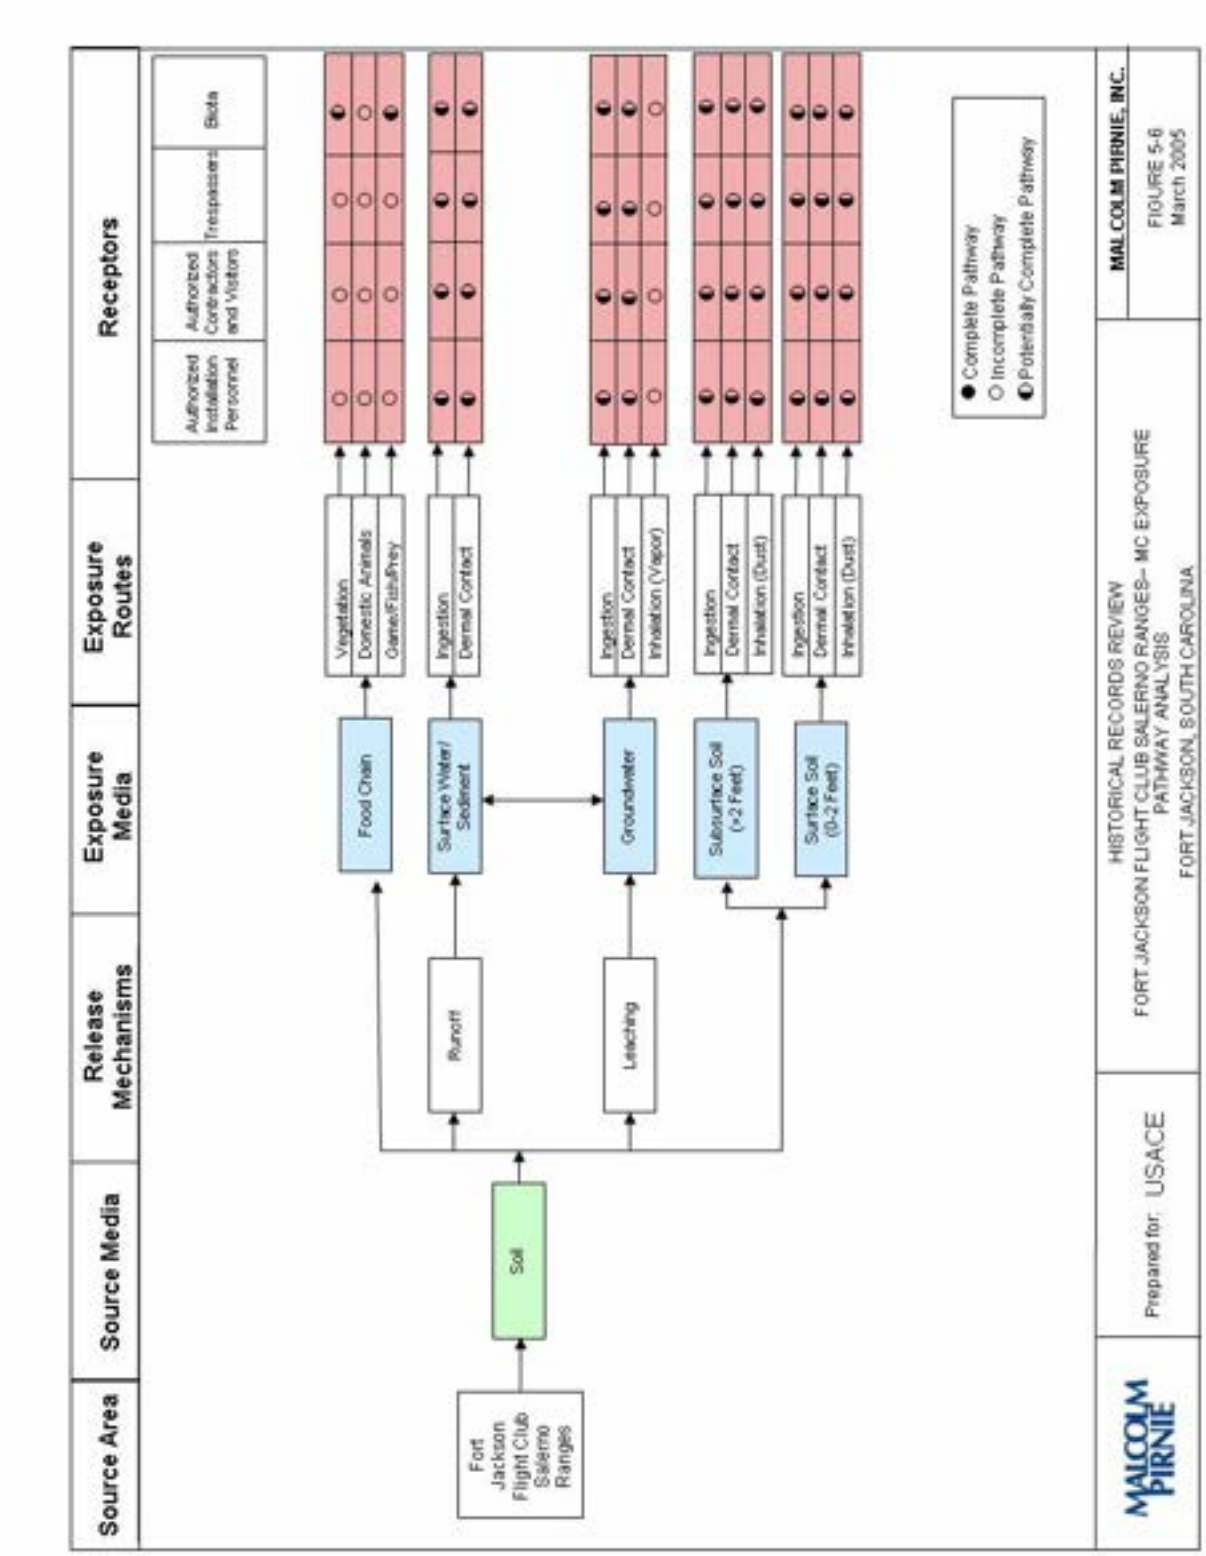

Figure 5-7: MC Exposure Pathway Analysis – FJFC Small Arms Ranges

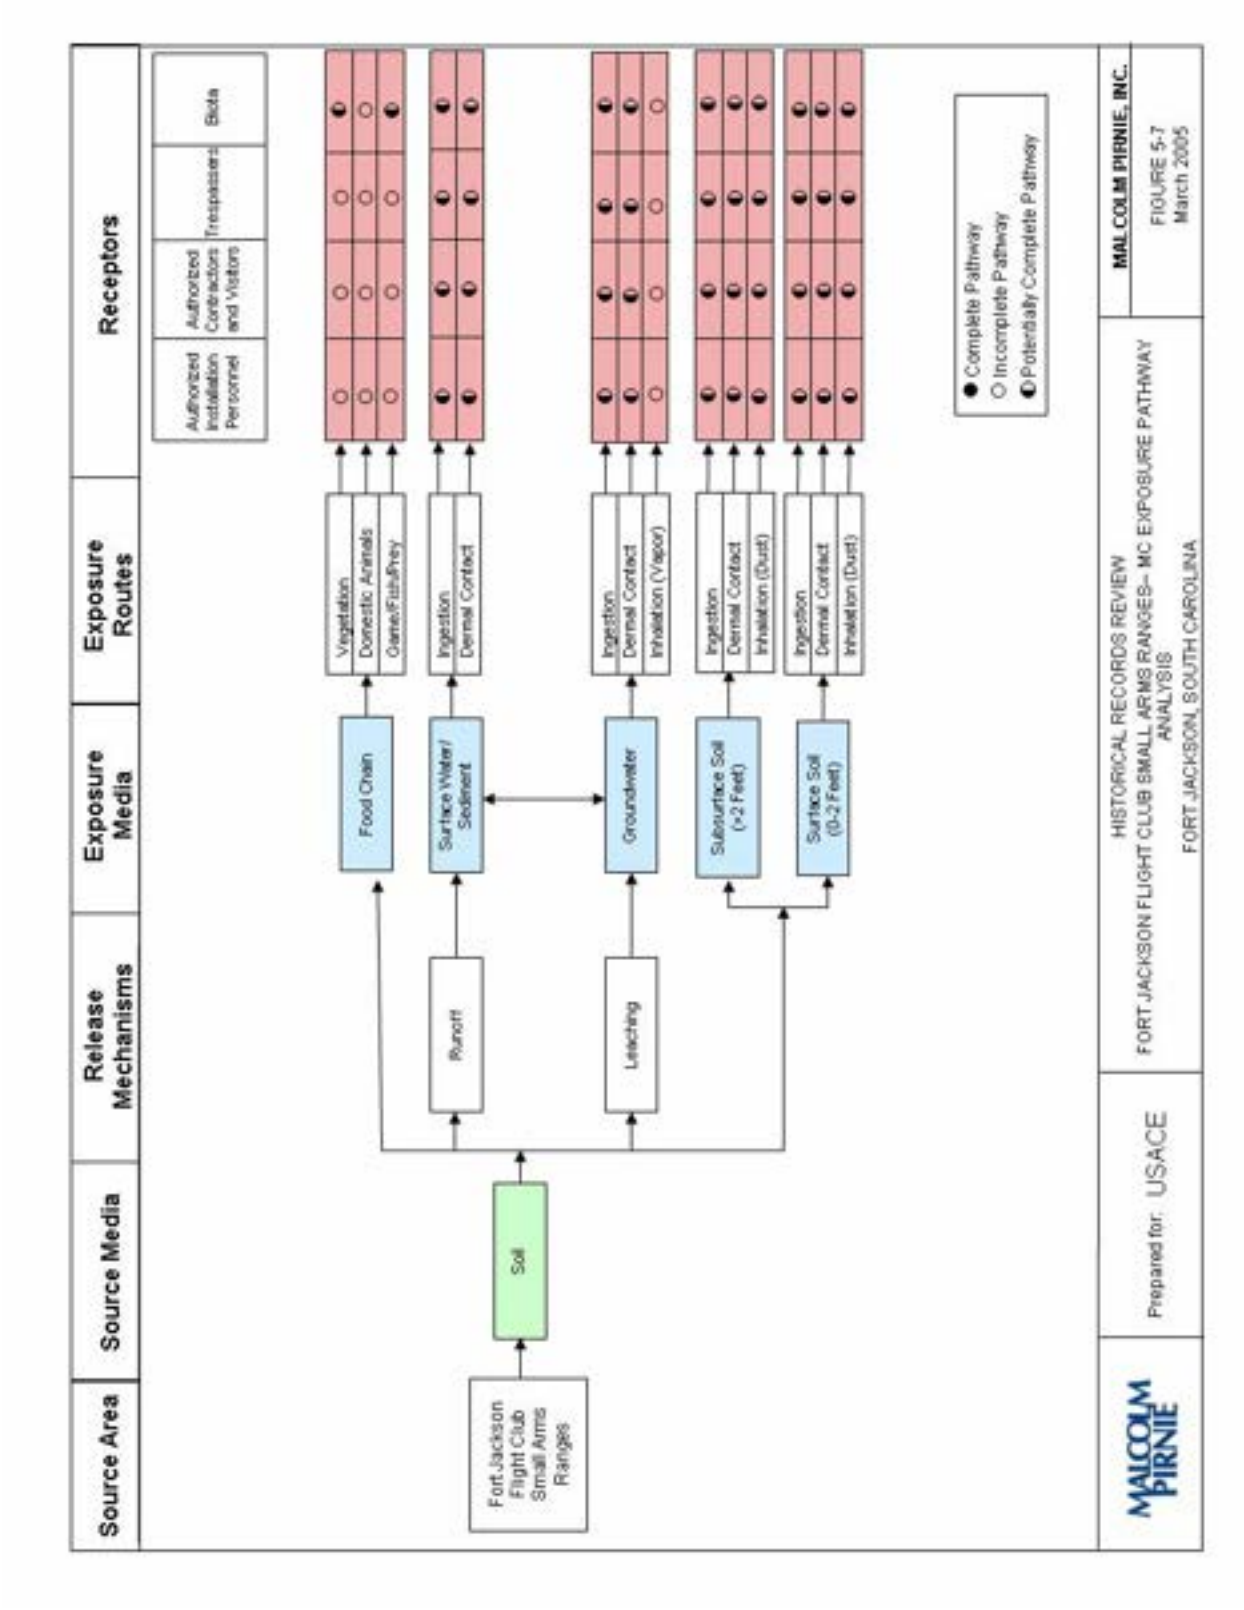

5.3 WESTON LAKE AREA RANGES/SITES

5.3.1 MMRP Site Profile

5.3.1.1 Area and Layout

The Weston Lake Area is located on the southern, central portion of the installation. A total of two sites are located in this area. Geographical features of these sites are briefly described below:

- The Mortar Range (more specifically Mortar Range 5A, 7, and 8 Safety Fans) consists of a 306-acre area that is located in the northern section of the Weston Lake Area. The other than operational portion of the Mortar Range is somewhat trapezoidal in shape and includes the portion of the Submachine Gun Area that is overlapped by the Mortar Range.

- The Submachine Gun Area (more specifically the Dismounted and Moving Vehicle Submachine Gun Area) consists of an approximate 17-acre area located on the northern portion of the Weston Lake Area. The other than operational portion of the Submachine Gun Area is somewhat trapezoidal in shape. The 17-acre area includes only the portion of the Submachine Gun Area not overlapped by the Mortar Range.

5.3.1.2 Structures

The Mortar Range is located about 1/4 mile north of the main recreation facilities of the Weston Lake Area; however, it has not been directly improved by recreational facilities (e.g., camp sites or trails). There are no structures located at the Mortar Range. Portions of the Dismounted Submachine Gun No. 1 Range, the Moving Vehicle Submachine Gun Range, and the Dismounted Submachine Gun No. 2 Range extend across the eastern half of the Mortar Range.

The Submachine Gun Area primarily includes the firing points and target areas of the Dismounted Submachine Gun No. 1 Range. This area has been developed for recreational purposes and currently includes a picnic area, rental cabins, and a small boat launch area.

5.3.1.3 Utilities

There are no utilities located on the Mortar Range. However, the Submachine Gun Area has both overhead and buried utilities for the recreational area.

5.3.1.4 Boundaries

The Mortar Range is bounded to the north, west and east by undeveloped land and to the south by Weston Lake Area.

The Submachine Gun Area is bounded to the north and west by Weston Lake. Recreational facilities are located to the south and east.

5.3.1.5 Security

The Weston Lake Area is located within the boundaries of the Fort Jackson installation. Access to the installation is limited by gates and/or roadblocks on all roads leading into the installation. Access to the installation is restricted to Army personnel, authorized civilian personnel, contractors, and visitors. The Weston Lake Area MMRP sites are located within the Weston Lake Area. The individual sites within the Weston Lake Area are not fenced. However, the Mortar Range has not been directly improved with recreational facilities (e.g., camp sites, trails) and is in a remote location not easily accessible by visitors using the Weston Lake Area. Recreational facilities have been constructed at the Submachine Gun Area.

5.3.2 Physical Profile

5.3.2.1 Climate

Climate is general installation information and is presented in Section 5.1.2.1.

5.3.2.2 Geology

Geology is general installation information and is presented in Section 5.1.2.2.

5.3.2.3 Topography

General topographical information on the installation is given in Section 5.1.2.3.

5.3.2.4 Soil

General soil information for the Fort Jackson Installation is given in Section 5.1.2.4. According to Figure 3.2.4 - Fort Jackson Soils contained in the INRMP, the soil types located within the Mortar Range and Submachine Gun Area consist of Lakeland, Ailey, and Vauclose soils.

5.3.2.5 Hydrogeology

Hydrogeology is general installation information and is presented in Section 5.1.2.5.

5.3.2.6 Hydrology

Hydrology is general installation information and is presented in Section 5.1.2.6.

5.3.2.7 Vegetation

According to Figure 3.3.1.1 - Forest Types of Fort Jackson contained in the INRMP, the predominant forest type located within the Mortar Range is pine plantation. The Pine Plantation forest type is made up mostly of planted longleaf pine and slash pine (*Pinus elliottii*), which is not native to Fort Jackson.

According to Figure 3.3.1.1 discussed above, the predominant forest type located within the Submachine Gun Area is natural pine and pine hardwood. Natural pine includes all natural pine strands. In pine hardwood stands, hardwoods must constitute 21-49% of the overstory basal area, while the remainder is pine of any species.

5.3.3 Land Use and Exposure Profile

5.3.3.1 Current Land Use

The two Weston Lake Area MMRP sites are located in the Weston Lake Area, which is used by the general public for camping, picnics, and other recreational activities. However, the Mortar Range has not been directly improved with recreational facilities (e.g., camp sites) and is in a remote location not easily accessible by visitors using the Weston Lake Area. Recreational facilities have been constructed at the Submachine Gun Area.

5.3.3.2 Current Human Receptors

Current potential receptors of MEC or MC present on the Weston Lake Area ranges include authorized installation personnel, contractors, and visitors, as well as trespassers.

5.3.3.3 Current Land Uses/Activities

Current activities include recreational activities such as camping, swimming, fishing, biking, and hiking. However, the Mortar Range is in a remote location not easily accessible or frequented by visitors using the Weston Lake Area.

5.3.3.4 Potential Future Land Use

No changes to the current land use are planned for this area.

5.3.3.5 Potential Future Human Receptors

The future human receptors are expected to remain the same as the current human receptors. There is no anticipated change in access to the sites.

5.3.3.6 Zoning/Land Use Restrictions

No zoning or land use restrictions are present for this area.

5.3.3.7 Beneficial Resources

Fort Jackson encompasses a wide variety of vegetative site conditions, ranging from bottomland hardwood communities to xeric longleaf pine communities as noted in Section 5.1.3.6. The most predominant forest types on the ranges located within the Weston Lake Area are natural pine and pine plantation. Timber is harvested annually at Fort Jackson, and these ranges may provide a percentage of the annually harvested timber.

It is noted that the SWMU 12 and SWMU 17 sites are located just east of the Weston Lake Area. Additionally, the Red-cockaded Woodpecker is the only endangered animal species identified on the reservation. The Weston Lake Area includes habitat associated with the Red-cockaded Woodpecker. Informational signs (Figure 5-8) are located throughout the Weston Lake Area cautioning people of the potential presence of this endangered species.

Figure 5-8: Red-cockaded Woodpecker Habitat Sign

5.3.3.8 Demographics

The demographics for the area of the installation are presented in Section 5.1.3.7.

5.3.4 Ecological Profile

5.3.4.1 Habitat Type

The habitat types are general across the installation and are described in Section 5.1.4.1. Forest cover is the principal vegetative type on Fort Jackson. The most predominant forest types on the ranges located within the Weston Lake Area are natural pine and pine plantation; therefore, the habitat type would be for small mammals (e.g., mice and squirrels) and birds.

5.3.4.2 Degree of Disturbance

Disturbance of flora and fauna species located in the Weston Lake Area is expected to be moderate during annual timber harvests.

5.3.4.3 Ecological Receptors

Potential rare, threatened, or endangered species and species of interest near and on the Fort Jackson installation are discussed in Section 5.1.4.3. As stated previously, the Red-cockaded Woodpecker is the only endangered animal species identified on the reservation. Habitat exists within the Weston Lake Area.

5.3.5 Munitions/Release Profile

5.3.5.1 Munitions Types and Release Mechanisms

Table 5-3 presents a summary of the types of munitions that were either identified during the limited visual survey conducted at the Weston Lake Area sites or that would be expected based on information collected for this HRR. The mechanisms by which the munitions were released into the environment are presented in this table. The typical release mechanisms for the MMRP sites located in the Weston Lake Area include intentional activities, such as firing into a target area, and unintentional activities, such as rounds fired falling outside the target area or rounds discarded for various reasons at the firing point. It is important to note that in areas that were used for small arms training (i.e., the Submachine Gun Area), MEC are not expected, and the primary concern would be associated with MC.

Table 5-4: Summary of Potential Munition Types - Weston Lake Area

MMRP Site	Potential Munitions	Primary Release Mechanism
Mortar Range	60-mm, 81-mm, 3-in, 4.2-in mortar rounds .30-/.45-/.50-caliber, Live and practice grenades	Munitions firing, potentially from the following weapons: 60-mm, 81-mm, 3-in, 4.2-in mortar systems Overlapping Range Fan(s) weapons: M1A1 Thompson, M1928 Thompson, M3 and M3A1 (Grease) Submachine Gun .30-caliber machine gun .50-caliber machine gun M-1 rifle
Submachine Gun Area	.45-caliber	M1A1 Thompson, M1928 Thompson, M3 and M3A1 (Grease) Submachine Gun

5.3.5.2 Maximum Probability Penetration Depth

The expected depths for the various MEC items associated with the Weston Lake Area MMRP sites are presented in Table 5-5. These expected depths include values for sand, loam, and clay and were obtained from EM 1110-1-4009 Ordnance and Explosives Response, prepared by the USACE. These penetration depths are estimated on a worst-case scenario that assumes that the impact is perpendicular to ground surface and that the ordnance item does not deform upon impact. Small arms do not have an associated penetration depth. These and other MC components (such as spent shell casings and residual

black powder components and wastes) are expected to have been directly deposited on the ground surface.

Table 5-5: Summary of Expected MEC Penetration Depths

Ordnance Item/Weapon	Depth of Penetration (inches bgs)		
	Sand	Loam	Clay
60-mm mortar	13.2	18	27.6
81-mm mortar	32.4	42	64.8
4.2-in mortar	49.2	64.8	99.6

5.3.5.3 MEC Density

MEC presence in the Mortar Range, which includes three mortar range safety fans, is unknown. The other than operational area associated with the Mortar Range (i.e., safety fans) is undeveloped. As mentioned previously, five Howitzer range safety fans, two machine gun range safety fans, one rifle range, the Submachine Gun Area, and five unidentified range fans overlap the Mortar Range. Based on the number of overlapping fans, this area has the potential for MEC presence associated the Mortar Range and possibly from other overlapping ranges. However, MEC presence is expected to be minimal since the other than operational area associated with the Mortar Range lies within the safety fans (not within the direct line of fire) of the mortar ranges and overlapping ranges.

5.3.5.4 MEC Scrap/Fragments

During the June 17, 2004 site walk, MEC scrap and fragments were not observed at the Weston Lake Area MMRP Sites.

5.3.5.5 Associated Munitions Constituents

As noted in Table 4-3, MC associated with the Weston Lake Area MMRP sites include the following: black powder (potassium nitrate, sulfur, and charcoal), RDX, WP, illumination mix, smokeless powder (nitrocellulose, DNT, dibutylphalate, and diphenylamine), double

based propellant (nitrocellulose and nitroglycerin), Composition B, TNT, Octol, Pb, Sb, As, Cu, Sn, Zn, Fe, Sr, Mg, and lead styphnate/lead azide.

5.3.5.6 Transport Mechanisms / Migration Routes

The primary transport mechanisms identified for the Weston Lake Area MMRP sites include the following:

Erosion: Since thunderstorms are common during the summer months, erosion could be a factor in exposing buried MEC and in transporting and migrating MC contaminated soil to surface water bodies such as Weston Lake, located south of the Mortar Range/Submachine Gun Area.

Soil Disturbance: Since timber harvesting and recreational activities occur in this area, the potential for soil disturbance to occur exists. Any surface or subsurface soil disturbance can cause both the transport and migration of MEC and MC. Surface and subsurface disturbances can lead to transport and migration of MC from one environmental media to another (soil to surface or groundwater or both) through surface water runoff and erosion.

Infiltration: Based on the generally sandy soils located within the Weston Lake Area, the potential for MC to migrate from one environmental media to another (surface to subsurface soil to groundwater) through infiltration exists.

5.3.6 Pathway Analysis

5.3.6.1 MEC

The MEC pathway analysis was prepared for the Mortar Range (Figure 5-9). The primary exposure pathway for human and ecological receptors is handle/tread underfoot of surface MEC. The potential for complete pathways exists between surface MEC and all receptors. Since there is no penetration depth associated with hand grenades, MEC in the subsurface is not anticipated. The potential for complete pathways exists between subsurface MEC and

authorized installation personnel, contractors, and biota for the Mortar Range. Timber harvesting in this area could lead to contact with subsurface MEC, and biota may nest or burrow in these areas causing potential contact with subsurface MEC, as well.

5.3.6.2 MC

MC pathway analyses were prepared for the Mortar Range (Figure 5-10) and the Submachine Gun Area (Figure 5-11). The MC pathway analyses displayed show potentially complete pathways for biota for the vegetation exposure route. Biota is expected to ingest vegetation at the Weston Lake Area MMRP sites and have potentially complete pathways for vegetation in the food chain. All other pathways for vegetation in the food chain are expected to be incomplete. Crops are not grown on the sites, and domestic animals are not raised on the sites; therefore, no complete pathways exist for this exposure route. All receptors, except contractors, have potentially complete pathways through the game/fish prey exposure route. This is because the Weston Lake Area offers fishing for authorized installation personnel and their visitors.

Potentially complete pathways for ingestion and dermal contact exist between surface water/sediment and all receptors expected at the sites. The groundwater exposure routes are expected to be partially complete pathways for all potential receptors since there are three active water supply wells located just east of Weston Lake.

Potentially complete pathways for all exposure routes for both surface and subsurface soil exist for all receptors. Since access to and activities in these areas are not restricted, the potential for soil disturbance to occur exists. Also, the subsurface pathways would be potentially complete for biota because they may nest or burrow in these areas.

6 CONCLUSIONS

The following conclusions for the cantonment area, FJFC, and Weston Lake Area MMRP sites were made based on the information reviewed for this HRR.

6.1.1 Cantonment Area Ranges/Sites

The CTT Range Inventory identified four ranges in the cantonment area: the 1000-Yard Range, 600-Yard-Range, Machine Gun Range, and Live Hand Grenade Court 2. Based on maps and aerial photographs reviewed during the preparation of the HRR, the locations of the 1000-Yard Range and the 600-Yard Range were adjusted slightly to the north. The information reviewed for the HRR also revealed the following newly identified ranges:

- 300-Yard Range
- Pistol Range
- Transition Range
- Pistol Range NR 2
- Landscape Target Range
- 1000-Inch Range Nos. 14, 15, 16

In addition, seven other ranges were identified in the area north of Hampton Parkway (Ranges North of Hampton Parkway). Based on changes to the operational range boundary during the HRR review process, these ranges were determined not to be eligible for inclusion in the Fort Jackson SI because they are located in the operational range area.

The CTT Range Inventory listed the Andrew Jackson Range as one of the ten MMRP sites. The Andrew Jackson Range was originally a military small arms range that had been closed. The site has been turned over to the Fort Jackson MWR Department for operation as a recreational small arms shooting range. Because of its current activity and the ongoing

releases that have occurred after September 30, 2002, it was determined that this site is not eligible for evaluation as part of the Fort Jackson SI.

Based on the HRR conclusions, three MMRP Sites are located in the cantonment area. The ranges identified in the cantonment area have been grouped by period of use, type of use, and location to form these MMRP Sites. Although some of these ranges overlap, the range acreages are only counted for the MMRP Site in which they are grouped. A brief discussion of each MMRP Site follows:

The Camp Jackson Ranges include the 1000-Yard Range, 600-Yard Range, Machine Gun Range, 300-Yard Range, and the Pistol Range. These ranges cover an area of 81 acres and were used for small arms training from 1918 through 1920. As such, no MEC and only limited MC are anticipated at the Camp Jackson Ranges.

The Small Arms Ranges East of Chesnut Road include the Transition Range, Pistol Range NR 2, Landscape Target Range, and 1000-Inch Range Nos. 14, 15, 16. These ranges were used for small arms training in the 1940s through the 1970s. As such, no MEC and only limited MC are anticipated at these ranges.

The Live Hand Grenade Court 2 includes a three acre area that overlaps the 300-Yard Range. Acreage for this area has only been included for the Live Hand Grenade Court 2. This range only appears on the 1946 and 1949 source maps. Based on the historical maps, the range was used in the 1940s and possibly the 1950s. The Live Hand Grenade Court 2 is the only range with MEC potential; however, this area has been disturbed by field fortification training (e.g., trenching and using the area to teach fortification techniques) and forestry activities. MEC, if present, would be limited.

Table 6-1, on the following page, provides a summary of the cantonment area MMRP sites an associated sub areas (ranges).

Table 6-1: MMRP Site and Associated Sub Areas Conclusion Summary for Cantonment Area Ranges/Sites

Area	Size	Description
Camp Jackson Ranges 1000-Yard Range 600-Yard Range 300-Yard Range Machine Gun Range Pistol Range	81 acres	Small arms only
Small Arms Ranges East of Chesnut Road Transition Range 1000-Inch Range Nos. 14, 15, 16 Pistol Range NR 2 Landscape Target Range	546 acres	Small arms only
Live Hand Grenade Court 2	3 acres	MEC - Hand grenades

6.1.2 Fort Jackson Flight Club

Additional munitions types at the FJFC were identified during the research for this HRR. Historical maps revealed several overlapping range fans with associated munitions other than small arms. Both firing points/lines and target areas exist within the FJFC. The additional munitions types are associated with the following ranges: an M18AI anti-personnel mine range, an M-79 grenade launcher range, and an M-72 LAW rocket launcher range. During the visual survey conducted at the FJFC on June 17, 2004, possible MEC including 40-mm grenades and 35-mm sub-caliber rockets were observed. Review of HRR information also identified an area at the FJFC that is not overlapped by ranges/range fans. As such, the acreage for the FJFC was revised to only include the 42-area of the FJFC that has had range use. Based on range use, MEC may be anticipated in the northern portion of the FJFC; however, the southern portion of the range was used only for small arms training. As such, the FJFC has been split into two sites: FJFC Salerno Ranges and FJFC Small Arms Ranges. Table 6-2 provides a summary for the FJFC.

Table 6-2: MMRP Site Conclusion Summary for FJFC Ranges/Sites

Site Name	Size	Description
FJFC Salerno Ranges	15 acres	MEC - Rockets Rifle grenades Grenades Claymore mines
FJFC Small Arms Ranges	27 acres	Small arms

6.1.3 Weston Lake Area Ranges/Sites

The CTT Range Inventory identified four ranges in the Weston Lake Area: the Mortar Range, Hand Grenade Court No. 2, the Rifle Grenade Range NR 2, and the Submachine Gun Area. Based on maps and aerial photographs reviewed during the preparation of the HRR, the locations of these ranges were adjusted from the CTT Range Inventory to better represent the areas where the range use occurred. Based on changes to the operational range boundary during the HRR review process, the Hand Grenade Court No. 2 and the Rifle Grenade Range NR 2 were determined not to be eligible for inclusion in the Fort Jackson SI because they are located in the operational range area.

Based on the HRR conclusions, two MMRP Sites are located in the Weston Lake Area: the Mortar Range 5A, 7, and 8 Safety Fans (i.e., the Mortar Range in the CTT Range Inventory) and the Dismounted and Moving Vehicle Submachine Gun Area (i.e., the Submachine Gun Area in the CTT Range Inventory). The ranges have been grouped by period of use, type of use, and location to form these MMRP Sites.

For acreage reporting purposes, the CTT Range Inventory depicted the Mortar Range and the Submachine Gun Area as a contiguous area divided into the Mortar Range (western half) and the Submachine Gun Area (eastern half). However, based on the 1955 and 1956 Training Facilities Maps, the Mortar Range actually covers both the Mortar Range and the Submachine Gun Area reported in the CTT Range Inventory. For the HRR, the Dismounted and Moving Vehicle Submachine Gun Area was changed to include only the area not overlapped by the Mortar Range 5A, 7, and 8 Safety Fans (i.e., the acreage was changed

from 101 acres to 17 acres). The Mortar Range 5A, 7, and 8 Safety Fans acreage was increased from 112 acres to 306 acres to encompass the entire area that was associated in the past with mortar range use. The Mortar Range 5A, 7, and 8 Safety Fans is the only site with a potential for MEC based on historical range use. Table 6-3 provides a summary of the Weston Lake Area MMRP sites.

Table 6-3: MMRP Site Conclusion Summary for the Weston Lake Area Ranges/Sites

Site Name	Size	Description
Mortar Range	306 acres	MEC - Mortars Small arms
Submachine Gun Area	17 acres	Small arms only

Table 6-4, on the following page, summarizes the site identification number changes from the CTT Range Inventory through completion of this HRR. This information clarifies the AEDB-R Site Identification changes that resulted from the HRR conclusions.

Appendix B: Archive Documents

REPRODUCED AT THE NATIONAL ARCHIVE

Sept 18, 1917

BULLETIN, No. 12.

HEADQUARTERS 81ST DIVISION
CAMP JACKSON, COLUMBIA, S. C.

September 18, 1917.

The following proposed changes, Small Arms Firing Manual, are published for the information and guidance of this command:

"SMALL ARMS FIRING MANUAL.

CHANGES No. —.

WAR DEPARTMENT,
WASHINGTON, *August —, 1917.*

The following is added to Appendix II, Small Arms Firing Manual, 1913:

C. *Special Course when time or facilities for regular courses are not available.*

This course will be prescribed for the quick training of troops in rifle practice, when time or facilities for the regular courses are not available.

Success cannot be expected, nor can proficiency in rifle practice be attained by a company in this course, unless it has been thoroughly instructed, and each man should satisfactorily pass the prescribed tests before he fires a shot on the range. Without this thorough preliminary course, and satisfactorily passing these tests, it is a waste of ammunition to let the soldier fire ball cartridges on the range.

The soldier is first given a thorough course of preliminary practice as outlined in paragraphs 1 to 70, inclusive. He is then before being allowed to fire a shot on the target range, given the following tests:

Test I.

Nomenclature of the rifle in so far as is necessary for its efficient care and use.

Test II.

Assembling and dissembling of the rifle in so far as is necessary for its efficient care and use.

Test III.

Care of rifle.

Test IV.

Sight-setting: Normal and peep, with and without

Major Roger H. Williams
Inf.

RG 393, Army Cont Cmds, 1821-1920
Part V, Bulletins & Memoranda
Box 30

deflection. Maximum time limit of 10 seconds in each of not less than 5 consecutive trials.

Test V.

Firing Positions:

(a) Standing,
(b) Kneeling,
(c) Sitting,
(d) Prone,
(e) From parapet, wall top, or other under-rifle rest.
(f) From vertical edge of wall, door, window, tree, or similar position.

Test VI.

Loading from belt, pockets fastened, with a clip of dummy cartridges, in position.

Standing, Kneeling, Sitting, Prone — Maximum time limit of 10 seconds each in best 5 out of 7 consecutive trials.

Test VII.

Sighting: With rifle in sighting rest.

(Third sighting exercise, Par. 27.)

Normal Sight, Peep Sight — Proficiency required in 3 consecutive triangles of sighting with each. Distance 20 feet; no side of triangle to exceed 1-2 inch.

Test VIII.

Aiming combined with trigger squeeze.

Test by means of:

(a) Target machine,
(b) Aiming Rod device,
(c) Belgian aiming device, or
(d) Perforated bullseye over instructor's eye.

(Methods used to be noted by abbreviations M., R., B. and P., respectively.)

(a) Standing,
(b) Kneeling,
(c) Sitting, and
(d) Prone.

Test IX.

Rapid Loading, aiming and firing: Load from belt and simulate fire with two clips of dummy cartridges. Tested by means of:

(a) Aiming rod device, or
(b) Belgian aiming device, or
(c) Perforated bullseye over instructor's eye.

(Method used to be noted by abbreviations R., B. and P., respectively.)

In positions:

Standing,
Kneeling,
Sitting, and
Prone.

Time of each:

1 minute,
1 minute, 10 seconds,
1 minute, 10 seconds, and
1 minute, 20 seconds, respectively.

Test X.

Flinching:

In prone position. The rifle will be so manipulated by the instructor that the man under test does not know whether or not it is loaded. Service ammunition to be used.

Known Distance Practice.

An annual allowance of 150 rounds per man is authorized for Known Distance Practice, which includes Short Range Practice, Midrange Practice and Practice with Telescopic Sights.

Short Range Practice.

All firing from a typical trench, bayonet fixed except as noted, rifle resting on parapet.

REPRODUCED AT THE NATIONAL ARCHIVES

Instruction.

Table 1.—Slow Fire.

Range Yards	Time	Shots	Target	Position and Type of Trench	Sight
100	No Limit	10	A-4	Prone	Leaf
200	" "	10	A-4	Standing	5 leaf and 5 battle sight
300	" "	15	A-4	Standing	10 leaf and 5 battle sight.

(a) One-half of firing with leaf sight at this range will be with bayonet not fixed.

105 points out of possible 175 in slow fire at bullseye target necessary to advance to slow fire at figure target.

Table 2.—Slow Fire.

Range Yards	Time	Shots	Target	Position and Type of Trench	Sight
100	No Limit	5	Head	Prone	Leaf
200	" "	5	F	Standing	"
300	" "	5	F	"	"

9 hits out of possible 15 required to advance to rapid fire.

Table 3.—Rapid Fire.

Range Yards	Time	Shots	Target	Position and Type of Trench	Sight
100	One Minute	10-20 (b)	Head	Prone	Leaf
200	" "	10	F	Standing	"
300	" "	10	F	"	"

18 hits out of possible 40 required to advance to Record Practice.

Soldiers who fail to make the necessary points to advance are given further instruction practice to the limit of the ammunition allowance.

Record.

Table 4.—Rapid Fire.

Range Yards	Time	Shots	Target	Position and Type of Trench	Sight
100	One Minute	10-20 (b)	Head	Prone	Leaf
200	" "	10	F	Standing	"
300	" "	10	F	Standing	"

(b) At this range the soldier must fire 10 rounds; he may fire as many more as he can up to 20 rounds and receive credit for every hit he makes. Soldier is penalized 1 point for each round less than ten that he does not fire.

Total shots—130.

Mid Range Practice.

For all men who have made 25 hits or more in Record Practice.

Table 5.—Slow Fire.

Range	Time	Target	Shots	Position
500	No Limit	B	10	Prone
600	" "	B	10	Prone

Every effort will be made to teach the men the effect of wind, light and temperature, and the value of small changes in elevation and windage.

No report of this firing will be required, although a record of it will be kept in each company.

Practice With Telescopic Sights.

After Mid Range Practice has been completed, the four best enlisted shots of the company will fire as prescribed in Par. 117.

Combat Practice.

Combat Practice, individual and collective, will be fired by an organization after the completion of the Known Distance Practice.

REPRODUCED AT THE NATIONAL ARCHIVES

REPRODUCED AT THE NATIONAL ARCHIVES

An annual allowance of 50 rounds of ammunition per man, to be expended under the direction of the regimental commander, is authorized for this practice.

Targets.

Target A-4 is the A target, as described in Par. 258, cut down to 4 feet square. The rapid fire is conducted as at present prescribed under Procedure Rapid Fire, page 71, with the exception that at all ranges the soldier assumes the firing position before the command "Ready" is given.

The Head Target is the top of the E Target cut off 12 inches from the top. (C. S. A. F. M. No—, Aug.—, 1917.) (353.1, A. G. O.)

Small Arms Target Ranges for Divisional Training Camps.

1. With reference to the attached letter (copy herewith) from the Adjutant General of the Army, dated Washington, [illegible] 1917, in relation to the selection of suitable Rifle Ranges for Camp Jackson, attention is requested as to the progress made in the selection of a suitable Rifle Range for Camp Jackson, showing [illegible]

[illegible]

Wm. A. Burnett
Major General, U.S.A.

ADJUTANT GENERAL
In Absence of Department Commander.

1st Ind. CMD-C

HQ., 81st Div., Camp Jackson, S.C., October 17, 1917.—To Commanding General, Southeastern Department, Charleston, S. C.

1. A suitable small-arms range adjacent to this camp has been selected and surveyed and work of clearing has begun. Target material is either on hand or en route and the range will be ready for use before the troops are prepared to use it.

2. The range lies adjacent to the cantonment site, about a mile and a half east of the nearest barracks, and is part of the large tract, a three year lease hold of which is to be obtained under authority of the War Department, by condemnation proceedings. The U. S. Attorney is now engaged in the preliminary work of instituting legal proceedings, but as many of the property owners of the tracts on which the range, proper, is situated have given their consent to the use of the land, and work was begun without waiting for the actual institution of condemnation proceedings.

3. The range will have 200 targets for 300-yard rifle practice, 24 machine-gun targets, 34 600-yard targets, and 8 1000-yard targets. All can be used simultaneously. Any part of the 300-yard range can be used for pistol targets and in addition good sites for pistol practice are available nearer camp.

FILE CANTONMENT RECORD

RG 393, US Army Cont. Cmds, 1821-1920
Part II, Camp Jackson
Gen corr, 1917-20
30X 28

4. The State has a 24 target 600-yard range at Styx, S. C., but it is fourteen miles from camp and not available for practice by this command, unless a camp were to be established there.

Major General, U. S. A.,
Commanding.

HEADQUARTERS 306th ENGINEERS
CAMP JACKSON, COLUMBIA, SOUTH CAROLINA.
December 17th, 1917.

FROM: The Division Engineer, 81st Division.

TO: The Commanding General, 81st Division.

SUBJECT: Depopulation of area beyond target range.

1. In view of the fact that it is expected to begin target practice on the small arms range about January 1st, 1918, it is recommended that steps be taken for the removal of all inhabitants in the tract to the east of the range for a distance of three miles, and to post danger signals and signs on all roads leading in behind the butts for the same distance to the eastward.

AMG/G-3.

684 - Target Ranges.

684 - Target Ranges

Acting Chief of Staff

Brigade Commanders and Commanding Officer 306th Engineers.

Small Arms Target Range.

1. The Commanding General desires that you be informed that the small arms target range will be ready for use on the 1st. of January. The Range Officer will assign on the 300 yards range, 24 targets to each infantry regiment, to the 316th Field Artillery, and 306th Engineers for purposes of instruction. The 316th Field Artillery will be grouped with the 161st. Inf. Brigade and its small arms practice carried on under the general supervision of the Commanding General of that Brigade. The Range Officer will apportion targets on the 600 and 100 yardsranges in such a manner as future developments may indicate best.

2. The Commanding General desires that the first work on the range be devoted to the instruction of officers. Brigade Commanders and Commanding Officer, 306th Engineers, will make necessary arrangements for systematic instruction. The known distance course for all men now in the command will be completed on or before the 7th of February, 1918, leaving the range free after that date for the instruction of men who may have joined in the interim.

3. Attention is invited to paragraph 4, G.O. 43, December 8th, these Headquarters, which gives the schedule of gas instruction for the command.

4. It has been stated that battery harness will not be available for National Army divisions before the first of March. We have applied by telegraph for harness for one battery, which there seems to be a probability of our receiving in the near future.

5. Infantry field equipment is not yet in sight. Bayonets for Enfield rifles will be available.

6. With the above considerations as to equipment for instructions and allotment of time for gas instruction and small arms practice, the Commanding General desires that you submit your programs for the month of January not later than the 25th instant, for approval.

Major, Inf., U.A.

CONSTRUCTING QUARTERMASTER

CAMP JACKSON

Columbia, S. C.

January 17, 1918.

From: Constructing Quartermaster, Camp Jackson.
To: Officer in Charge of Cantonment Construction,
Washington, D. C.
-Completion Report-

1. In accordance with your letter of November 2nd, requesting report of operations during the construction of this cantonment, file 600.914 CR-C (General), the following is submitted:
We have the following recommendations to make for consideration in case additional cantonments are constructed:

2. TIMEKEEPING: The practice employed at this cantonment of having the Government keep the time is not in my opinion a proper one to use in future work. The principal objection to it is that the contractor loses a certain control over his men. I believe that the actual disadvantage of this system more than outweighs the slight additional cost of having the contractor keep his own time and having a smaller Government force check it. I consider the practice of having booths for checking the men in and out essential.

3. PAYROLL SIGNATURES: I respectfully call attention to the practice of requiring signatures on pay rolls. With laborers this resolves itself into a farce, as practically none of them sign their names, and in view of the fact that the making a mark is a prefunctory practice, I believe that in the interest of efficiency the requirement should be abolished, and the signatures omitted. This is the practice which practically all large contracting firms have adopted.

4. COMMISSARY: I believe more efficient results will be obtained by compelling the contractor to sublet his commissary so that he may be able to devote his entire time to the actual performance of the work. The practice of running the commissary for profit has become so general that it is difficult for contractors to form the idea that the commissary on these emergency projects should be run on a cost basis.

5. SECRET SERVICE AGENTS: Secret service agents should be assigned to each project, as soon as actual construction commences. We worked here several months without one and the work done by the agent after he arrived showed that his services were necessary.

6. NEWSPAPER ADVERTISMENTS: Contractors in signing the contracts should be given to understand that no newspaper advertisements shall be placed in localities where other emergency work is being performed. The same applies to solicitation of labor from other Government projects. We have had a great deal of difficulty from that source at this cantonment due to the fact that wages paid elsewhere have been very much higher and that distance does not prevent the men from going to a new job in view of the fact that their transportation is refunded.

DECLASSIFIED
Authority NND 803038
By CO NARA Date 3-24-04

2.00 and $3.00, the original being delivered to the employee and the duplicate being held by the time-keeper's office. In order to have a signed evidence of payment (although the payment was only in the nature of a commissary ticket) in case the employee made no more time than he used up in Commissary credit the checks were designed to show the signature of the employee to whom they were issued.

A form, Requisition for refund of Transportation, was used in cases where transportation was refunded employees who had been on the work one continuous week or more.

Two forms were used in conjunction in cases where there were complaints of shortage, in time.

Other forms used were: A card record of the monthly foreman,

An outside time checkers report, was used in a bound book of 100 pages each. The outside checking department also kept a complete check on livestock and equipment, same being reported on a separate form. This department also checked teams, reporting same on "Team report".

A Report of Discharge Checks issued for the information of the Superintendents, and showing the total number of discharge checks issued daily.

74. The property on which the rifle range is located is situated east of the Cantonment. It is a strip of land 13200 feet wide; it averages about 42000 feet in length, and contains 13093.81 acres. It is rolling sand hill country covered principally with scrub oak, of the black jack variety, interspersed with a few pine trees, and is very sparsely settled. This land was largely acquired by condemnation proceedings. In laying out the 300 yard rifle range it was found that the lay of the land would not permit of shooting directly from the firing trench to target trench without danger of the bullets going over the property line, and so in order to take advantage of the ridges, which do not lie parallel to the property line, it was necessary to construct the trenches in echelon. This required slightly more trenching work but formed a layout which was so much more practical that it was decided to do the work, and it was all completed prior to January 1st. The method used in constructing the trenches has already been described in Paragraph 6.

75. All of the field engineering at this Cantonment was handled by the Field Engineer, Mr. James E. Gibbons, and the Engineering and Inspecting force was recruited from all over the East. By forming our own engineering organization, we avoided the payment of any engineering fees excepting the salaries of the men themselves. The only exception to this was the contract with the Supervising Engineer, Mr. P. H. Norcross, who was paid on contract a salary of $7500, plus his expenses, for designing the sewer system, water system, etc.

76. Two of the Commissioned Officers mentioned in Paragraph 3, Captains Frisbe and Holmar, not being up to the Standard, were released about August 4th and were sent to other Camps. Captain Moore, who had been in charge of the property account, was ordered away for similar duty elsewhere, we were sorry to lose his services. The other three officers stayed on the job until its completion and formed a very well-balanced staff-- Capt. Crunden having charge of Administration, Capt. MacDonald supervising the building operations, fire protection and equipment installations, and Capt. Dinkins having charge of transportation. The faithfulness and ability of these men are largely responsible for the completion of the work.

77. In appendix B we have shown rates of pay of the various classes of labor employed at Camp Jackson.

HEADQUARTERS, CAMP JACKSON,

Columbia, S. C.,

614 (C) Misc. Div. July 23, 1918.

From: The Commanding General.

To: The Adjutant General of the Army, Washington, D. C.

Subject: Report on Small Arms Range, Camp Jackson, S. C.

1. Pursuant to instructions in letter from the Adjutant General's Office, War Department, Washington, D.C., July 13, 1918, the following report is submitted:

(a) There is one rifle range, four miles from the center of camp, with targets as follows: Short range (100, 200 and 300 yards), two hundred (200) targets. Mid range (500 and 600 yards) thirty-four (34) targets. Long range (800 and 1000 yards) six (6) targets.

(b) There is no pistol range. The short range for rifle firing can be used for pistol range by trimming paper targets to fit 4 x 4 foot frames.

(c) There are two machine gun ranges (1000 inch ranges) right in camp. One on the east side and one on the west side of Camp. These are small ranges and were used for the training of officers. One machine gun range (1000 inch range) of seventy-two (72) targets, on tracks, four miles from the center of camp.

(d) There are three Combat firing ranges for small arms and machine guns. Combat range No. 1 is four miles from center of camp. Combat Ranges Nos. 2 and 3 are five miles from center of Camp.

(e) Artillery range of 14000 by 6000 yards four miles from center of Camp with sufficient capacity for training one Brigade of Field Artillery.

2. The facilities are sufficient for the training of a division. The ranges reported upon were used by the 81st Division and were considered ample.

3. A map is submitted herewith showing location of ranges.

A. G.

RECEIVED
JUL 30

REPRODUCED AT THE NATIONAL ARCHIVES

REPRODUCED AT THE NATIONAL ARCHIVES

July 13, 1918.

From: The Adjutant General of the Army.

To: The Commanding Officers of all Regular Army, National Guard, and National Army Camps and Cantonments.

Subject: Small Arms Ranges at Divisional Camps and Cantonments.

The Secretary of War directs that a report be submitted as to the facilities available at your camp for the instruction of troops in small arms and machine gun firing covering:

(a) Rifle ranges, distance and number of targets.
(b) Pistol ranges, number of targets.
(c) Machine gun ranges (1000 inch ranges), number.
(d) Combat firing ranges for small arms and machine guns.
(e) Artillery ranges.

The report should show the distance of the ranges from the center of the camp or garrison, and whether or not the facilities are sufficient for the training of a division. If possible, a map should be submitted. If the facilities of any class are not sufficient the report should show what measures are necessary in order to secure them.

Adjutant General.

GENERAL COMPLETION REPORT

ON

NORTH CAMP JACKSON

AS ABANDONED OF FEBRUARY 28, 1919.

H. J. Macdonald

CAPTAIN, Q. M. CORPS,
CONSTRUCTING QUARTERMASTER.

RG 92 [illegible]
E. 1974-A Completion Reports [illegible]
P. 891

THE CONTRACT

The contract is the ordinary Government form for emergency work which in this case constituted the construction of an Artillery Cantonment near Camp Jackson, S. C. to be known as North Camp Jackson.

The contract was made and concluded the 2nd day of September, 1918, by and between the HARDAWAY CONTRACTING COMPANY, Columbus, Georgia, represented by B. H. Hardaway, it's President, party of the first part, hereinafter called "The Contractor", and the UNITED STATES OF AMERICA, by R. C. Marshall, Jr., Brigadier General, U. S. Army, acting by the authority of the Secretary of War, party of the second part, hereinafter known as "Contracting Officer."

On September 6th, 1918, in accordance with the approval of the Assistant Secretary of War under date of August 21st, 1918, authority was given the Constructing Quartermaster, North Camp Jackson, to proceed with the construction of a Field Artillery Cantonment.

The amount approved for this construction was Nine Million Dollars ($9,000,000).

The authorization number for the construction of the above named Artillery Cantonment was Project Number 6015-1.

THE PROJECT

LOCATION

Attached find Appendix "C" showing location of North Camp Jackson with respect to Camp Jackson and the City of Columbia, S. C. As is shown on this Appendix you will note that the two camps proper are distant by about two miles and North Camp Jackson is distant from Columbia by about seven miles.

The main highway connecting the City of Columbia and North Camp Jackson is known as the Two Notch Road or the highway connecting the City of Columbia and the City of Camden, S. C. Dents Pond, popular for its bathing, is located equidistant from the two sites. The main road to Camp comes off said Two Notch Road at what is known as Dents Station on the Sea Board Air Line Railway.

The site for the Artillery Camp was picked so that its drill ground lies on a very long high ridge forming the divide between two creeks - Jackson Creek being on the western side of the Camp and Gill Creek on the eastern side, both of which flow into the above spoken of Dents Pond.

The Constructing Quartermaster upon arrival on the site August 26th, 1918, found that about six hundred and eleven (611) acres, more or less, of the wood land had been cleared off by the forces of the Harry F. Hann Contracting Company who was the contractor on some improvements made at Camp Jackson and who anticipated the con-

tract for the construction of North Camp Jackson.

On September 4th, 1918, the work of clearing was turned over to the Contractor, The Hardaway Contracting Company, who finished same. Construction equipment and teams were requisitioned at once and on the above date construction had begun on a temporary spur track from the Sea Board Air Line Railroad serving the Camp.

RESERVATION AND BOUNDRIES

Attached find Appendix "D" showing the boundries of the reservation and the acreage contained in same. The letters shown on this plan refer to detailed plans which are shown on an attached Appendix lettered "D-1". Blue prints or original plans are on file in the office of the C.Q.M., Camp Jackson.

The parcel lettered "A" or the original Camp Jackson area contained eleven hundred and ninety two (1192) acres, Parcel "B" contains fifteen hundred and forty five (1545) acres, Parcel "F" the tract covered by North Camp Jackson contains five thousand seven hundred and sixty five (5765) acres. The total acquisition constitutes approximately thirty six thousand two hundred and forty five (36,245) acres, more or less.

8

RAILROADS

Attached find Appendix "J" showing railroad layout. The main line of the Sea Board Air Line Railroad forms the western boundary of the reservation. This being the only common carrier in the vicinity it was readily found necessary to construct a spur for the purpose of distributing the construction material in the construction area. The Supervising Engineer had already begun a location for this spur which in the opinion of the Constructing Quartermaster, was much larger and more expensive than was necessary. The second day on the site, the Constructing Quartermaster and a party reconnoitered and finally selected a location which proved to be at least a mile shorter and far less expensive. Three days later construction was begun on same and by September 16th, 1918, accommodation for 100 cars was made.

The only difficulty encountered was a swamp over which was built a fourteen foot (14') trestle about 400' long, a photograph of which is attached. This is known as the trestle crossing Jackson Creek. This temporary line is shown on Appendix "J". It was built on the shortest course (with a maximum allowable grade of 2%) to the drill grounds; thence down drill grounds giving as near as possible equal distribution of material to all construction. This constituted a length of 13786 lin. feet of which about 5300 lin. feet was used as permanent line, about 1500' being used in connection with track serving Quartermaster's

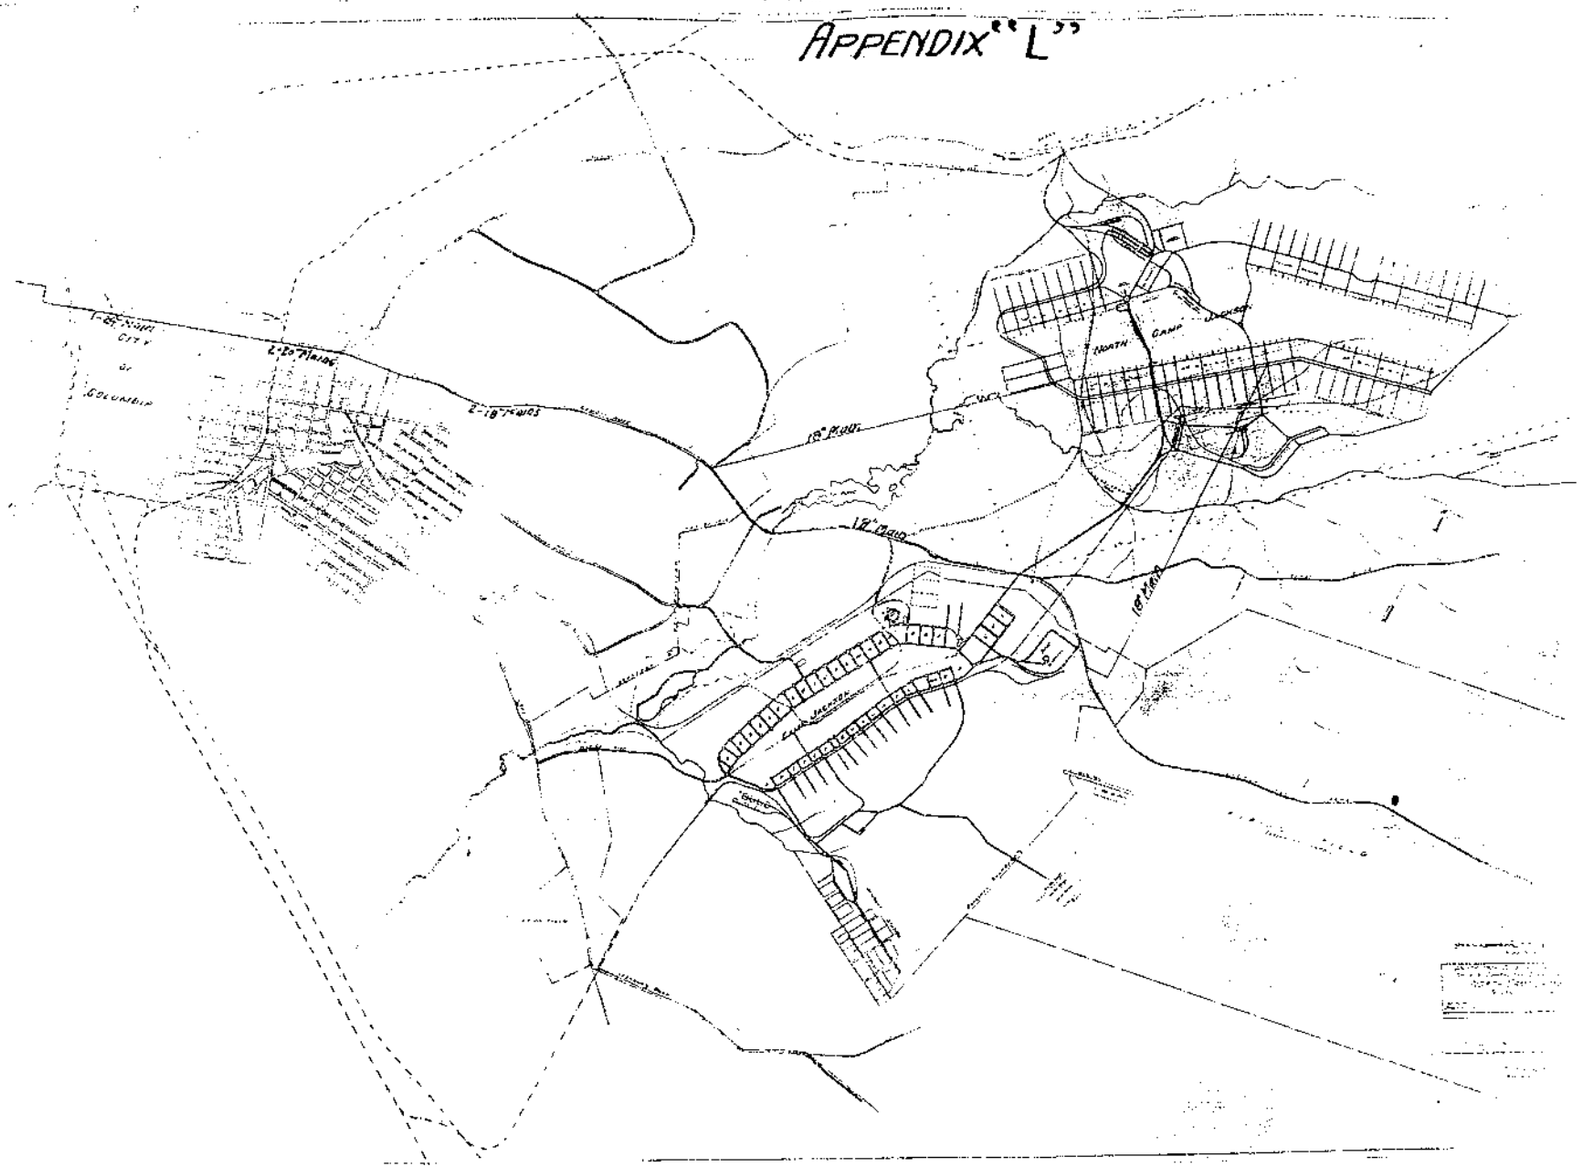
APPENDIX "L"



HEADQUARTERS CAMP JACKSON,
Columbia, S. C.

DAILY BULLETIN NO. 32.

Wednesday, February 11, 1920.

THE FOLLOWING IS PUBLISHED FOR THE INFORMATION AND GUIDANCE OF ALL CONCERNED. NOTE:- Organization commanders will be held responsible for the compliance by all members of their commands with all orders published in this Bulletin.

1. CAUTION! ! FIRING ON TARGET RANGE!

1. ON FRIDAY, FEBRUARY 13TH, FROM 8:00 TO 11:00 A. M., THERE WILL BE COMBAT FIRING EXERCISES ON THE SMALL ARMS TARGET RANGE, TWO MILES EAST OF CAMP. THE DIRECTION OF FIRE WILL BE FROM WEST TO EAST. ORGANIZATION COMMANDERS WILL CAUTION THEIR COMMANDS TO KEEP OUT OF THIS AREA ON THAT DATE.

2. ECONOMIC USE OF LONG-DISTANCE PHONE CALLS.

1. In placing Long Distance Telephone Calls, the following instructions will govern:-

2. Unless it is especially desired to speak to some particular party at the other end, officers will not place a "Person to Person Call" but will place a"STATION TO STATION CALL" in the following manner:-

"Captain Jones, 123, Camp Jackson calling the Zone Supply Office (not officer) at Atlanta". Upon being questioned by Long Distance whom you wish to converse with, the reply will be "ANYBODY" and NOT "anybody who can talk business" or similar phrase.

3. The following form will be used only when it is necessary to converse with some particular person:-

"Captain Jones, 123, Camp Jackson calling Captain Smith, Zone Supply Office, Atlanta".

For this person to person service a higher rate is charged.

3. KAHN TAILORING COMPANY. BRANCH DISCONTINUED.

1. The Agency of the Kahn Tailoring Company which has been maintained at the Central Camp Exchange has been discontinued.

over.

DAILY
BULLETIN
NO. 33.

Thursday, February 19, 1920.

THE FOLLOWING IS PUBLISHED FOR THE INFORMATION AND GUIDANCE OF ALL CONCERNED. NOTE:- Organization commanders will be held responsible for the compliance by all members of their commands with all orders published in this Bulletin.

1. ENLISTED MEN TO REPORT AT CAMP HEADQUARTERS.

1. Organization commanders will send all enlisted men of their units, who have served at Camp Jackson less than three months and who are not enrolled in any school to Camp Headquarters on TUESDAY, FEBRUARY 24TH, 1920, D.B.L. These men will be reported to the Director of Schools.

2. CAUTION! FIRING ON TARGET RANGE.

1. ON FRIDAY, FEBRUARY 20TH, from 8:00 to 11:00 A.M., THERE WILL BE COMBAT FIRING EXERCISES ON THE SMALL ARMS TARGET RANGE, TWO MILES EAST OF CAMP. THE DIRECTION OF FIRE WILL BE FROM WEST TO EAST. ORGANIZATION COMMANDERS WILL CAUTION THEIR COMMANDS TO KEEP OUT OF THIS AREA ON THAT DATE.

3. POST EXCHANGE MONTHLY INVENTORY AND CREDIT NOTES.

1. The inventory of the Post Exchange will be made on the 25th of the month, except that when that date falls on Sunday, inventory will be made on the following day.

2. Credit Notes may be issued to enlisted men by Company, Battery and Separate Detachment Commanders on any day of the month but the required report of such issue will be made to the Exchange Officer on the 25th of each month. Notes issued between the 25th and last day of the month will be reported on the 25th of the following month.

3. Special care will be exercised by above mentioned commanders to see that the correct amount of notes issued is reported in order to expedite the checking and cancelling of these notes on pay day.

4. Instructions contained in paragraph 2 of Daily Bulletin No. 12, these Headquarters, January 16, 1920, in conflict with the above are rescinded.

BY COMMAND OF MAJOR GENERAL READ:

W. D. REACH,
Col., Cav., U.S.A.,
Executive Officer.

OFFICIAL:

JAMES E. MATHERNE,
Major, A.G.D., U.S.A.
Camp Adjutant.

HEADQUARTERS CAMP JACKSON,

DAILY
BULLETIN
NO. 42.

Tuesday, February 24, 1920.

THE FOLLOWING IS PUBLISHED FOR THE INFORMATION AND GUIDANCE OF ALL CONCERNED. NOTE:- Organization commanders will be held responsible for the compliance by all members of their command with all orders published in this Bulletin.

1. MEETING OF RANGE OFFICERS OF ALL ORGANIZATIONS.

1. A meeting is directed of the range officers of all organizations at the office of the Camp Signal Officer at 11:00 a. m. Wednesday, February 25, 1920.

2. Range Officers will find out from their organizations the number of men their organizations will have to fire on the range for 1920, the season to commence at an early date.

3. All range officers are advised of War Department letter of January 31, 1920 to Commanding General, Southeastern Department which states:-

"The Small Arms Firing Manual, 1913 1t 38mg revised.....Course "A" will be prescribed for all troops armed with the rifle as the principal weapon for offensive combat. This includes Infantry, Cavalry and Engineers. The Course provides for firing at 200, 300, 500 and 600 yards on Targets "A", "B", and "D".

Course "B" will be prescribed for all troops armed with the rifle as a weapon for defensive action only. This includes Motor Transport Companies, Balloon Companies, Headquarters Troops of Infantry Divisions, Coast Artillery Corps, and miscellaneous individuals armed with the rifle. This course provides for firing at 200 yards only on Target "A"."

4. Organizations of Camp enumerated to fire in this letter which have no range officer will send a representative to the meeting to act as such.

2. CAPTURED ENEMY MATERIAL.

1. Captured enemy material held by individuals or organizations in this camp which has not been reported to the Ordnance Department will be listed and the lists turned in to Camp Headquarters without delay.

(page one) over.

Wednesday, March 3, 1920.

THE FOLLOWING IS PUBLISHED FOR THE INFORMATION AND GUIDANCE OF ALL CONCERNED. NOTE: Organization commanders will be held responsible for the compliance by all members of their commands with all orders published in this Bulletin.

1. CAUTION! FIRING ON THE TARGET RANGE! ! !

ON FRIDAY, MARCH 5, 1920, FROM 8:00 TO 11:00 A. M. THERE WILL BE COMBAT FIRING EXERCISES ON THE SMALL ARMS TARGET RANGE, TWO MILES EAST OF CAMP. THE DIRECTION OF FIRE WILL BE FROM WEST TO EAST. ORGANIZATION COMMANDERS WILL CAUTION THEIR COMMANDS TO KEEP OUT OF THIS AREA ON THAT DATE.

2. REPETITION OF WAR DEPARTMENT ORDERS REGARDING ARMY MUSICIANS.

1. Attention is again called to paragraph 261, A. R. It is reported that the provisions of the above regulation as to unlawful competition with local civilian musicians have been violated in specific instances since the publication of Paragraph 2, Daily Bulletin No. 43 these Headquarters.

2. Regimental commanders will take the action necessary to prevent their respective bands or any members thereof from furnishing music outside the limits of the reservation when the furnishing of such music places them in competition with local civilian musicians.

DAILY BULLETIN NO. 77.

Thursday, April 15, 1920.

THE FOLLOWING IS PUBLISHED FOR THE INFORMATION AND GUIDANCE OF ALL CONCERNED. NOTE:- Organization commanders will be held responsible for the compliance by all members of their commands with all orders published in this Bulletin.

1. CAUTION! FIRING ON THE TARGET RANGE.

1. THERE WILL BE FIRING ON THE SMALL ARMS TARGET RANGE SATURDAY, APRIL 17TH FROM 8:00 TO NOON. ORGANIZATION COMMANDERS WILL CAUTION MEMBERS OF THEIR COMMANDS TO KEEP OUT OF THIS AREA ON THAT DATE.

2. REGARDING THE PURCHASE OF AUTOMOBILE EQUIPMENT.

1. Officers wishing to purchase automobile equipment from Motor Transport Corps at cost price will arrange to transact such business with the Motor Transport Supply Officer on WEDNESDAY mornings only, between the hours of 8:00 a. m. and 11:30 a. m. at the Motor Transport Corps Repair Shops. On account of the shortage of personnel no orders can be filled at times other than above mentioned.

3. NEW TELEPHONE DIRECTORIES.

1. All organizations and Seperate units will, upon receipt of New Telephone Directories, immediately destroy all old copies of both Camp and the City Directories.

4. LIST OF ENLISTED MEN TO BE SUBMITTED TO CAMP PERSONNEL ADJUTANT.

1. Regimental and sepamate unit commanders will submit to the Camp Personnel Adjutant not later than 5:00 p. m. April 16, 1920, a list of all enlisted men attached to their respective organizations in the following form:-

ENLISTED MEN ATTACHED TO_____

Rank	Name	Ser.No.	Ord. Corps or Branch of Service	Enlisted under Sec. V. Bull.22 W.D.1918 (Yes or No.)	Eligible for Furl. to Reserve by June 30 1920. (If No, so state. (If Yes give date of eligibility.)

Vacancies for N.C.O. by grades:-

DAILY BULLETIN NO. 96.

Monday, May 10, 1920.

THE FOLLOWING IS PUBLISHED FOR THE INFORMATION AND GUIDANCE OF ALL CONCERNED. NOTE: Organization commanders will be held responsible for the compliance by all members of their commands with all orders published in this Bulletin.

1. CAUTION! FIRING ON ARTILLERY RANGE!

THERE WILL BE SUB-CALIBER FIRING WITH 37MM GUNS ON THE ARTILLERY RANGE COMMENCING AT 9:00 A. M. TO LAST UNTIL 4:30 P. M. FROM MONDAY MAY 10TH TO FRIDAY 14TH, INCLUSIVE. THE DIRECTION OF THE FIRE WILL BE FROM WEST TO EAST ABOUT PARALLEL WITH THE ANGRUM FERRY ROAD AND TO THE NORTH OF IT. ORGANIZATION COMMANDERS WILL CAUTION THEIR COMMANDS TO KEEP OUT OF THIS AREA ON THOSE DATES.

2. CAUTION! FIRING ON PISTOL RANGE!

1. THERE WILL BE FIRING ON THE PISTOL RANGE FROM 8:00 A.M. TO 5:00 P. M. EVERY DAY UNTIL MAY 19TH. THE DIRECTION OF THE FIRE WILL BE FROM WEST TO EAST. ORGANIZATION COMMANDERS WILL CAUTION THEIR COMMANDS TO KEEP OUT OF THIS AREA ON THOSE DATES.

3. PRESENTATION OF CUP.

1. There will be a review of the 48th Infantry held on the 48th Infantry Drill Grounds at 5:30 P. M. TUESDAY, MAY 11TH. This ceremony will be modified as prescribed for the presentation of medals and will be for the purpose of presenting to the Headquarters Company, 48th Infantry, the Cup for best barracks and Mess room.

2. It is desired that as many members of the command as practicable be present to witness the ceremony.

Write report called for in Par 5 Date report and result.

Saturday, May 22, 1920.

THE FOLLOWING IS PUBLISHED FOR THE INFORMATION AND GUIDANCE OF ALL CONCERNED. NOTE:- Organization commanders will be held responsible for the compliance by all members of their commands with all orders published in this Bulletin.

1. CAUTION! FIRING ON PISTOL RANGE! SUNDAY AFTERNOON.

1. The following men have been granted permission to practice pistol shooting on the Pistol Range, SUNDAY May 23, 1920 from 1:00 p. m.

Regt'l Sgt. Maj. C. Hundertmark, 48th Inf.
1st Sgt. Thomas Guillfoyle, Hdqrs. Co. 48th Inf.
Sgt. Arve B. Baker, Co. "G", 48th Inf.

2. The range officer will furnish the necessary ammunition and targets.

2. CAUTION! FIRING ON ARTILLERY RANGE! KEEP OUT OF THIS AREA!

1. THERE WILL BE SUB-CALIBER FIRING ON THE ARTILLERY RANGE WITH 37MM GUNS FROM 9:00 A. M. UNTIL 4:30 P. M. EVERY DAY FROM MONDAY MAY 24TH TO FRIDAY MAY 28TH. THE DIRECTION OF THE FIRE WILL BE FROM WEST TO EAST ABOUT PARALLEL WITH THE ANCRUM FERRY ROAD AND TO THE NORTH OF IT. ORGANIZATION COMMANDERS WILL CAUTION MEMBERS OF THEIR COMMANDS TO KEEP OUT OF THIS AREA ON THOSE DATES.

3. SCHOOL DUTIES MAY 24th & 25th.

1. School duties as outlined in Daily Bulletin No. 101, Paragraph 1, May 17, 1920, these Headquarters will be held on Monday and Tuesday, May 24th and 25th. The attendance of May 25th will be the last attendance of the year, excepting the Closing Exercises June 1st.

2. The Agricultural School and Animal Husbandry School will continue in operation.

COPY

HEADQUARTERS CAMP JACKSON
COLUMBIA, S. C.

June 29, 1920.

FROM: Commanding Officer.

TO: Commanding General, Southeastern Department, Charleston, S. C.

SUBJECT: Answers to Questionnaire.

1. In compliance with paragraph 2, letter No. 600. 9- (Posts, Camps, and stations, S. E. Department) Headquarters, Southeastern Department, dated June 5, 1920, the following answers to the Questionnaire from the War Plans Division, General Staff, dated May 10th, 1920, is submitted:

1. Location and Area.

(a) Location

Camp Jackson is located approximately six (6) miles due east of Columbia, S.C.

(b) Area

21,946.6 Acres, or 34.29 square miles.

2. General characteristics of the reservation and surrounding territory in so far as these affect the training of troops. For training of what class of troops is reservation suitable - Infantry, cavalry, field artillery, coast artillery, engineers, tanks, etc.

(a) The country is rolling and covered with woods and undergrowth broken by many open spaces. There are many good camp sites and ample room for practice marches and maneuvers without danger of destruction to valuable crops or trespass on valuable farm land. There is an abundant supply of water for animals throughout the country roundabout. The topsoil is heavy sand; the subsoil is clay. There is little mud even during a rainy season as the water either drains off rapidly or is absorbed by the sandy soil. It is possible to drill troops within half an hour after a rain of twelve or more hours duration. The sand is but little shifted about by light winds and dust storms are infrequent. There are no prevailing high winds and no long seasons of rain.

RG 393 Army Cont. Cmds, 1821-1920
Part II, Camp Jackson
Gen Corr, 1917-1920
Box 24

REPRODUCED AT THE NATIONAL ARCHIVES

(b) The country is well suited for training of field artillery, infantry, engineers, and signal corps troops, there being suitable ground for unlimited target practice for these branches. For mounted troops the ground is easily gotten over but would prove heavy for drill ground work. Motorized heavy artillery finds considerable difficulty in moving heavy guns about, the ten-gun Holt tractors not having enough power to haul the guns, such as the 155 G.P.F. and the 8" Howitzer, where the sand is heavy. The same applies to tanks; the ground is favorable for the light tank but not for the others.

At present there is nt enough cleared ground in the vicinity of the barracks for dismounted and mounted drill. This defect can be remedied by clearing ground in close proximinity to the camp proper.

3. Amount and character of construction, capacity for troop shelter, permanent and temporary, for officers, enlisted men and animals. Show the data called for in this paragraph relative to permanent Construction listed separately from that pertaining to temporary Construction:

CONSTRUCTION

(a) Temporary Southern Army Cantonment:

Kind.	No.
Officers'	106
Barracks	358
Infirmaries	21
Mess and Kitchens	25
Administration	28
Offices	3
Guard Houses	19
Stable Guard	20
Bathhouses and Latrines	369
Stables	164
Storehouses	63
Sheds	96
Shops	25
Garages	6
Fire Stations	6
Heating Plants	3
Post Exchanges	18
Hospital Section	87
Theatre	1
Oil Filling Station	1
Laundry	1
Schools	7
Bakery	1
Septic Tank	1
Hotels	8
Stockade	1
Watch Towers	10

REPRODUCED AT THE NATIONAL ARCHIVES

(b)	Capacity men and Officers		47,860	
	Tent space for		22,000	
		Total	69,860	
	Capacity for Animals:			
	Camp Proper		8,320	
	Remount Area (Originally)		10,000	(now converted into Vocational Farm)
		Total	18,320	
(c)	Permanent Construction:			
	Grain Elevator	1		
	Magazines	4		
(d)	Hospital Capacity:			
	Beds	2,500		
	Personnel:			
	Nurses	200		
	Officers	200		
	Enlisted men	900		

4. Climatic conditions affecting training (number of outdoor working days by month for calendar year).

The annual rainfall is 45.7 inches. The mean temperature 65.4; lowest 24. In summer the temperature is at times so high that strenuous outdoor work is impracticable, but during the winter it is never too cold for such work. There are no prevailing high winds and no prolonged rainy season. For this reason, with the exception of a very few days in mid-summer, outdoor work can be carried on the entire year. Counting Sundays and holidays as working days the following working days by month can by counted on:

January - 31
February - 25 - 3 days of rain.
March - 31
April - 30
May - 25
June - 20 - 5 days of rain - 5 days of excessive heat.
July - 20 - 5 days of rain - 6 days of excessive heat.
August - 20 - 5 days of rain - 6 days of excessive heat.
September - 25 days
October - 31
November - 30
December - 31.

5. Communication within, to and from the area, including roads, railroads, trolley lines, telegraph, telephone, and available landing fields for airservice.

REPRODUCED AT THE NATIONAL ARCHIVES

Communications, etc.:

1. (Within Post Proper) Roads: Class A. - Concrete - 2.78 miles. Class A - Bituminous Macadam - 8.26 miles. Class C - Sand Clay - 6.62 miles. Total Class A Roads 10.98 miles. Total Class C Roads 6.62 miles.

1. (a) Within Reservation - Class C Roads - Sand Clay - 21.6 miles (exclusive of Post roads).

2. Miles of Railroad Track - 0.2 miles (This track is used jointly by the Atlantic Coast Line, Seaboard Air Line and Southern Railroads, operating through spur from Atlantic Coast Line Railroad).

3. Telegraphic Communications - Western Union and Postal Telegraph.

4. Telephone - Bell Long Distance and local to Columbia, S.C.

5. Current - Lighting, etc. Current is furnished by City of Columbia, S. C., through a 23,000 volt, 3 Phase Line, stepped down through transformers in Camp.

6. Water Supply - From mains from City Pumping Station.

Camp Storage Capacity is as follows: Concrete Reservoir of 1,300,000 gallons, 3 tanks of 200,000 gallons and 1 small tank of 50,000 gallons, giving a total storage capacity of 1, 950,000 gallons.

7. Communication with the Camp is effected by one well paved bituminous and concrete road and one sand-clay road and a trolley line leading directly from Columbia, S.C., to points east, north and south within the camp. There are three railroads leading to camp as follows: Atlantic Coast Line, Seaboard Air Line, and Southern, operating through joint spur as stated above.

8. Aviation Facilities - There is an aviation field, not owned by the Government, approximately two miles south of Camp, three fourths square mile in area. In addition there are several landing places scattered through-out Camp, large enough to accommodate at least two airplanes.

9. Existing target ranges for both infantry and artillery with possibilities of adaptation to musketry training (field firing) for infantry and service firing for field artillery.

(a) For small arms practice a complete range equipped with 65 targets, capable of expansion to 100 targets at all ranges with ideal spots adapted to musketry training. During the War there were 500 targets. Suitable ranges for the maximum number of troops that can be accommodated can be provided.

REPRODUCED AT THE NATIONAL ARCHIVES

(b) The Artillery range adjacent to and joining the Camp proper is approximately nine and one-half miles long and three and one-half miles wide, and affords facilities for every phase of artillery practice.

7. Additional tracts suitable for target ranges, infantry and field artillery, and their characteristics. Possibility of acquisition (a) for ordinary peace time training; (b) in an emergency requiring sudden expansion of peace time facilities. Distance from post and communications.

North of the Camden Road, immediately adjoining the present range and parallel thereto, is a large stretch of land similar in every respect to the present range, both as to size and characteristics, and suitable for infantry and field artillery target ranges.

POSSIBILITY OF ACQUISITION:

(a) For ordinary peace time training, -can be obtained only at exhorbitant cost.

(b) In an emergency requiring sudden expansion of peace time facilities - Can be obtained by lease, purchase of condemnation.

Distance from post and communications. - Tract is immediately adjoining present reservation on the North. Main road is the Camden Road running along the South side of the tract. This is an improved road at present in poor condition. Other roads throughout tract are merely trails, or unimproved roads.

8. Visitors Accommodations on reservation or in the immediate vicinity.

There are two large Y.W.C.A. houses in camp with limited facilities for the accomodation of visitors. There are also ten Y.M.C.A., two K. C., one Christian Science, and one Jewish Welfare buildings, with no sleeping quarters. There is one first class hotel in the City of Columbia, S. C., six miles distant and several second class hotels. All are expensive, generally crowded, and the service is poor. Accommodations with private families in Columbia are expensive and difficult to obtain.

9. Facilities for quartering families of troops on or near the reservation.

A number of families of Officers and enlisted men are at present occupying some of the temporary buildings not required for the use of the troops. Should these ever be required for troops there will be no accommodations in camp for families of troops.

REPRODUCED AT THE NATIONAL ARCHIVES

There are no other accommodations on the reservation, and in the city of Columbia accommodations are scarce and extremely expensive when obtainable.

10. Recreational facilities on or near the Reservation.

On the reservation there is one athletic field including a baseball diamond, one baseball field, one polo field, one large building, formerly belonging to the Y.M.C.A., suitable for a gymnasium, equipped with bowling alleys, but nothing else, and one Liberty Theatre, capacity 2200, in which moving pictures are shown and road shows presented. Six Service Clubs for enlisted men are in operation, and there is one Library.

Near the Reservation there is only the City of Columbia where the usual moving picture shows are in operation, and one public swimming pool on the outskirts of the city. The Y.W.C.A., the Y.M.C.A., the Knights of Columbus, and other fraternal organizations welcome enlisted men to their halls.

11. Formal capacity for training Purposes:

(a) Of Reservation Proper:
Officers and men in barracks - 47,860

Tent Space for	22,000
Total	69860

(b) Including adjacent ground now available for training purposes without cost to the Government.
None

12. Expansion Capacity:

(a) Including (11) above.

It is assumed that this question was intended to read, "Including (a) above". On this assumption, the numbers given in (a) above are considered to be the maximum capacity, viz., 69,860.

(b) Including ground in addition to (b) above that may be leased, purchased or condemned in the event of an emergency, using the ground formerly known as North Camp Jackson, just North and practically adjoining the Northwestern corner of the present reservation, which could be obtained through lease, purchase, and condemnation, in the event of an emergency the capacity could be expanded to 100,000 officers and men. Furthermore this tract lies adjacent to the main line of the Seaboard Air Line Railway.

13. A copy of each existing map of the reservation.
There are being forwarded under separate cover one blue print copy of each of twenty-four existing maps of the reservation.

REPRODUCED AT THE NATIONAL ARCHIVE

14. Any other information concerning the reservation which would be of interest in estimating its value as a training rendezvous for:

(a) The existing military establishment. Camp Jackson has ample facilities for housing and training at present 40,000 troops. Columbia, S. C., a town of 41,000, six miles distant, and connected with the Camp by a railroad spur, street car line, one macadam road in good condition, and one fair sand-clay road, is the junction point for three main southern railroads, viz., the Seaboard Air Line, the Atlantic Coast Line, and the Southern Railway. Training can be carried on outdoors practically the entire year round, due to the comparatively mild winter, and the absence of a prolonged rainy season. A noted winter resort, Camden, S. C., is thirty miles from Camp. Charleston, S. C., one of the most important ports of the South is only 128 miles distant.

Considerable repair work on the buildings would be necessary, however, for the carrying out of this project. Also, there would be no accommodation in camp for the families of officer and enlisted men with this number of troops, and the cost of rental of civilian quarters near the reservation would become prohibitive.

(b) A system of universal military training:

Owing to the number of railroads entering Columbia, S. C., and the excellent communication between the camp and the city, Camp Jackson with its present facilities would lend itself excellently to forming a part of such a training system.

(c) A mobilization and training of full man power of the nation (7,000,000 men program).

Owing to its location with reference to the three lines referred to, paragraph 14 (a) above, the ports of Charleston, S.C., and Savannah, Ga., and the possibilities of expansion of the present reservation, Camp Jackson, S.C., would form an important unit in the training and mobilization of the full man power of the nation. The possibilities of expansion are practically limited only by the capacity of the railroads for transportation of troops, material and supplies. The tracts referred to in preceding paragraphs as being available for are for the greater part uncultivated land and of small actual value, though held at a high price by the owners when the Government is in the market.

HARRY R. LEE,
COLONEL, INFANTRY,
Commanding.

RECORD

RECORD

RECORD

JUL 17 1923

HEADQUARTERS EIGHTY-SECOND DIVISION
ORGANIZED RESERVES

OFFICE OF THE EXECUTIVE OFFICER
COAST ARTILLERY RESERVE COMPANIES

COLUMBIA, S. C.

684 - Camp Jackson, S. C.

Subject: Rifle Range.

To: C.O. IV Coast Artillery District.

1. It is recommended that a rifle Range for the use of Civilian Rifle Clubs and the instruction of citizens of military age, as outlined in paragraphs 1 and 2, Special Regulations No.109, W.D. 1920, be opened on the Military reservation at Camp Jackson, South Carolina.

2. If this range is opened I am willing to be appointed instructor in Rifle Marksmanship in addition to my other duties. This would include the care and responsibility for the government property involved. One enlisted assistant would be required.

3. It is recommended that this range be divided into two parts: viz, a small bore range and a service range. The small bore range should be constructed near the camp entrance and in close proximity to the car line. There is a suitable location available. This range could be constructed at a very reasonable cost.(About $100.00) There is a suitable range already constructed for service firing and a small expenditure would make this serviceable. This range is not easily accessable except by automobile. hence would not be used for small bore firing.

4. An initial issue of the following material would provide a working equipment; viz, 5 service rifles; 5 .22 caliber New Model Springfield Rifles; 1 Service Ramrod; 2 Ramrods for .22 caliber rifles; 5000 patches; 5000 rounds service ammunition; 25,000 rounds .22 long rifle cartridges; 1000 gallery targets; 200 targets A; 20,000 white pasters; 15,000 black pasters; cleaning material, preferable Hoppe's Nitro powder solvent; 200 yards of target cloth; suitable paste and gun oil. Considerable salvaged material could be used in this work.

5. In my opinion a large number of reserve officers would avail themselves of an opportunity to take this rifle instruction. There is a growing rifle club in Columbia that would expand to a considerable size. A general enthusiasm for shooting would be fostered and the army would secure much favorable comment as the result of such a range being established.

A.G.O., Columbia, S.C., August 1, 1923. To: Headquarters 4th Corps Area, The Corps Area Commander, Atlanta, Ga.

1. Returned, approved. I concur in the above indorsement.

2. The rifle range at Camp Jackson will be repaired in the near future and it will be the pleasure of the State of South Carolina to encourage and assist in every way possible and the use of the rifle range will be open at any specified time to the Civilian Club.

Robert U. Craig,
The Adjutant General.

HEADQUARTERS I ARMY CORPS
~~HEADQUARTERS I CORPS~~
614 OFFICE OF THE CORPS COMMANDER HOC/lw
COLUMBIA, S. C.

February 24, 1941.

Subject: Construction of Training Aids.

To : Commanding General, First Army, Governors Island, New York.

1. Reference letter Headquarters First Army, file and subject as above, dated February 10, 1941, delays in the completion of range facilities have somewhat interfered with the progress of training. These delays, which have not been serious, were occasioned at Fort Jackson by the purchase of land, the time element incident to drawing of plans and specifications, and the letting of contracts.

2. Progress of Construction.

a. Fort Bragg, North Carolina

(1) 300-target Range:
(a) 70 completed by February 9th.
(b) 70 additional to be completed by March 1st.
(c) All to be completed by April 1st.

(2) 6 antitank sub-caliber ranges complete.
(3) 2 antiaircraft miniature ranges complete
(4) Moving target ranges, ample in operation.
(5) Sunken antitank ranges:
(a) 1 complete by March 15th.
(b) 2 additional to be completed by April 15th
(6) Infantry combat ranges one-third (1/3) complet by March 10th.
(7) Pistol range--200 complete by March 1st.

b. Fort Jackson, South Carolina.
(1) New ranges at Fort Jackson, South Carolina, will be in use about April 1, 1941, consisting of the following:

(a) 400-target Known-Distance Range.
(b) 8 - 1000" Moving Antitank.
(c) 4 - 1000" Antiaircraft.
(d) 200 - 1000" Bobbing Target.
(e) 20 sets, 1000" landscape.
(f) 200 pistol targets.

HEADQUARTERS FORT JACKSON
Office of the Commanding General

Fort Jackson, S.C.
December 3, 1942.

GENERAL ORDERS)
NUMBER 63

POST RANGE REGULATIONS

1. General Order #39, this Headquarters, dated June 24, 1941 is rescinded.

2. General Information.

   a. The purpose of these regulations is to govern the use of firing ranges and to prescribe safety precautions to be observed in service firing.

   b. All firing on the Reservation will be EAST of TELEPHONE ROAD as follows:

      (1) LEESBURG AREA: Small Arms firing will be conducted on the Leesburg Rifle Range.

      (2) ARTILLERY AREA: Artillery firing will be conducted in the area EAST of TELEPHONE ROAD exclusive of the Leesburg area. Infantry combat and Anti-Tank Ranges in the Artillery Area will be under control of the Artillery Area.

   c. When firing is in progress, signals will be displayed as follows:

      (1) LEESBURG RANGE: Red streamers on poles in rear of firing lines on ranges C-H-R.

      (2) ARTILLERY AREA: Red streamer on Tower Wichks Hill-(13.4-13.7) or Tower on Hill (15.7-21.2) depending on whether ANCRUM FERRY ROAD or OLD CAMDEN ROAD is closed to traffic. Red flags will also be displayed in vicinity of all firing points.

   d. Persons entering the reservation EAST of TELEPHONE ROAD will inform themselves as to the firing scheduled or in progress. The current days firing will be posted on maps located as follows:

      (1) Artillery Range Central. (C.R. Ancrum-Ferry and Telephone Roads).

      (2) Leesburg Range Central.

      (3) Office of the Post Range Officer, Post Headquarters.

      (4) See par. 12.

3. Range Control.

   a. The Post Range Officer will control the Range and will coordinate all firing on the Fort Jackson Reservation.

      (1) LEESBURG RANGE:

         a. The Assistant Post Range Officer at Leesburg will represent the Post Range Officer, with direct charge of all firing on Small Arms Ranges in the Leesburg Area. An organization firing on the Small Arms Ranges will appoint a Range Officer who will contact the Assistant Post Range Officer to arrange for targets and other materials, also for posting Range Guards.

Authority NND 997030 By MD NARA Date 3/15/04

RG 337 Hq Army Ground Forces, E. 108 (U.S.), AGF - AFF Journals Box 31

(2) DIVISION ARTILLERY RANGE OFFICER.

a. The Divisions or similar units will detail one Field Artillery Officer as Assistant Range Officer for the period when the Artillery of the Division is firing on the Artillery Range. This officer will function as Assistant Post Range Officer with respect to Artillery firing of his Division. He will report to the Post Range Officer for instructions on the day when requests for Artillery Firing reach the Post Range Officer, and forty-eight (48) hours before each days firing.

4. Range Detachment.

a. A permanent detachment will operate under the orders of the Post Range Officer. The Range Detachment will operate the Post Range Communication System. It will establish sentinels, signs and road blocks as directed by the Range Officer and will keep range maps posted.

5. Governing Regulations.

a. The provisions of AR 750-10 will govern all firing. The provisions of appropriate Field Manuals will govern the firing of the particular weapon.

6. Range Telephone System:

a. Traffic diagram of the Range Telephone System is in the Office of the Post Range Officer.

b. Tapping of circuits on the Range Telephone System at other than installed terminal strips, or cutting or rearranging of any installed circuit, is forbidden.

c. Requests for special circuits will be submitted to Post Range Officer one (1) day in advance.

d. Damage to telephone cables or metallic circuits on Artillery Range will be reported to Artillery Range Central immediately; damage to installations on Leesburg Range to Leesburg Range Central.

e. Permanent pole lines of the range telephone system will not be used by troops.

f. All field wire will be disconnected at the conclusion of each day firing.

7. Assignment of Ranges.

a. The general assignment of the Small Arms Ranges and the Artillery Ranges will be announced by Post Headquarters.

(1) LEESBURG RANGE:

(a) The organization assigned the Leesburg Range will inform the Assistant Range Officer, Leesburg, of the calibers and ranges on which firing is to be conducted twenty-four (24) hours in advance, except in the case of 50 caliber Machine Gun, when forty-eight (48) hours notice will be required. (See Part II.)

(2) ARTILLERY AREA:

(a) In accordance with priorities prescribed by regulations and orders of these Headquarters, the Post Range Officer will assign firing areas, will prescribe the limitations on firing therein, the safety limits, and any other restrictions necessary for safety.

Authority NND 947630
By MD NARA Date 3/15/94

(b) When an organization has been assigned priority on the range, requests for firing areas approved by that Organization Headquarters will be acted on promptly in the order in which received, and the assignment made within twenty-four (24) hours after receipt of request. The Range Officer will approve requests as submitted, except where the limits of the requested area must be modified for safety reasons. In this event, the Range Officer will promptly confer with the organization Headquarters to arrange suitable modification.

(c) Units other than those normally assigned the Artillery Area, desiring to fire Special Problems will submit requests for firing areas to the Post Range Officer ten (10) days in advance of the proposed firing.

(d) 37-mm and 75-mm Anti-Tank Firing by units in areas involving both the Leesburg Area and the Artillery Area will be arranged by the Post Range Officer upon request.

(e) Sentinels for enclosing the danger area will be furnished by units conducting fire and will be posted by the Artillery Range Officer under the direction of the Post Range Officer.

8. Publication of Firing Memorandum:

a. A weekly Firing Memorandum is issued by Post Headquarters every Friday morning at 8:00 A.M. covering all firing for the succeeding week. Overlays will accompany requests for Artillery Ranges and will reach the Post Range Office in time to be checked and the information placed in the Firing Memorandum. It is necessary that this information be furnished the Post Range Officer. The Post Range Officer must know at all times what firing is being conducted, the position and danger areas.

b. The following form will be used to submit requests:

TO: POST RANGE OFFICER, HEADQUARTERS.

Request following Firing Memorandum:

(Signed by officer requesting Memorandum.)

(Submit only one copy)

FIRING MEMORANDUM NUMBER _____

RIGHT SECTOR LIMIT: GUN
LEFT SECTOR LIMIT: GUNS
MAXIMUM RANGE (YARDS)
DANGER LIMIT (YARDS)
RESPONSIBLE OFFICER
REMARKS

Authority NND 947030 By MD NARA Date 3/18/04

9. Duties of the Post Range Officer.

a. The Post Range Officer is responsible for the coordination of activities on the range and for the safety of the entire range.

b. When requests for firing positions are submitted, the Range Officer will adjust any conflicts as to areas, check safety provisions, and will issue a Firing Memorandum prescribing the safety limits for each position.

c. When request for an area is submitted, the Firing Memorandum will define the area assigned. The officer supervising the exercise will prescribe safety provisions for each position in compliance with paragraph 7, AR 750-10.

d. When required, in addition to the usual warning issue to personnel of the Post, announcement will be made in the daily papers.

e. The Post Range Officer is responsible for the posting of permanent signs on the reservation.

10. Duds:

a. The Post Ordnance Officer is charged with the destruction of "duds" on the Range.

b. "Duds" discovered on the Range will be marked by a stake and reported to the Post Range Officer. Reports will show type and caliber of each "dud" location by coordinates, and the name of any person familiar with its location. Artillery units conducting fire will report location of any suspected "duds" during the day's firing.

c. Officers in charge of Mortar Firing will police range for "duds" at the completion of firings and report the location of all duds to the Post Range Officer.

11. Permanent Installations:

a. Artillery firing will not be placed within 500 yards of permanent installations except dugouts.

b. All dugouts, except #5 dugout, are constructed to offer protection against caliber 105-mm and less. Dugout #5 offers protection against 37-mm and less.

c. Permanent roads, bridges and dams may be included in firing areas, but no adjustment will be made on such installations. Every precautions will be taken to prevent direct hits on such installations. Precautions will be taken to assure that firing will not endanger permanent telephone lines.

12. Danger Areas.

a. The size of the reservation and the nature of the terrain prevent the posting of guards to cover all approaches to danger areas. The danger areas will be marked by signs at points where sentinels are not posted. These signs will not be passed by personnel, except in the following cases:

(1) Personnel going to and from service firing on safe routes designated by the unit commander in charge of the firing.

(2) Officers and parties accompanied by an officer checking through the Range Central and signing the range book. In this case, the officer accepts responsibility for a complete knowledge of the danger areas and of all firing in progress.

Authority NND 947630 By MD NARA Date 3/15/04

13. Battery-Commander:

a. The Battery-Commander is responsible that:

(1) Safety precautions prescribed in AR 750-10 regarding handling of ammunition and service of the piece are complied with.

(2) A red flag is displayed in a conspicious place in the vicinity of the battery position during firing.

(3) That all personnel of the battery are properly instructed as to safety precautions in general, and in particular as to the location of adjacent gun positions and sector of fire.

(4) When the shell is fired other than with bore safe fuses, or fuses considered in the category of bore safe, all personnel within the danger limits are protected as prescribed in paragraph 14, AR 750-10.

(5) The Range Central is promptly notified on completion of firing.

(6) The area used will be policed at the end of practice.

14. Battery Executive:

a. The Battery Executive is responsible for safety of the personnel at the firing position, (AR 750-10). He will fire only when the safety officer indicates safe to fire.

15. Battery Safety Officer.

a. In all Artillery firing, the Battery Safety Officer will have no other duties. He will indicate safe to fire only when:

(1) The Range Officer indicates the range is clear.

(2) The Range visible to him is clear.

(3) The pieces are so laid as to fire inside the safety limits both for direction and for range as determined by the quadrant elevation corresponding to the maximum range designated in the Firing Memorandum.

PART II

SMALL ARMS RANGE, LEESBURG

16. General Information.

a. The duties of the Assistant Post Range Officer (SA) on the Leesburg Rifle Range, will be as follows:

(1) Maintain all ranges to insure proper operation.

(2) To furnish all target material the Table of Allowance provides.

(3) To turn over all camp property to Organization Range Officer, or Supply Officer.

(4) To see that the ranges are not abused and that all the Government property is taken care of and used properly.

(5) To ascertain that no changes are made in safety angles for any range.

(6) To allow no changes to be made by using troops in any of the ranges.

Authority NND 947630 By MD NARA Date 3/15/04

(7) To permit the unauthorized use of weapons, [illegible] in weapons and ammunition not authorized for use on that particular range.

(8) Maintain and supervise the use of the camp and range utilities.

17. Duties of Organization (SA) Range Officer.

a. To take over the Leesburg Range and camping facilities, including all the property and return same at end of firing period to the Assistant Range Officer (SA) in good serviceable condition.

b. To assist all targets, quarters and facilities to the using troops.

c. To furnish guards and transportation and posting the necessary guard to keep the danger area clear of personnel during the hours of firing.

d. To act as representative for the using troops in which case all requests made by using troops will be made to him only.

e. Report to Post Range Officer any facilities assigned and not being used.

18. Location of Ranges:

a. Ranges are designated as follows from the most westerly range (A) through east to the most northerly range (Z)

(A) 100 Machine Targets, 30 caliber only

(B) 30 Pistol Target, 45 Caliber

(C) 1 AA Range, 22 Caliber

(D) 1 AA Range, 22 Caliber

(E) 100 Pistol Targets, 45 Caliber

(FG) 100 Rifle 200 yds., 30 Caliber

(HI) 100 Rifle 300 yds., 30 Caliber

(JK) 100 Rifle 300 yds., 30 Caliber

(LM) 100 Rifle 200 yds., 30 Caliber

(N) 4 sets Anti-Tank, 30 Caliber only.

(O) Trench Mortar.

(P) 100 Machine Gun, 30 Caliber and 50 caliber.
(NOTE: .50 caliber to be used only by arrangement with Post Range Officer.)

(Q) 35 Targets Pistol, 45 Caliber.

(R) 100 Target plain 1000", 30 Caliber

(S) 1 set AA Targets, 22 Caliber only.

(T) 1 set AA targets, 22 Caliber only.

(U) 8 sets of Landscape, 30 Caliber only.

(V) 25 Pistol Targets, 45 Caliber.

(W) 6 sets of Landscape, 22 Caliber only.

(X) 25 Pistol targets, 45 caliber.

(Y) 4 sets Anti-Tank, 22 Caliber.

Authority NND 947630
By MD NARA Date 3/18/09

(Z) 4 sets Sub-Machine Gun targets, 45 Caliber.

b. Each range is distinctly marked by a large conspicuous, designating letter. Also the type of ammunition to be used.

19. Control and Safety Regulations:

a. Guards will be posted under the supervision of the Organization Range Officer, so as to provide safety during the hours of firing, unless otherwise requested.

b. When all guards are posted, red streamers will be raised on poles in rear of Ranges C-H and R. No firing will be started until these streamers are raised. All firing will cease when streamers are lowered. A change in these streamers will be preceded by a long blast on the siren located at the water tank connected to tower. With no streamer raised, the blast will indicate that the streamer is to be flown. A series of blast on the siren, after firing has begun will indicate that all ranges will cease firing immediately.

c. Each range will be operated under the senior officer in charge. Where pits are provided, the pits will be under the supervision of an officer. Range procedure will be followed as specified in training manuals, for the arm being fired.

d. Prior to firing, the officer in charge of a range will notify the pit officer who will order the streamer on the target line to be raised when the pit is clear. Thereafter, no person will be allowed to stray from the pits, or leave the pits except by the authorized tunnels. Pit details will be instructed to operate and travel under the shelter.

e. An overlay will be furnished by Post Range Officer from time to time as to the location of the range guards. As the situation warrants, the location of these guards will change.

f. It will be the duty of the using troops to furnish one (1) non-commissioned officer and the guard for the range, and the duty of the organization (SA) Range Officer to ascertain that they are properly posted and instructed.

g. Ranges have been constructed to conform to Army Regulations for safety. Ranges will be used only for the purpose for which they were constructed (see paragraph 1). Special problems may be fired by arrangement with the Post Range Officer.

h. On all Combat Ranges and other Ranges beyond hearing distance of the siren at the water tank, the officer in charge of firing will communicate with the Leesburg Range Office to determine whether the Range Guards are posted and whether the Range is clear. At most of the Ranges telephone communication is established with the Range Detachment. The officer in charge of firing will notify the Leesburg Range Detachment Officer when firing is concluded each day.

i. The Officer in charge of firing will be responsible that the Range he uses is properly policed, targets are properly pasted or replaced for the next day, and any repairs that cannot be made on the "spot" will be reported to the Range Detachment at the conclusion of the day's firing.

j. Combat Ranges 1-2-3-4-5-6 are designed for firing Infantry Squad and Platoon Problems with Caliber 30, ball ammunition. The safety limits are marked and the Officer in Charge of Firing will see that all firing is within the Safety Limits.

These ranges will not be used for Training Areas or "Dry Run Exercises" except by permission of the Post Range Officer.

No changes in the Range Installations will be made by troops using the ranges. No other than caliber 30 ammunition will be fired on Combat Ranges except by permission of the Post Range Officer.

Authority NND 947630 By MD NARA Date 3/15/94

20. Range Supplies and Property:

a. Ranges will be released to units when their authorized representatives have taken over the range property. This property will be maintained in good operating condition by the using unit. (Exception - broken targets, frames, etc., will be turned into the Post Range House for replacement.)

21. Communication:

a. Phones for ranges will be turned over with the range. Phones may be exchanged for repair at Post Range House.

22. Administration: - Camp Area.

a. Requests for use of the Camp Area on the Small Arms Range will be submitted to the Post Range Officer.

b. When the Camp Area is assigned to an organization, the Commanding Officer of that organization or an officer designated by him will contact the Assistant Range Officer at Leesburg and will sign for all property on Memo Receipt. Obtain from the Assistant Range Officer a proposed administrative order to the using troops covering the interior economy of the camp.

They will inspect the camp area noting any deficiencies.

c. Assignments in camp area, will be made by Commanding Officer of using troops, and administrative arrangement for the camp area, will be made under the control of the units using the area. Senior officer will command for coordination of installations.

d. Before departure, organization will:

(1) Fasten down sides of tents and loosen ropes.

(2) Stack all cots in mess halls for check.

(3) Scrub kitchen and mess halls.

(4) Clean ice box and leave open.

(5) Skim grease trap.

(6) Remove all garbage.

(7) Scrub bath house.

(8) Scrub latrines, sprinkle lime in pits, and leave covers closed.

(9) Burn out and clean all latrines.

(10) Police area.

(11) Clean incinerator and haul rubbish to dump.

(12) Return property to Assistant Range Officer and get Memo Receipt.

e. When the Post Exchange is in operation in the Camping Area the Senior Officer will issue orders regulating the hours and arranging for police and sanitary conditions. Post Exchange Officer should be informed of important changes or requests.

23. Facilities:

a. Each unit commander will notify the Organization Range Officer when he has facilities that are assigned to him and which he does not need.

Authority NND 947630 By MD NARA Date 3/18/94

b. All requests for additional facilities should be made to the Organization Range Officer.

c. Available targets and ranges will be assigned by the Organization Range Officer.

d. The following equipment and facilities for each company or similar unit are available:

(1) Mess hall and kitchen.
(2) Pyramidal tents.
(3) Cots, canvas, folding.
(4) One (1) bath house to three (3) mess buildings.
(5) One (1) latrine, pit type.
(6) Screens or pyramidal tents, for latrines and bath houses.
(7) Ice Box.

e. The following equipment must be furnished by using troops.

(1) Field range.
(2) Cooking utensils.
(3) Mess kits, complete.
(4) Bedding.
(5) Ligh Bulbs.

f. Water facilities are very limited. Arrangements must be made within organizations to conserve all that is possible and alternate the use of it between the kitchen and bath houses when necessary. No water will be used for sprinkling streets.

24. Sanitation. The Commanding Officer of troops is responsible for sanitation and will appoint the senior medical officer as medical inspector for the camp and range.

25. Range Regulations, Anti-Tank Range.

Request will be made to Post Range Officer in same manner as for Artillery Range.

a. For the present time, only the following will be fired.
75mm sand loaded and armour piercing.
37mm armour piercing, sand loaded, and sub-caliber.
50 caliber Machine Gun.

b. The motor car and target car will be operated by personnel of the Range Detachment and under no circumstances by units firing. The car operator will set the car in motion and then report to officer in charge of firing that the range is clear and ready to be fired on.

c. A flag pole is available on the firing line. A red streamer will be flown when the Range is being fired on. No firing will be permitted unless the red streamer is being flown. It will be the duty of the officer in charge of firing to cause the streamer to be hoisted and lowered. Before the car operator goes forward, the order cease firing and lower the flag will be given. Upon return from target car the operator will report to officer in charge that range is clear and ready to be fired on. The officer in charge will order the flag to be hoisted and command begin firing.

d. The officer in charge of firing will furnish transportation for car operator to go to and from the target car to eliminate so much lost time when adjustments are to be made on car and target.

e. There is a white post at each end of the firing line. Pieces that are to be fired will take up positions between these posts.

f. Pieces that are merely for tracking purposes may be placed on an extension of the firing line.

g. There are two white poles 800 yds out with pieces of target cloth attached to the top which are to be used as right and left [illegible] markers respectively.

Authority NND 947630
By MD NARA Date 3/15/94

h. The car is able to operate at two speeds, slow speed which is 5-15 miles per hour. Fast speed is from 5-25 miles per hour. The car operator will set the car at either speed the officer in charge of firing so desires. No other speed will be used except the above listed, without permission of the Post Range Officer.

26. Range Fires:

a. The control of fires resulting from firing on the range is the responsibility of the Officer in Charge of Firing.

When a fire on the range is observed the Officer in Charge of Firing on that range will immediately contact the Post Range Officer or his Assistant to determine the danger area.

If the fire is located inside a danger area the Range Officer or the Assistant Range Officer will stop all firing in that area. The Officer in Charge of Firing will then proceed to extinguish the fire.

b. Unit Commanders in the vicinity of the fire will give assistance when called upon to do so.

c. There are tools available for fighting range fires at the Leesburg Range Headquarters Detachment.

d. During extremely dry weather when the danger of Range Fires is imminent Officers in Charge of Firing will inspect the impact areas of their ranges for fires at the conclusion of each days firing.

27. This General Order will be included in Post Regulations at a later date.

By command of Brigadier General BEEBE:

A. T. MURPHEY
Colonel, F.A.
Adjutant.

REDESIGNATION OF UNITS.--1. Pursuant to instructions contained in letter AG 320.2 - Headquarters Fourth Service Command, Subject: "Consolidation and Redesignation of Detachments, Station Complement, Fourth Service Command", dated December 26, 1942, the following units of the Station Complement, this station, are redesignated as indicated, effective December 31, 1942.

Former Designation	New Designation
Service Detachment, Branch No. 1, Supply Division.	Section No. 1, Supply Detachment, Supply Division (with Chemical Warfare Service, Engineer, Ordnance, Quartermaster Corps and Signal Corps Sub-sections.)
*Service Detachment, Branch No. 2 Supply Division.	*Section No. 2, Supply Detachment, Supply Division.
*Service Detachment, DEML.	*Post Detachment.

2. The Arm or Service designation of enlisted personnel of Section No. 1, Supply Detachment, Supply Division, will be governed by the designation of the Section to which the individual is assigned to duty.

3. Final and initial rosters will be rendered on WD AGO Form No. 309 for the above redesignations, in compliance with Paragraphs 12 and 13, AR 345-900.

By command of Brigadier General REDHE:

A. T. MURPHEY,
Colonel, FA,
Adj.

* Negro personnel.

HEADQUARTERS FOURTH SERVICE COMMAND, Atlanta, Georgia; December 10, 1942
TO: Commanding General, Army Ground Forces, Washington, D. C.

1. The proposed layout for the moving vehicle range is considered satisfactory but attention is called to the following:

a. If 50 calibre ammunition is to be fired on this range, the danger area should be increased 1,000 yards to 3,600 yards.

b. If possible, more safety should be provided between this proposed range and the existing combat range #2. This may be accomplished by swinging the line of fire on the combat range to the east and/or moving the proposed vehicle range back closer to State Highway # 262.

2. Comment is requested as to number of installations of the types specified considered necessary for Fort Jackson; and as to estimated cost, which this Headquarters considers excessive.

HEADQUARTERS ARMY GROUND FORCES, Army War College, Washington, D. C., To: Commanding General, Fourth Service Command, SOS, Atlanta, Georgia.

1. As long as sufficient land is available, it is not the policy of this headquarters to comment on the safety limits of ranges except insofar as it pertains to safety angles. It is believed that the depth of danger zones should be determined by the type of ammunition being used at the time.

2. It is considered necessary to have a total of the following type ranges at Fort Jackson in order to provide necessary training aids:

	Type	Number
a.	Live Grenade Courts	2
b.	Moving Vehicle Ranges	
	(1) MG (Page 100, FM 23-50)	1-(3 lanes)
	(2) Thompson Sub MG (Page 58, FM 23-40)	1
c.	Thompson Sub MG Range (dismounted)(Page 41, FM 23-40)	1-(12 firing points)

3. a. The construction of 2 a. above should be as simple as possible and should be independent of each other for operation.

b. Reference 2 b. (1) above, this range should provide three (3) adjacent lanes as indicated in FM reference. It is requested that this range be placed so that no other range lies within the area formed by drawing an angle of 45° to the outside of the two outside lanes. Obstacles on this range should be removable, so that firing may be conducted from either full track or wheeled vehicles.

c. Reference 2 b.(2) above and 2 c. above -- it is requested that the safety angle of 30° be used in this construction and that the twelve (12) firing points on the dismounted range be independent of each other.

4. There are no records available which would indicate the cost of the above construction but it is agreed that it should be as simple as possible.

Memorandum for Record:

Basic fr Fourth Serv Comd requests CG, Ft. Jackson to submit plans for 1 sub-MG range, 1 Moving Vehicle Range, 1 Grenade Court (live). States CG, Second Army has requested installation of same.

1st Ind fr Hq., Ft. Jackson, SC, AG 614-General, Nov. 20, 1942 to CG, 4th Serv Comd submits detailed plans for the ranges in question. However, requests 4 grenade courts instead of 1, 5 moving vehicle ranges instead of 1.

2d Ind fr Hq, Fourth Serv Comd, AG 614-General,(10-5-42) dated Nov. 23, 1942 to CG, Ft. Jackson returns correspondence to Ft. Jackson requesting that safety angles and danger areas be checked.

3d Ind fr Hq Ft Jackson, AG 614-General (10-5-42) dated Nov. 25, 1942 to CG, 4th Serv Comd., returned correspondence with the requested corrections. Also states that full danger area is not shown because advantage is taken of a high hill to receive projectiles.

4th Ind fr Hq Fourth Serv Comd AG 614-General (10-5-42) dated Nov.27,1942 to CG, Ft. Jackson states that in order to comply with AR 750-10 it is desirable that danger areas be based on the maximum ranges for ammunition used.

5th Ind fr Hq Ft. Jackson, AG 614-General (10-5-42) dated Nov. 28, 1942 to Lt. Col. Chas D. Riley, Range Officer and President, Bd of Officers orders danger areas be provided as recorded above.

6th Ind. fr Office of the Range Officer, Ft Jackson, AG 614-General (10-5-42) dated Dec. 7, 1942 to CG, Ft Jackson states that danger areas have been surveyed as shown on exhibit.

7th Ind fr Hq Ft Jackson, AG 614-General dated Dec 7, 1942 to CG, 4th Serv Comd states that 4th Indorsement was complied with.

8th Ind fr Hq 4th Serv Comd, AG 614-General (10-5-42) dated Dec. 10,1942 to CG, AGF states that proposed layout is satisfactory. Invites attention to the fact that if .50 caliber ammunition is to be fired on this range, the danger area should be increased by 1000 yards. Request comment as to the number of installations of the type specified is considered necessary for Ft Jackson and as to the estimate cost which the 4th Serv Comd considers excessive.

This action outlines the ranges that are considered necessary for the proper training of the units stationed at Ft Jackson, taking into consideration the fact that it is contemplated that a cav mechanized regt will always be stationed at this post and that the post will be used by two divs. In this answer to the 4th Serv Comd reference is made to safety angle desired by the AGF. This has the concurrence of Maj. Coyle, Misc. Br. who is rewriting AR 750-10. The grouping of the moving ~~target~~ ranges has the concurrence of Col. Ennis, Tng Br. The number of ~~moving targets~~ needed is concurred in by Lt. Col. Carnes, Tng Br. The other numbers of ranges concerned has had the necessary concurrence of Tng Br.

A COPY OF THIS GENERAL ORDER WILL BE INSERTED IN THE POST REGULATIONS AS APPENDIX "K".

HEADQUARTERS FORT JACKSON
Office of the Commanding General

Fort Jackson, S.C.
8 July 1943.

GENERAL ORDERS)
:
NUMBER 25) POST RANGE REGULATIONS

1. General Order #63, this Headquarters, dated December 3, 1942 is recinded.

2. General Information:

a. The purpose of these regulations is to govern the use of firing ranges and to prescribe safety precautions to be observed in service firing.

b. All firing on the Reservation will be EAST OF TELEPHONE ROAD as follows:

(1) SMALL ARMS FIRING will be conducted on the Known Distance Ranges at Leesburg and other ranges especially constructed or designated for Small Arms Firing.

The following weapons will classify as Small Arms:

Pistol	Cal 50 Machine Guns
Carbine	37mm Guns
Rifle	60 & 81mm Mortars
Cal 30 Machine Gun	

(2) ARTILLERY FIRING will be conducted in the area EAST OF TELEPHONE ROAD exclusive of the Small Arms Ranges.

(3) HAND GRENADES: Live Hand Grenades will be discharged on Courts especially constructed for that purpose in the Training Areas.

(4) LARGE SIZE CANNON: By arrangements with the Post Range Officer 8 inch Cannon, or larger, may be fired from positions West of Telephone Road but the Impact Area must be to the East of Telephone Road.

c. When firing is in progress, signals will be displayed as follows:

(1) LEESBURG RANGE: Red Streamers on poles in rear of firing lines on Ranges C-H-R.

(2) ARTILLERY AREA: Red streamer on Tower Wiehrs Hill - (13.4-13.7) or Tower on Hill (15.7-21.2) depending on whether ANCRUM FERRY ROAD or OLD CAMDEN ROAD is closed to traffic. Red flags will also be displayed in vicinity of all firing points.

d. Persons entering the reservation EAST of TELEPHONE ROAD will inform themselves as to the firing scheduled or in progress. The current days firing will be posted on maps located as follows:

(1) Artillery Range Central. (C.R. Ancrum Ferry and Telephone Roads.)
(2) Leesburg Range Central.
(3) Office of the Post Range Officer, Post Headquarters.
(4) See par. 12.

3. Range Control:

a. The Post Range Officer will control the Range and will coordinate all firing on the Fort Jackson Reservation.

Authority NND 947030 By MD NARA Date 3/15/04

RG 337, Hq Army Ground Forces, E 108 (U.S. Post Art Trng Sch.) Box 31

(1) SMALL ARMS RANGES:

a. The Assistant Post Range Officer at Leesburg will represent the Post Range Officer, with direct cha ge of all firing on Small Arms Ranges in the Leesburg Area. An organization firing on the Small Arms Ranges will appoint a Range Officer who will contact the Assistant Post Range Officer to arrange for targets and other materials, also for posting Range Guards.

(2) DIVISION ARTILLERY RANGE OFFICER:

a. The Divisions or similiar units will detail one Field Artillery Officer as Assistant Range Officer for the period when the Artillery of the Division is firing on the Artillery Range. This officer will function as Assistant Post Range Officer with respect to Artillery firing of his Division. He will report to the Post Range Officer for instructions on the day when request for Artillery Firing reach the Post Range Officer, and forty-eight (48) hours before each days firing.

4. Range Detachment:

a. A permanent detachment will operate under the orders of the Post Range Officer. The Range Detachment will operate the Post Range Communicatio System. It will establish sentinels, signs and road blocks as directed by the Range Officer and will keep range maps posted.

5. Governing Regulations:

a. The provisions of AR 750-10 will govern all firing. The provisions of appropriate Field Manuals will govern the firing of the particular weapon.

6. Range Telephone System:

a. Traffic diagram of the Range Telephone System is in the Office of the Post Range Officer.

b. Tapping of circuits on the Range Telephone System at other than installed terminal strips, or cutting or rearranging of any installed circuit, is forbidden.

c. Requests for special circuits will be submitted to Post Range Officer one (1) day in advance.

d. Damage to telephone cables or metallic circuits on Artillery Range will be reported to Artillery Range Central immediately; damage to installations on Leesburg Range to Leesburg Range Central.

e. Permanent pole lines of the range telephone system will not be used by troops.

f. All field wire will be disconnected at the conclusion of each day firin

7. Assignment of Ranges:

a. The general assignment of the Small Arms Ranges and the Artillery Ranges will be announced by Post Headquarters.

(1) SMALL ARMS RANGE

a. The organization assigned a Small Arms Range will inform the Assistant Range Officer, Leesburg, of the calibers and ranges on which firing is to be conducted twenty-four (24) hours before firing is to begin.

Authority NND 947030
By MD NARA Date 3/15/04

(2) ARTILLERY AREA:

(a) In accordance with priorities prescribed by regulations and orders of this Headquarters, the Post Range Officer will assign firing areas, will prescribe the limitations on firing therein, the safety limits, and any other restrictions necessary for safety.

(b) When an organization has been assigned priority on the range, requests for firing areas approved by that Organization Headquarters will be acted on promptly in the order in which received, and the assignment made within twenty four (24) hours after receipt of request. The Range Officer will approve requests as submitted, except when the limits of the requested area must be modified for safety reasons. In the event, the Range Officer will promptly confer with the organization Headquarters to arrange suitable modification.

(c) Units other than those normally assigned the Artillery Area, desiring to fire Special Problems will submit requests for firing areas to the Post Range Officer ten (10 days in advance of the proposed firing.

(d) Firing at Moving Targets by units in areas involving both the Leesburg Area and the Artillery Area will be arranged by the Post Range Officer upon request.

(e) Sentinels for enclosing the danger area will be furnished by units conducting fire and will be posted by the Artillery Range Officer under the direction of the Post Range Officer.

8. Publication of Firing Memorandum:

a. A weekly Firing Memorandum is issued by Post Headquarters each Friday morning at 0800 covering all firing for the succeeding week. Overlays will accompany requests for Artillery Ranges and will reach the Post Range Officer in time to be checked and the information placed in the Firing Memorandum. It is necessary that this information be furnished the Post Range Officer. The Post Range Officer must know at all times what firing is being conducted, the position and danger area.

b. The following form will be used to submit requests:

TO: POST RANGE OFFICER HEADQUARTERS _____

Request following Firing Memorandum:

(Signed by officer requesting Memorandum

Submit only one copy

FIRING MEMORANDUM NUMBER _____

DAY OF WEEK
DATE
HOURS OF FIRING
ORGANIZATION

AMMUNITION
TARGET AREA
OBSERVATION POST
GUN POSITION
RIGHT SECTOR LIMIT: GUN
LEFT SECTOR LIMIT: GUN
MAXIMUM RANGE (YARDS)

Authority NND 947030 By MD NARA Date 3/15/04

9. Duties of the Post Range Officer.

a. The Post Range Officer is responsible for the coordination of activities on the range and for the safety of the entire range.

b. When requests for firing positions are submitted, the Range Officer will adjust any conflicts as to areas, check safety provisions, and will issue a Firing Memorandum prescribing the safety limits for each position.

c. When request for an area is submitted, the Firing Memorandum will define the area assigned. The officer supervising the exercise will prescribe safety provisions for each position in compliance with paragraph 7, AR 750-10.

d. When required, in addition to the usual warning issued to personnel of the Post, announcement will be made in the daily papers, and Daily Bulletins.

e. The Post Range Officer is responsible for the posting of permanent signs on the Reservation.

10. Duds:

a. The Post Ordnance Officer is charged with the destruction of "duds" on the Range.

b. "Duds" discovered on the Range will be marked by a stake and reported to the Post Range Officer. Reports will show type and caliber of each "dud" location by coordinates, and the name, organization, and telephone number of any person familiar with its location. Artillery units conducting fire will report location of any suspected "duds" during the day's firing.

c. Officers in charge of Mortar Firing will police range for "duds" at the completion of firings and report the location of all duds to the Post Range Officer.

11. Permanent Installations:

a. Artillery firing will not be placed within 500 yards of permanent installations except dugouts.

b. All dugouts, except #5, are constructed against caliber 105-mm and less. Dugout #5 offers protection against 37mm and less.

c. Permanent roads, bridges, mockups and dams may be included in firing areas, but no adjustment will be made on such installations. Every precaution will be taken to prevent direct hits on such installations. Precautions will be taken to assure that firing will not endanger permanent telephone lines.

12. Danger Areas:

a. The size of the reservation and the nature of the terrain prevents the posting of guards to cover all approaches to danger areas. The danger areas will be marked by signs at points where sentinels are not posted. These signs will not be passed by personnel, except in the following cases:

(1) Personnel going to and from service firing on safe routes designated by the unit commander in charge of the firing.

(2) Officers and parties accompanied by an officer checking through the Range Central and signing the range book. In this case, the officer accepts responsibility for a complete knowledge of the danger areas and of all firing in progress.

Authority NND 947030
By MD NARA Date 3/18/09

(1) Safety precautions prescribed in AR 750-10, regarding handling of ammunition and service of the piece are complied with.

(2) A red flag is displayed in a conspicious place in the vicinity of the battery position during firing.

(3) That all personnel of the battery are properly instructed as to safety precautions in general, and in particular as to the location of adjacent gun positions and sector of fire.

(4) When the shell is fired other than with bore safe fuses, or fuses considered in the category of bore safe, all personnel within the danger limits are protected as prescribed in paragraph 14, AR 750-10.

(5) The Range Central is promptly notified on completion of firing.

(6) The area used will be policed at the end of practice.

14. Battery Executive:

a. The Battery Executive is responsible for safety of personnel at the firing position, (AR 750-10). He will fire only when the safety officer indicates safe to fire.

15. Battery Safety Officer.

a. In all Artillery firing, the Battery Safety Officer will have no other duties. He will indicate safe to fire only when:

(1) The Range Officer indicates the range is clear.

(2) The Range visible to him is clear.

(3) The pieces are so laid as to fire inside the safety limits both for direction and for range as determined by the quadrant elevation corresponding to the maximum range designated in the Firing Memorandum.

PART II

SMALL ARMS RANGE

16. General Information:

a. The duties of the assistant Post Range Officer (SA) on the Leesburg Rifle Range, will be as follows:

(1) Maintain all ranges to insure proper operation.

(2) To furnish all target material the Table of Allowance provides.

(3) To turn over all camp property to Organization Range Officer, or Supply Officer.

(4) To see that the ranges are not abused and that all the Government property is taken care of and used properly.

(5) To ascertain that no changes are made in safety angles for any range.

(6) To allow no changes to be made by using troops in any of the ranges.

(7) To permit no unauthorized use of ranges, such as firing weapons and ammunition not authorized for use on that particular range.

(8) Maintain and supervise the use of the camp and range utilities.

Authority NND 947630
By MD NARA Date 3/18/04

17. Duties of Organization (SA) Range Officer.

a. To take over the assigned ranges and Camping Facilities, including all the property and return same at end of firing period to the Assistant Range Officer (SA) in good serviceable condition.

b. To assign all targets, quarters and facilities to the using troops.

c. To furnish guards and transportation for posting the necessary guard to keep the danger area clear of personnel during the hours of firing.

d. To act as representative for the using troops in which case all requests made by using troops will be made to him only.

e. Report to Post Range Officer any facilities assigned and not being used

18. SMALL ARMS RANGES:

a. Known Distance Ranges are designated as follows from the most westerly range (A) through east to the most northerly range (Y).

(A) 100 Machine Targets, 30 Caliber only.

(B) 30 Pistol Targets, 45 Caliber.

(C) 1 AA Range, 22 Caliber.

(D) 1 AA Range, 22 Caliber.

(E) 100 Pistol Targets, 45 Caliber.

(FG) 100 Rifle 200 yards, 30 Caliber

(HI) 100 Rifle 100-200 yards, and 300 yards, 30 Caliber.

(JK) 100 Rifle 100-200 yards, and 300 yards, 30 Caliber.

(LM) 100 Rifle 200 yard, 30 Caliber.

(N) 4 sets Anti-Tank, 30 Caliber only.

(P) 50 Rifle 100-200-300-500 yards, 30 Caliber.

(R) 100 Target plain 1000", 30 Caliber.

(S) 1 set AA Targets, 22 Caliber only.

(T) 1 set AA Targets, 22 Caliber only.

(U) 8 sets of Landscape, 30 caliber only.

(V) 25 Pistol Targets, 45 Caliber.

(W) 100 Machine Gun, 30 & 50 Caliber.

(X) 25 Pistol Targets, 45 Caliber.

(Y) 4 sets Anti-Tank, 22 Caliber.

b. Each range is distinctly marked by a large conspicious, designating letter. Also the type of ammunition to be used.

Archives NND 947030
By MD NARA Date 3/15/04

19. Control and Safety Regulations:

a. Guards will be posted under the supervision of the Organization Range Officer, so as to provide safety during the hours of firing, unless otherwise requested.

b. When all guards are posted, red streamers will be raised on poles in rear of Ranges C-H and R. No firing will be started until these streamers are raised. All firing will cease when streamers are lowered. A change in these streamers will be preceded by a long blast on the siren located at the water tank connected to tower. With no streamer raised, the blast will indicate that the streamer is to be flown. A series of blast on the siren, after firing has begun will indicate that all ranges will cease firing immediately.

c. Each range will be operated under the senior officer in charge. Where pits are provided, the pits will be under the supervision of an officer. Range procedure will be followed as specified in training manuals, for the arm being fired.

d. Prior to firing, the officer in charge of a range will notify the pit officer who will order the streamer on the target line to be raised when the pit is clear. Thereafter, no person will be allowed to stray from the pits, or leave the pits except by the authorized tunnels. Pit details will be instructed to operate and travel under the shelter.

e. An overlay will be furnished by Post Range Officer from time to time as to the location of the range guards. As the situation warrants, the location of these guards will change.

f. It will be the duty of the using troops to furnish one (1) non-commissioned officer and the guard for the range, and the duty of the organization (SA) Range Officer to ascertain that they are properly posted and instructed.

g. Ranges have been constructed to conform to Army Regulations for safety. Ranges will be used only for the purpose for which they were constructed (see paragraph 1). Special problems may be fired by arrangement with the Post Range Officer.

h. On all Combat Ranges and other Ranges beyond hearing distance of the siren at the water tank, the officer in charge of firing will communicate with the Leesburg Range Office to determine whether the Range Guards are posted and whether the range is clear. At most of the Ranges telephone communication is established with the Range Detachment. The officer in charge of firing will notify the Leesburg Range Detachment Officer when firing is concluded each day.

i. The Officer in charge of firing will be responsible that the Range he uses is properly policed, targets are properly posted or replaced for the next day, and any repairs that cannot be made on the "spot" will be reported to the Range Detachment at the conclusion of the day's firing.

j. Combat Ranges 1-2-3-4-5-6 are designed for firing Infantry Squad and Platoon Problems with Caliber .30, ball ammunition. The safety limits are marked and the Officer in Charge of Firing will see that all firing is within the Safety Limits.

These ranges will not be used for Training Areas or "Dry Run Exercises" except by permission of the Post Range Officer.

No changes in the Range Installations will be made by troops using the ranges. No other than caliber .30 ammunition will be fired on Combat Ranges except by permission of the Post Range Officer.

Authority NND 947030
By MD NARA Date 3/18/04

k. Woods Combat Course: The Officer in Charge of Firing will see that all possible precautions are taken to avoid accidents. Before giving the order to Commence Firing he will:

(1) Ascertain that the range guard is posted.

(2) That a Red Streamer is flying in the vicinity of the firing point.

(3) That only M-2 ammunition, or ammunition with a maximum range of 4000 yards is used.

(4) That all personnel operating the targets are in the pits and understanding the safety precautions.

(5) That all explosive charges placed to represent enemy fire and all "Booby Traps" are prepared and exploded under the supervision of an officer.

(6) That all troops are instructed in the safety angles of fire. The safety angle of fire is 35 degrees to the right and left of the long axis of the course.

(7) The right and left sides and the finishing end of the course are marked by a single strand of barb-wire.
The officer in charge of firing will see that all problems are conducted within this enclosure and that all troops who have completed an exercise have been moved to the Safety Zone before the beginning of an exercise.

(8) That all targets are repaired and that the Range is in operating condition at close of firing.

(9) That all personnel taking part in the exercise and all pit details wear the regulation steel helmet.

l. Infiltration Courses: The Officer in Charge of Firing will see that all possible precautions are taken to avoid accidents. Before giving the order to Commence Firing he will:

(1) Ascertain that the range guard is posted.

(2) That a Red Streamer is flying in the vicinity of the firing point.

(3) That Machine Guns have been properly laid and that the elevating and traversing stops are in their proper place to keep the fire at a minimum of 36 inches above the ground and within the bounds of the range.

(4) That only M-2 ammunition or ammunition with a maximum range of 4000 yards is used.

(5) That each gunner thoroughly understands the functions of the traversing and elevating safety stops.

(6) That an officer is on the control tower at all times during firing and that he has proper means for immediately communicating with the gunner.

(7) That all explosive charges placed to represent enemy fire, or "Booby Traps" be prepared and exploded under the supervision of an officer.

(8) That all personnel taking part in the exercise and all pit detail wear the regulation steel helmet.

m. Mock Village Course: The Officer in Charge of Firing will see that all possible precautions are taken to avoid accidents. Before giving the order to Commence Firing he will:

Authority NND 947030 By MD NARA Date 3/18/94

(1) Ascertain that the range guard is posted.

(2) That a Red Streamer is flying in the vicinity of the firing point.

(3) That only M-2 ammunition, or ammunition with a maximum range of 4000 yards is used.

(4) That all personnel operating the targets are in the pits and understand the safety precautions.

(5) That an officer is on the control tower at all times during firing and that he has proper means of communication with all the pits for which targets are operated.

(6) That all explosive charges placed to represent enemy fire and all "Booby Traps" are prepared and exploded under the supervision of an officer.

(7) That all troops are instructed in the safety angles of fire. The safety angle of fire is 90 degrees to the right and left of the center line of the street.

(8) That all targets are repaired and that the Range is in operating condition at close of firing.

(9) That all personnel taking part in the exercise and all pit details wear the regulation steel helmet.

n. Live Grenade Courts. The Officer in charge of Firing will:

(1) Take all possible precautions to insure the greatest amount of safety to personnel.

(2) See that all personnel not in trenches or behind masks are at least 250 yards from the impact area.

(3) That all personnel in the trenches and behind the mask wear the issue Steel Helmet.

(4) That a guard is posted to prevent anyone from approaching within 250 yards of the impact area.

(5) Designate an officer or Non-Commissioned Officer with the necessary assistants to check for "Duds."

(6) Upon completion of firing police the range and if any "Duds" are not exploded they will be marked and a guard posted over them until arrangements are completed for their destruction. (See par. 10)

(7) Before firing a Red Streamer will be displayed from a pole erected for that purpose in rear of the center mask. This streamer can be drawn from the [illegible] Officer. [illegible]

FM 23-30 - AR 750-10 - TM 9-1900- SNL-S-3.

o. Thompson Sub-Machine Gun Ranges, Dismounted: The officer in charge of firing will:

(1) Take all possible precautions to insure the greatest amount of safety to personnel.

(2) See that all personnel not participating in the firing remain in the area immediately in rear of the firing positions.

Authority NND 947630 By MD NARA Date 3/18/04

(3) That only the marked routes of approach to ranges are used in getting into ranges.
(These ranges are close by other ranges and if other than marked roads are used men may wander into the danger area.)

(4) These ranges have three firing points on each range. If adjacent firing points are being used they will be used simultaneously. Men will advance from positions "A" to position "B" at a signal from the officer in charge of firing.

No scoring will be permitted when there is a man firing on an adjacent firing point.

(5) At the close of firing for the day targets and target material will be removed and placed in desiginated target house, the range will be thoroughly policed, any repairs that cannot be made will be reported to Assistant Range Officer - (Telephone Tie Line 12.)

o. Thompson Sub-Machine Gun Range, Mounted: The Officer in charge of firing will:

(1) Take all possible precautions to insure the greatest amount of safety to personnel.

(2) See that all personnel not participating in the firing remain in the area immediately in rear of the firing positions.

(3) That only the marked routes of approach to ranges are used in getting into ranges.
(These ranges are close by other ranges and if other than marked roads are used men may wander into danger area.)

(4) Vehicles will drive in the direction indicated by markers when firing.

(5) No one will be permitted on the course after firing begins until the vehicle doing the firing has completed the course and all weapons have been unloaded.

(6) At the close of firing for the day, targets and target materials will be removed and placed in dosignated target house, the range will be thoroughly policed, any repairs that cannot be made will be reported to Assistant Range Officer - (Telephone Tie Line 12.)

q. Anti-Tank Range: Request will be made to Post Range Officer in same manner as for Artillery Range.

(1) For the present time, only the following will be fired.

75mm send loaded and armour piercing.
37mm armour piercing, sand loaded, and sub-cal.
50 caliber Machine Gun.

(2) The motor car and target car will be operated by personnel of the Range Detachment and under no circumstances by units firing. The Car Operator will set the car in motion and then report to officer in charge of firing that the range is clear and ready to be fired on.

(3) A flag pole is available on the firing line. A red streamer will be flown when the Range is being fired

Authority NND 947030 By MD NARA Date 3/18/04

on. No firing will be permitted unless the streamer is being flown. It will be the duty of the officer in charge of firing to cause the streamer to be hoisted and lowered. Before the car operator goes forward, the order cease firing and lower the flag will be given. Upon return from target car the operator will report to officer in charge that range is clear and ready to be fired on. The officer in charge will order the flag to be hoisted and command begin firing.

(4) The officer in charge of firing will furnish transportation for car operator to go to and from the target car to eliminate so much time when adjustments are to be made on car and target.

(5) There is a white post at each end of the firing line. Pieces that are to be fired will take up positions between these points.

(6) Pieces that are merely for tracking purposes may be placed on an extension of the firing line.

(7) There are two white poles 800 yards out with pieces of target cloth attached to the top which are to be used as right and left safety limits markers respectively.

(8) The car is able to operate at two speeds, slow speed which is 5-15 miles per hour. Fast speed is from 5-25 miles per hour. The car operator will set the car at either speed the officer in charge of firing so desires. No other speed will be used except the above listed, without permission of the Post Range Officer.

20. Range Supplies and Property:

a. Ranges will be released to units when their authorized representatives have taken over the range property. This property will be maintained in good operating condition by the using unit. (Exception - broken targets, frames, etc., will be turned into the Post Range House for replacement.)

21. Communication:

a. Phones for ranges will be turned over with the range. Phones may be exchanged for repair at Post Range House.

22. Administration: - Camp Area:

a. Requests for use of the Camp Area on the Small Arms Range will be submitted to the Post Range Officer.

b. When the Camp Area is assigned to an organization, the Commanding Officer of that organization or an officer designated by him will contact the Assistant Range Officer at Leesburg and will sign for all property on Memo Receipt. Obtain from the Assistant Range Officer a proposed administrative order to the using troops covering the interior economy of the camp.

c. Assignments in camp area, will be made by Commanding Officer of using troops, and administrative arrangement for the camp area. Senior officer will command for coordination of installations.

d. Before departure, organization will:

(1) Fasten down sides of tents and loosen ropes.

(2) Stack all cots in mess halls for check.

(3) Scrub kitchen and mess halls.

Authority NND 947030
By MD NARA Date 3/15/04

(4) Clean i_ b_ and leave op

(5) Skim grease trap.

(6) Remove all garbage.

(7) Scrub Bath house.

(8) Scrub latrines, sprinkle lime in pits, and leave covers closed.

(9) Burn out and clean all latrines.

(10) Police area.

(11) Clean incinerator and haul rubbish to dump.

(12) Return property to Assistant Range Officer and get Memo Receipt.

e. When the Post Exchange is in operation in the Camping Area the Senior Officer will issue orders regulating the hours and arranging for police and sanitary conditions. Post Exchange Officer should be informed of important changes or requests.

23. Facilities:

a. Each unit commander will notify the Organization Range Officer when he has facilities that are assigned to him and which he does not need.

b. All requests for additional facilities should be made to the Organization Range Officer.

c. Available targets and ranges will be assigned by the Organization Range Officer.

d. The following equipment and facilities for each company or similar unit are available:

(1) Mess hall and kitchen.
(2) Pyramidal tents.
(3) Cots, canvas, folding.
(4) One (1) bath house to three (3) mess buildings.
(5) One (1) latrine, pit type.
(6) Screens or pyramidal tents, for latrines and bath houses.
(7) Ice Box.

e. The following equipment must be furnished by using troops.

(1) Field range.
(2) Cooking utensils.
(3) Mess Kits, Complete
(4) Bedding.
(5) Light Bulbs.

f. Water facilities are very limited. Arrangements must be made within organizations to conserve all that is possible and alternate the use of it between the kitchen and bath houses when necessary. No water will be used for sprinkling streets.

24. Sanitation: The Commanding Officer of troops is responsible for sanitation and will appoint the senior medical officer as medical inspector for the camp and range.

25. Range Fires:

a. The control of fires resulting from firing on the range is the responsibility of the Officer in Charge of Firing.

When a fire on the range is observed the Officer in charge of firing on that range will immediately contact the Post Range Officer or his assistant to determine the danger area.

Authority NND 947030 By MD NARA Date 3/15/04

If the fire is located inside a danger area the Range Officer or the Assistant Range Officer will stop all firing in that area. The Officer in Charge of Firing will then proceed to extinguish the fire.

b. Unit Commanders in the vicinity of the fire will give assistance when called upon to do so.

c. There are tools available for fighting range fires at the Leesburg Range Headquarters Detachment.

d. During extremely dry weather when the danger of Range Fires is imminent Officers in Charge of Firing will inspect the impact areas of their ranges for fires at the conclusion of each day firing.

By command of Brig. Gen. BEEBE:

A. T. MURPHEY
Col, FA

ARMY SERVICE FORCES
Fourth Service Command
Fort Jackson, South Carolina

GENERAL ORDER)
NUMBER 18)

PART I

16 March 1944

POST RANGE REGULATIONS

1. General Order #25, this headquarters, dated 8 July 1943 and General Order #26, dated 20 July 1943, are rescinded.

2. GENERAL INFORMATION:

a. The purpose of these regulations is to govern the use of ranges and to prescribe safety precautions to be observed in service firing.

b. All firing on the reservation will be EAST OF TELEPHONE ROAD as follows:

(1) SMALL ARMS FIRING will be conducted on the Known Distance Ranges at Leesburg and other ranges especially constructed or designated for Small Arms Firing.

The following weapons will be classified as Small Arms:

Pistol	Cal 50 Machine Guns
Carbine	37mm Guns
Rifle	60 & 81mm Mortars
Cal 30 Machine Gun	

(2) ARTILLERY FIRING will be conducted in the area EAST OF TELEPHONE ROAD exclusive of the Small Arms Ranges.

(3) HAND GRENADES: Live hand grenades will be discharged on courts especially constructed for that purpose in the training areas.

(4) LARGE SIZE CANNON: By arrangements with the Post Range Officer, 8 inch Cannon, or larger, may be fired from positions West of Telephone Road, but the Impact Area must be to the East of Telephone Road.

c. When firing is in progress, signals will be displayed as follows:

(1) LEESBURG RANGE: Red streamers on poles in rear of firing lines on Ranges C-H-R.

(2) ARTILLERY AREA: Red streamer on Tower Wiehrs Hill (13.4-13.7) when firing on the southern part of artillery range.
Red streamers on North Tower (15.7-21.2) when firing on northern part of artillery range.

(3) ALL OTHER RANGES: Red streamer in vicinity of the firing points.

d. Persons entering the reservation EAST OF TELEPHONE ROAD will inform themselves as to the firing scheduled or in progress. The current days firing will be posted on maps located as follows:

(1) Artillery Range House. (C.R. Ancrum Ferry and Telephone Roads.)

(2) Leesburg Range Detachment.

Authority NND 947030 By MD NARA Date 3/15/04

RG 337, Hq. Army Ground Forces
E. 108 (U.D.) AGF - AFF Instrs.
Box 51

(3) Office of the Post Range Officer.

(4) See paragraph 12.

3. RANGE CONTROL:

a. The Post Range Officer will control the range and will coordinate all firing on the Fort Jackson reservation.

(1) SMALL ARMS RANGES:

(a) The Assistant Post Range Officer at Leesburg will represent the Post Range Officer, with direct charge of all firing on Small Arms Ranges in the Leesburg area. An organization firing on the Small Arms Ranges will appoint a Range Officer to arrange for targets and other materials, also for posting Range Guards.

(2) ARTILLERY RANGE:

(a) The Battalion or similar units will detail one officer as Assistant Range Officer for the period when the battalion is firing on the artillery range. This officer will function as Assistant Post Range Officer with respect to artillery firing of his battalion. He will report to the Post Range Officer for instructions twenty-four (24) hours before each days firing.

4. RANGE DETACHMENT:

a. A permanent detachment will operate under the orders of the Post Range Officer. The Range Detachment will operate the Post Range Communications System. It will establish signs and road blocks as directed by the Range Officer and will keep range maps posted.

5. GOVERNING REGULATIONS:

a. The provisions of AR 750-10 will govern all firing. The provisions of appropriate Field Manuals will govern the firing of the particular weapons.

6. RANGE TELEPHONE SYSTEM:

a. Traffic diagram of the Range Telephone System is in the office of the Post Range Officer.

b. Tapping of circuits on the Range Telephone System at other than installed terminal strips, or cutting or rearranging of any installed circuit, is forbidden.

c. Requests for special circuits will be submitted to Post Range Officer one (1) day in advance.

d. Damage to telephone cables or metallic circuits on artillery range will be reported to Artillery Range Central immediately; damage to installations on Leesburg Range to Leesburg Range Office.

e. Permanent pole lines of the Range Telephone System will not be used by troops.

f. All field wire will be disconnected at the conclusion of each day firing.

7. ASSIGNMENT OF RANGES:

a. The general assignment of the Small Arms Ranges and the artillery ranges will be announced by Post Headquarters.

Authority NND 947030
By MD NARA Date 3/15/04

(1) SMALL ARMS RANGES:

(a) Requests for ranges will be submitted to the Post Range Officer.

(b) The organization assigned a small arms range will inform the Assistant Range Officer, Leesburg, of the calibers and ranges on which firing is to be conducted twenty-four (24) hours before firing is to begin.

(c) If small arms ranges are to be used for any other purpose than that for which they were constructed, requests will show the type of firing to be conducted.

(2) ARTILLERY AREA:

(a) The Post Range Officer will assign firing areas, will prescribe the limitations on firing therein, the safety limits, and any other restrictions necessary for safety.

(b) Requests for artillery range will be submitted to the Post Range Officer and accompanied by an overlay giving the following information:

Organization
Date and day of week
Hours of firing
Caliber
Ammunition
Gun Position
Impact area
Safety limits
Observation posts.

(c) Units, other than those normally assigned the Artillery Area, desiring to fire special problems will submit requests for firing areas to the Post Range Officer ten (10) days in advance of the proposed firing.

(d) Sentinels for enclosing the danger area will be furnished by units conducting fire and will be posted by the unit Range Officer under the direction of the Post Range Officer.

8. PUBLICATION OF FIRING SCHEDULE:

A WEEKLY FIRING SCHEDULE IS ISSUED BY POST HEADQUARTERS EACH TUESDAY MORNING AT 0800 COVERING ALL FIRING FOR THE SUCCEEDING WEEK. ALL REQUESTS FOR FIRING MUST REACH THIS HEADQUARTERS BEFORE 0800 TUESDAY.

9. DUTIES OF THE POST RANGE OFFICER:

a. The Post Range Officer is responsible for the coordination of activities on the range and for the safety of the entire range.

b. When requests for firing positions are submitted, the Range Officer will adjust any conflicts as to areas, check safety provisions, and will issue a firing memorandum prescribing the safety limits for each position.

c. When request for an area is submitted, the firing memorandum will define the area assigned. The officer supervising the exercise will prescribe safety provisions for each position in compliance with AR 750-10.

d. When required, in addition to the usual warning issued to personnel of the Post, announcement will be made in the daily papers, and Daily Bulletin.

e. The Post Range Officer is responsible for the posting of permanent signs on the reservation.

Authority NND 947030 By MD NARA Date 3/18/04

10. DUDS:

a. The Post Ordnance Officer is charged with the destruction of "duds" on the range.

b. "Duds" discovered on the range will be marked by stakes and reported to the Post Range Officer. Reports will show type of caliber of each "dud" location by coordinates, and the name, organization, and telephone number of any person familiar with its location. Artillery units conducting fire will report location of any suspected"duds" during the days firing.

c. Officers in charge of Mortar Firing will police range for "duds" at the completion of firing and report the locaion of all "duds" to the Post Range Officer. Officer in charge will sign certificate of clearance at Range Detachment Office regardless of whether there were any duds.

11. PERMANENT INSTALLATIONS:

a. Artillery firing will not be placed within 500 yards of permanent installations except dugouts.

b. All dugouts, except #5, are constructed against caliber 105-mm and less. Dugout #5 offers protection against 37mm and less.

c. Permanent roads, bridges, mockups, dams, and cemeteries, may be included in firing areas, but no adjustment will be made on such installations. Every precaution will be taken to prevent direct hits on such installations. Precautions will be taken to insure that firing will not endanger permanent telephone lines.

12. DANGER AREAS:

a. The size of the reservation and the nature of the terrain prevents the posting of guards to cover all approaches to danger areas. The danger areas will be marked by signs at points where sentinels are not posted. These signs will not be passed by personnel, except in the following cases:

(1) Personnel going to and from service firing on safe routes designated by the unit commander in charge of the firing.

(2) Officers, and parties accompanied by an officer, checking through the Range House and signing the range book. In this case, the officer accepts responsibility for a complete knowledge of the danger areas and of all firing in progress.

13. UNIT COMMANDER:

a. The Unit Commander is responsible that:

(1) Safety precautions prescribed in AR 750-10, regarding handling of ammunition and service of the piece are complied with.

(2) A red flag is displayed in a conspicious place in the vicinity of the battery position during firing.

(3) That all personnel of the battery are properly instructed as to safety precautions in general, and in particular as to the location of adjacent gun positions and sector of fire.

(4) When the shell is fired other than with bore safe fuses, or fuses considered in the category of bore safe, all personnel within the danger limits are protected as prescribed in paragraph 10, AR 750-10.

Authority NND 947030
By MD NARA Date 3/18/04

(5) The Range Central is promptly notified on completion of firing.

(6) The area used will be policed at the end of practice and all excavations will be refilled.

(7) He will not fire until he has been informed by the Assistant Range Officer from his unit that the range is clear, and will cease firing when directed by the proper authority.

PART II

SMALL ARMS RANGE

14. GENERAL INFORMATION:

a. The duties of the assistant Post Range Officer (SA) on the Leesburg Rifle Range, will be as follows:

(1) Maintain all ranges to insure proper operation.

(2) To furnish all target material the Table of Allowance prescribes.

(3) To turn over camp property to Organization Range Officer or Supply Officer on memo receipt.

(4) To see that the ranges are not abused and that all Government property is taken care of and used properly.

(5) To ascertain that no changes are made in safety angles for any range.

(6) To allow no changes to be made by using troops in any of the ranges.

(7) To permit no unauthorized use of ranges, such as firing weapons and ammunition not authorized for use on that particular range.

(8) Maintain and supervise the use of the camp and range utilities.

15. DUTIES OF ORGANIZATION (SA) RANGE OFFICER:

a. To take over the assigned ranges and camp facilities, including all the property and return same at end of firing period to the Assistant Range Officer (SA) in good serviceable condition.

b. To assign all targets, quarters and facilities to the using troops.

c. To furnish guards and transportation for posting the necessary guard to keep the danger area clear of personnel during the hours of firing.

d. To act as representative for the using troops in which case all requests made by using troops will be made to him only.

e. Report to Post Range Officer any facilities assigned and not being used.

16. SMALL ARMS RANGES:

a. Known Distance Ranges are designated as follows from the most westerly range (A) through east to the most northerly range (Y).

(A) 100 Machine Targets, 30 Caliber only.

(B) 30 Pistol Targets, 45 Caliber.

(C) 1 AA Range, 22 Caliber.

(D) 1 AA Range, 22 Caliber.

(E) 100 Pistol Targets, 45 Caliber.

Authority NND 947030
By MD NARA Date 3/15/04

(FG) 100 Rifle, 200 yards, 30 Caliber.

(HI) 100 Rifle, 100-200 and 300 yards, 30 Caliber.

(JK) 100 Rifle, 100-200 and 300 yards, 30 Caliber.

(LM) 100 Rifle, 200 yard, 30 Caliber.

(N) 4 sets Anti-Tank, 30 Caliber only.

(P) 50 Rifle, 100-200-300-500 yards, 30 Caliber.

(Q) Mortar 60 & 81mm.

(R) 100 Targets plain 1000", 30 Caliber.

(S) 1 set AA Targets, 200 Caliber only.

(T) 1 set AA Targets, 22 Caliber only.

(U) 8 sets of Landscape, 22 & 30 Caliber only.

(V) 25 Pistol Targets, 45 Caliber.

(W) 100 Machine Gun, 30 & 50 Caliber.

(X) 25 Pistol Targets, 45 Caliber.

(Y) 4 sets Anti-Tank, 22 Caliber.

b. Each range is distinctly marked by a large conspicious, designating letter. Also the type of ammunition to be used.

17. CONTROL AND SAFETY REGULATIONS:

a. Guards will be posted under the supervision of the Organization Range Officer, so as to provide safety during the hours of firing, unless otherwise requested.

b. When all guards are posted, red streamers will be raised on poles in rear of Ranges C-H and R. No firing will begin until these streamers are raised. All firing will cease when streamers are lowered. A change in these streamers will be preceded by a long blast on the siren located at the water tank connected to tower. With no streamer raised, the blast will indicate that the streamer is to be flown. A series of blast on the siren, after firing has begun will indicate that all ranges will cease firing immediately.

c. Each range will be operated under the senior officer in charge. Where pits are provided, the pits will be under the supervision of an officer. Range procedure will be followed as specified in training manuals, for the arm being fired.

d. Prior to firing, the officer in charge of a range will notify the pit officer who will order the streamer in pit to be raised when the pit is clear. Thereafter, no person will be allowed to stray from the pits, or leave the pits except by the authorized tunnels. Pit details will be instructed to operate and travel under the shelter.

e. An overlay will be furnished by Post Range Officer from time to time as to the location of the range guards. As the situation warrants, the location of these guards will change.

f. It will be the duty of the using troops to furnish one (1) non-commissioned officer and the guard for the range, and the duty of the organization (SA) Range Officer to ascertain that they are properly posted and instructed.

g. Ranges have been constructed to conform to Army Regulations for safety. Ranges will be used only for the purpose for which they were constructed (see paragraph 1). Special problems may be fired by arrangement with the Post Range Officer.

Authority NND 947030 By MD NARA Date 3/15/04

h. On all Combat Ranges and other Ranges beyond hearing distance of the siren at the water tank, the officer in charge of firing will communicate with the Leesburg Range Office to determine whether the Range Guards are posted and whether the Range is clear. At most of the Ranges, telephone communication is established with the Range Detachment. The officer in charge of firing will notify the Leesburg Range Detachment Office when firing is concluded each day.

i. The officer in charge of firing will be responsible that the range he uses is properly policed, targets are properly posted and replaced for the next day, and any repairs that cannot be made on the "spot" will be reported to the Range Detachment at the conclusion of the day's firing.

j. Combat Ranges 1-2-3-4-5-6 are designed for firing Infantry Squad and Platoon Problems with Caliber .30, ball ammunition. The safety limits are marked and the officer in charge of firing will see that all firing is within the safety limits.

k. These ranges will not be used for training areas or "dry run exercises" except by permission of the Post Range Officer.

l. No changes in the range installations will be made by troops using the ranges. No other than caliber 30 ammunition will be fired on combat ranges except by permission of the Post Range Officer.

m. The officer in charge of firing will inspect all pits before firing begins and if any are found to be unsafe he will have the necessary corrections made.

18. CARBINE TRANSITION FIRING will be conducted on Combat Ranges 2 and 5. Before the firing begins the officer in charge of firing will inspect all pits and if any are found to be unsafe he will have the necessary corrections made.

19. WOODS COMBAT COURSE: The officer in charge of firing will see that all possible precautions are taken to avoid accidents. Before giving the order to commence firing he will:

a. Ascertain that the range guard is posted.

b. That a red streamer is flying in the vicinity of the firing point.

c. That only M-2 ammunition or ammunition with a maximum range of 4000 yards is used.

d. That all personnel operating the targets are in the pits and understand the safety precautions.

e. That all explosive charges placed to represent enemy fire and all "Booby Traps" are prepared and exploded under the supervision of an officer.

f. That all troops are instructed in the safety angles of fire. The safety angle of fire is 35 degrees to the right and left of the long axis of the course.

g. The right and left sides and the finishing end of the course are marked by a single strand of barb-wire.

The officer in charge of firing will see that all problems are conducted within this enclosure and that all troops who have completed an exercise have been moved to the safety zone before the beginning of an exercise.

h. That all targets are repaired and that the range is in operating condition at close of firing.

i. That all personnel taking part in the exercise and all pit details wear the regulation steel helmet.

Authority NND 947030 By MD NARA Date 3/15/04

j. The officer in charge of firing will inspect all pits before firing begins and if any are found to be unsafe he will have the necessary corrections made.

20. INFILTRATION COURSES: The officer in charge of firing will see that all possible precautions are taken to avoid accidents. Before giving the order to commence firing he will:

a. Ascertain that the range guard is posted.

b. That a red streamer is flying in the vicinity of the firing point.

c. That machine guns have been properly laid and that the elevating and traversing stops are in their proper place to keep the fire at a minimum of 36 inches above the ground and within the bounds of the range.

d. That only M-2 ball ammunition or ammunition with a maximum range of 4000 yards is used. See par. 45d, AR 775-10, for regulations governing tracer ammunition.

e. That each gunner thoroughly understands the functions of the traversing and elevating safety stops.

f. That an officer is on the control tower at all times during firing and that he has proper means for immediately communicating with the gunner.

g. That all explosive charges placed to represent enemy fire, or "Booby Traps" be prepared and exploded under the supervision of an officer.

h. That all personnel taking part in the exercise and all pit detail wear the regulation steel helmet.

21. MOCK VILLAGE COURSE: The officer in charge of firing will see that all possible precautions are taken to avoid accidents. Before giving the order to commence firing he will:

a. Ascertain that the range guard is posted.

b. That a red streamer is flying in the vicinity of the firing point.

c. That only M-2 ammunition or ammunition with a maximum range of 4000 yards is used.

d. That all personnel operating the targets are in the pits and understand the safety precautions.

e. That an officer is on the control tower at all times during firing and that he has proper means of communication with all the pits from which targets are operated.

f. That all explosive charges placed to represent enemy fire and all "Booby Traps" are prepared and exploded under the supervision of an officer.

g. That all troops are instructed in the safety angles of fire. The safety angle of fire is 90 degrees to the right and left of the center line of the street.

h. That all targets are repaired and that the range is in operating condition at close of firing.

i. That all personnel taking part in the exercise and all pit details wear the regulation steel helmet.

j. That all pits be inspected before firing begins and if any are found to be unsafe he will have the necessary corrections made.

[redacted]
Authority NND 947030
By MD NARA Date 3/15/04

22. LIVE GRENADE COURTS: The Officer in charge of firing will:

a. Take all possible precautions to insure the greatest amount of safety to personnel.

b. See that all personnel not in trenches or behind masks are at least 250 yards from the impact area.

c. That all personnel in the trenches or behind masks wear the issue steel helmet.

d. That a guard is posted to prevent anyone from approaching within 250 yards of the impact area.

e. Designate an officer or non-commissioned officer with the necessary assistants to check for "duds".

f. Upon completion of firing, police the range and if any "duds" are not exploded they will be marked and a guard posted over them until arrangements are completed for their destruction. (See par. 10).

g. Before firing, a red streamer will be displayed from a pole erected for that purpose in rear of the center mask. This streamer can be drawn from the Post Range Officer on memo receipt.

REFERENCES:
FM 23-30 - AR 750-10 - TM 9-1900 - SNL-S-3.

23. SUB-MACHINE GUN RANGES, DISMOUNTED: The officer in charge of firing will:

a. Take all possible precautions to insure the greatest amount of safety to personnel.

b. See that all personnel not participating in the firing remain in the area immediately in rear of the firing positions.

c. That only the marked routes of approach to ranges are used in getting into ranges. (These ranges are close by other ranges and if other than marked roads are used men may wander into the danger area.)

d. These ranges have three firing points on each range. If adjacent firing points are being used, they will be used simultaneously. Men will advance from positions "A" to position "B" at a signal from the officer in charge of firing.

No scoring will be permitted when there is a man firing on an adjacent firing point.

e. At the close of firing for the day, targets and target material will be removed and stored in designated target house, the range will be thoroughly policed and any repairs that cannot be made will be reported to Assistant Range Officer - (Telephone Tie Line 12.).

24. SUB-MACHINE GUN RANGE, MOVING VEHICLE: The officer in charge of firing will:

a. Take all possible precautions to insure the greatest amount of safety to personnel.

b. See that all personnel not participating in the firing remain in the area immediately in rear of the firing positions.

c. That only the marked routes of approach to ranges are used in getting into ranges. (These ranges are close by other ranges and if other than marked roads are used men may wander into danger area.)

d. Vehicles will drive in the direction indicated by markers when firing.

e. No one will be permitted on the course after firing begins until the vehicle carrying the firing has completed the course and all weapons have been unloaded.

Authority NND 947030
By MD NARA Date 3/15/04

At the close of firing for the day targets and target materials will be removed and placed in designated target house, the range will be thoroughly policed, any repairs that cannot be made will be reported to Assistant Range Officer - (Telephone Tie Line 12.).

25. ANTI-TANK RANGE: Request will be made to Post Range Officer in same manner as for artillery range.

a. For the present time, only the following will be fired.

75mm sand loaded and armour piercing.
37mm armour piercing, (without windshields), sand loaded, and sub cal.
50 caliber machine gun.

b. The motor car and target car will be operated by personnel of the Range Detachment and under no circumstances by units firing. The car operator will set the car in motion and then report to officer in charge of firing that the range is clear and ready to be fired on.

c. A flag pole is available on the firing line. A red streamer will be flown when the range is being fired on. No firing will be permitted unless the red streamer is being flown. It will be the duty of the officer in charge of firing to cause the streamer to be hoisted and lowered. Before the car operator goes forward, the order cease firing and lower the flag will be given. Upon return from target car, the operator will report to officer in charge that range is clear and ready to be fired on. The officer in charge will order the flag to be hoisted and command begin firing.

d. The officer in charge of firing will furnish transportation for car operator to go to and from the target when adjustments are to be made on car and target.

e. There is a white post at each end of the firing line. Pieces that are to be fired will take up positions between these points.

f. Pieces that are merely for tracking purposes may be placed on an extension of the firing line.

g. There are two white poles 800 yards out with pieces of target cloth attached to the top which are to be used as right and left safety limits markers respectively.

h. The car is able to operate at two speeds, slow speed which is 5-15 miles per hour. Fast speed is from 5-25 miles per hour. The car operator will set the car at either speed the officer in charge of firing so desires. No other speed will be used except the above listed, without permission of the Post Range Officer.

26. TRANSITION RANGES: Before commencing to fire, the officer in charge of firing will inspect all pits and if any are found to be unsafe he will have the necessary corrections made.

27. RANGE SUPPLIES AND PROPERTY:

Ranges will be released to units when their authorized representatives have taken over the range property. This property will be maintained in good operating condition by the using unit. (Exception - broken targets, frames, etc., will be turned into the Range House for replacement.)

28. COMMUNICATION:

Phones for ranges will be drawn from the Assistant Range Officer. Phones may be exchanged for repair at Range Detachment.

29. CAMP AREA:

a. Requests for use of the Camp Area on the Small Arms Ranges will be submitted to the Post Range Officer.

Authority NND 947630 By MD NARA Date 3/15/04

b. When the Camp Area is assigned to an organization, the Commanding Officer of that organization or an officer designated by him will contact the Assistant Range Officer at Leesburg and will sign for all property on memo receipt. Obtain from the Assistant Range Officer a proposed administrative order to the using troops covering the interior economy of the camp.

c. Assignments in camp area will be made by Commanding Officer of using troops, and administrative arrangement for the camp area. Senior officer will command for coordination of installations.

d. Before departure, organization will:

(1) Roll sides of tents and loosen ropes.

(2) Stack all cots in mess halls for check.

(3) Scrub kitchen and mess halls.

(4) Clean ice box and leave open.

(5) Clean electric refrigerator; leave closed and connected.

(6) Skim grease trap.

(7) Remove all garbage.

(8) Scrub bathhouse.

(9) Scrub latrines, sprinkle lime in pits, and leave covers closed.

(10) Police area.

(11) Clean incinerator and haul rubbish to dump.

(12) Return property to Assistant Range Officer and get memo receipt.

e. When the Post Exchange is in operation in the camping area, the senior officer will issue orders regulating the hours and arranging for police and sanitary conditions. Post Exchange Officer should be informed of important changes or requests.

30. FACILITIES:

a. The following equipment and facilities for each company or similar unit is available:

(1) Mess hall and kitchen.
(2) Pyramidal tents.
(3) Cots, canvas, folding.
(4) One (1) bathhouse to three (3) mess buildings.
(5) One (1) latrine, pit type.
(6) Ice box and electric refrigerator.

b. The following equipment must be furnished by using troops:

(1) Field range.
(2) Cooking utensils.
(3) Mess kits, complete.
(4) Bedding.
(5) O. D. Blankets.

c. Water facilities are very limited. Arrangements must be made within organizations to conserve all that is possible and alternate the use of it between the kitchen and bathhouses when necessary. No water will be used for sprinkling streets.

d. During freezing weather the commanding officer of troops occupying the camp area will take all precautions to protect exposed water pipes.

Authority NND 947030
By MD NARA Date 3/15/04

31. SANITATION: The commanding officer of troops is responsible for sanitation and will appoint the senior medical officer as medical inspector for the camp and range.

32. RANGE FIRES:

a. The control of fires resulting from firing on the range is the responsibility of the officer in charge of firing.

When a fire on the range is observed, the officer in charge of firing on that range will immediately contact the Post Range Officer or his Assistant to determine the danger area.

If the fire is located inside a danger area, the Range Officer or the Assistant Range Officer will stop all firing in that area. The officer in charge of firing will then proceed to extinguish the fire.

b. Unit commanders in the vicinity of the fire will give assistance when called upon to do so.

c. During extremely dry weather when the danger of range fires is imminent, officers in charge of firing will inspect the impact areas of their ranges at the conclusion of each days firing.

By command of Brigadier General RICHART:

JOSEPH P. O'HARA
Major, AUS
Adjutant

ANALYSIS OF FORT JACKSON, SOUTH CAROLINA

GENERAL DESCRIPTION AND USE

Fort Jackson is located in the central part of South Carolina, 5 miles east of the city of Columbia (population 62,396). The reservation comprises an area of 60,217 acres of which 51,344 acres are Government-owned. From June 1940 to October 1944, a total of 8 Infantry Divisions received training for primary missions at this post. During the year 1942 the training of four Infantry Divisions was prosecuted at one time. Besides acting as a training post for infantry divisions, Fort Jackson has also been used for the training of miscellaneous tactical groups and service battalions.

REGIONAL FACTORS

Other nearby centers of population are: Sumter, 45 miles distant, (population 15,874), and Orangeburg, 50 miles distant (population 10,521). The proximity of Fort Jackson to the city of Columbia is very advantageous from the viewpoint of social outlets. The climate is moderate. The health of the troops is protected from mosquitoes by adequate drainage within the housing area, principal recreation areas, and for a one-mile strip surrounding these areas. Beyond the limits of the controlled area, mosquito breeding grounds are extensive and require the application of standard measures of malaria control. The area surrounding Fort Jackson is primarily an agricultural community.

POST DEVELOPMENT

In the cantonment area, based upon 80 square feet per man, there is available space for 19,714 men in mobilization type barracks. There have been housed 43,690 men in hutments and 2,198 in theater of operations type barracks. There are no permanent quarters. It would be desirable in the postwar period to convert the present hand fired space heaters and hot water heaters to automatic firing. Present housing conditions with respect to fire prevention are satisfactory.

The water supply system is constructed of permanent materials and is considered satisfactory for postwar use. The supply is from a dam on Gill Creek, treated in a water filtration plant, and is adequate and dependable.

The sewage disposal facilities are constructed of permanent materials and are considered very satisfactory and suitable for postwar use. Complete treatment is provided and therefore no nuisance is created.

Cold Storage facilities are adequate for postwar use.

The electric power is furnished by the South Carolina Gas and Electric Company. Service is excellent and supply adequate. No standby supply is provided. The last monthly billing of energy use was .7719 cents per KWH.

R E S T R I C T E D

DECLASSIFIED
Authority 803038 NRD
By CB NARA Date 3-24-04

Fort Jackson, South Carolina

Rail service is furnished by the Atlantic Coast Lines, the Southern Railway and the Seaboard Air Lines over jointly operated tracks. Switching operations within the warehouse area are increased due to the fact that ten to twelve warehouses must be served by a single track. Three general supply depots are within 150 miles of the camp.

Highway access adequately serves Fort Jackson. The roads and drainage within the post are satisfactory for postwar use.

The total cost of Fort Jackson to the Government since July 1, 1940, including land and construction, has been approximately $31,078,000.

TRAINING FACILITIES

The general soil characteristic of the reservation is sand and sandy loam. Water is absorbed quickly and troops can drill a few minutes after a normal rainfall.

All training aids, except small arms ranges, are located within a maximum of thirty minutes' marching time of the housing area.

Small arms ranges are located sixteen miles from the housing area. A tent camp sufficient to accommodate 6,000 troops is located within an average marching time of thirty minutes of all small arms ranges. Troops using these ranges train progressively and usually remain at the tent camp until all small arms training is completed. No loss in training time is incurred by the location of the ranges.

The artillery ranges afford excellent ground observation of impact area in open ground. Maximum range is 18,000 yards.

The maneuver areas include well proportioned open and wooded areas and are very suitable for training. The wooded areas are accessible to all types of motor and tracked equipment.

Sufficient drill fields are located near small units and allow 60% of the troop strength to use the areas at any one time. A division review field is also available.

There are two air strips located on the reservation for the operation of L-2 (Artillery Liaison) Planes. Land is available for expansion of these strips. There are two Army airports in the vicinity. One is the Columbia Army Air Base, approximately 18 miles from the post having 3 - 5,000' runways evaluated for 30,000 pounds capacity operation, 40,000 pounds limited operation. The second airport is Congaree, approximately 10 miles from Fort Jackson, having 3 - 4,500' runways, evaluated for 40,000 pounds capacity operation, 74,000 pounds limited operation.

Engineering training is available for floating and fixed bridges.

DECLASSIFIED
Authority NND 803038
By CB NARA Date 8-24-04

Fort Jackson, South Carolina

Tank deployment training facilities are satisfactory.

CONCLUSION

From an engineering standpoint, Fort Jackson may be considered satisfactory for postwar retention except in the matter of housing. There is a discrepancy of 13,136 between the available space in mobilization type barracks and the proposed strength of 32,850. Based upon the assumptions given in the attached appendix, the cost of providing permanent quarters for the officer complement, quarters for the first three grades of W.C.S.'s, additional barracks, and remodeling the existing mobilization type barracks for postwar use would be in the neighborhood of $55,000,000.

NND 803038
Authority
By CB NARA Date 8-4-04

APPENDIX A

Assumptions on Basis of Which Estimated Costs Were Made

In the absence of determined policy as to types of construction to be used, ace allocation for different kinds of structures, method of housing married ficers and top-grade non-commissioned officers, etc., the following assumptions ve been used in preparing the housing costs given in the preceding conclusion:

(1) That Theater of Operations construction, hutments, and tents would be disposed of, that only permanent or mobilization-type construction would be retained, and that mobilization-type construction would be improved to supply facilities suitable for permanent occupancy.

(2) That all new construction with the exception of extensions or additions to existing mobilization-type construction would be of permanent construction.

(3) That station hospitals, being normally of mobilization-type construction or better, would not usually require more than nominal expenditure for conversion to permanent use. (Estimates do not include this conversion cost.)

(4) That officer strength at a given post is roughly 5% of the total complement assigned to the post.

(5) That all officers at regular army stations and all regular army cadre officers serving as trainers at other types of posts would be provided family housing.(This applies to married officers only.)

(6) That all trainee officers will be provided bachelors' officers quarters. (National Guard and Reserve Camps would have no family quarters.)

(7) That top three grades of non-commissioned officers to be housed in family quarters comprise 2.2% of the total complement assigned to the post.

(Above percentages are based roughly on the Table of Organization for an Infantry Division and check fairly closely with the actual conditions of housing at seven pre-war permanent posts.)

(8) That existing housing given in "War Department Owned, Sponsored, and Leased Facilities" would accommodate only 75% of rated capacity, since capacities given in this publication (30 June 1945) are based on 60 square feet per man, while allocation approved for planning is 80 square feet per enlisted man. (Costs of new permanent family housing takes into account existing permanent family housing as given in Historical Records.)

Authority 803038 NND
By CB NARA Date 3-14-04

Based on the above assumptions and on the best available information, the following rough approximations of unit costs of housing were used:

(1) For remodeling mobilization type barracks and other related buildings, including necessary minimum improvements of roads, utilities, etc. . . . . $. 300.00 per S.M.

(2) For new permanent housing, replacing Theater of Operations structures, tents, and hutments, and including a proportional share of other facilities (buildings, utilities, etc.). . . . $ 2,000.00 per S.M.

(3) For new permanent officers' family housing (field and company grades averaged), including roads, utilities and other necessary miscellaneous community facilities, such as schools, club, etc. . . . . $10,320.00 per Officer

(4) For new permanent apartment quarters for bachelor officers, including same as above . . . . . $ 3,000.00 per Officer

(5) For new permanent family quarters for Warrant officers and top-grade N.C.O.'s, including roads, utilities and other miscellaneous community facilities such as schools, club, etc.. . $14,770.00 per man

HEADQUARTERS
RANGE & TRAINING AIDS DIVISION
Fort Jackson, South Carolina

25 April 1947

SUBJECT: Construction of Ranges.

TO : Post Engineer, Fort Jackson, S.C.

1. Request the construction and rehabilitation of the following Ranges, to meet the training requirements set forth in the Military Training Program of Hq. Army Ground Forces, annex # 3 Sec. 2 Dated 1 Feb. 47, as follows.

2. Transition Range as in plan number OCE # 1600-200. This range is to consist of 6 #6 lanes, 4 #7 lanes, 1 #8 lane. The firing line is to be located at coordinates, 1008.40-1212.00, Map Ft. Jackson and Vicinity 1:25,000 compiled form reservation map Ft. Jackson, dated, 3 May 43.

3. Techinque of Fire Range, to be constructed in accordance with OCE plan # 1600-110, consisting of 4 panels, 5 targets per panel. The firing line to be located at coordinates, 1009.30-1214.60, Map Ft. Jackson and Vicinity S.C., 1:25,000 , Compiled from reservation map Ft. Jackson, dated, 3 May 43.

4. Field firing Range, to be constructed in accordance with OCE plan # 1600-140. Firing line to be located at coordinates 1009.35-1214.30. Map Fort Jackson and Vicinity S.C., 1:25,000, compiled from reservation map Ft. Jackson, dated 3 May 43.

5. Rehabilitation of existing hand grenade court located at coordinates 1008.35-1217.00. Map Fort Jackson and Vicinity S.C.,1:25,000, compiled from reservation map Fort Jackson, dated 3 May 43. Rehabilitation consists of replaceing sand bags, duck boards and other minor repairs.

6. Rifle Grenade Range, to be constructed in accordance with diagram, Figure 44, page 114, FM-23-30. To be located at coordinates, 1007.50-1216.50 Map Fort Jackson and Vicinity SC., 1:25,000, compiled from reservation map Ft. Jackson, dated, 3 May 43. Rocket Launcher Range can be combined in with the Rifle Grenade Range, with very little additional expense and materials.

7. It is necessary that the construction of these ranges be given top prority, as the 13 week Training cycle starts 5 May 47 and all ranges are used from the 5th. to the 8th. week of the Training cycle. Ranges must be completed prior to 23 June 47.

8. This request is based on the Training of approximately 10,000 troops.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3.22.04
Reproduced at the National Archives

(1) The range is in proper mechanical condition for firing.

(2) The ambulance and qualified aid men are present.

(3) Range guards have been oriented and posted properly.

(4) The range has been scheduled and notice of firing placed in the Daily Bulletin.

(5) No situations have arisen that would make firing contrary to safety precautions.

7. During Use of Range by Using Units:

a. Range Supplies and Equipment: The Post Range Officer will furnish all requisite range supplies for specific ranges upon request for range supplies from the using unit.

b. On-the-spot Maintenance: The Post Range Officer will be responsible for continuous maintenance, during firing, of target frames, target devices and communication lines.

8. After Use of Range by Using Units:

a. Final Clearance: The Post Range Officer will be responsible for issuance of a written clearance of the range upon request by the using unit. Prior to the issuance of this clearance, he will personally, or by a commissioned officer or non-commissioned officer representative, ascertain that:

(1) The range proper is in an acceptable state of police.

(2) The condition of range facilities is the same as when accepted by the using unit.

(3) All non-expendable range supplies and equipment are turned in by the using unit and that expendable range supplies in excess of those used by the using unit are also turned in.

(4) The using unit has checked for range fires and duds.

b. Necessary Repair: The Post Range Officer will be responsible for making all necessary repairs. He will also be responsible for proper notification of the Post Engineer or Post Signal Officer for repairs of such nature as to require their aid.

Section III
Responsibilities of Officer in Charge of Firing

9. Before Using Range:

a. The Officer in Charge of Firing will be responsible for having personal knowledge of, and having the operation of ranges in compliance with, pertinent provisions of:

AR 750-10

Pertinent Technical Manuals and Field Manuals.

Chapter III below.

He will also be responsible for the dissemination of, and compliance with, the information contained in the pertinent provisions of the above references for all supervisory personnel.

b. The Officer in charge of firing will be responsible for notifying the Post Range Officer in the event firing is cancelled for any reason.

DECLASSIFIED
Authority NND 997000
By CO NARA Date 3-22-04

(2) On The Firing Line:

(a) The organization of personnel on the firing line will be so arranged as to adapt the using unit to the course to be fired.

(b) The organization of personnel on the firing line will be so arranged as to make the most efficient use of the time allotted.

(c) An officer will be present on the firing line at all times.

(d) Safety precautions will be followed at all times, including the following:

1. Weapons will be pointed "down range".

2. Weapons will be cleared and placed in the "safe" firing position when not in operation.

3. "Cease firing" will be given at any time when a condition arises which in anyway precludes the continuation of safe firing.,

4. Firing, limited to designated firing lines or areas and between designated limiting points, will be observed at all times.

5. No one will move from the firing line in the direction of the impact area until all weapons have been cleared and placed in the "safe" firing position.

6. No firing will be conducted when the scarlet streamer is not displayed on the range pole.

7. In case of an accident, such as the bursting of a barrel, or permanent damage to the weapon, the weapon will be left in the position in which the accident occured and the Ordnance Officer, Ft Jackson, notified.

8. If any serious malfunction of Ordnance equipment occurs on the range, such equipment will be turned over promptly to the Ordnance Officer without effort to repair it.

(3) Pits (where applicable):

(a) Organization:

1. Scheduling personnel as target operators in pits should be so arranged as to not interfere, or to cause an unnecessary break in firing.

2. Personnel should be rotated as frequently as is consistent with the efficient operation of the range in the performance of duties as target operators in the pits.

(b) Safety:

1. Each pit will have a red flag, which flag is to be waved during firing, only when for some necessitous reason or emergency (except on the KD range), a target operator must have the firing line "cease fire" in order to emerge from pit.

DECLASSIFIED
Authority NND 947000
By NARA Date 3-22-04

2. No target operator (s) will emerge from a pit or expose himself to fire until specific orders have been issued on the firing line to "cease fire" and "clear all weapons" and specific approval given to the target operator (s) to expose themselves.

3. The red flag will be exhibited from a prominent position in a pit during the entire time a target operator is exposed.

(4) Impact Area: Firing will be halted in the event:

(a) A range fire is detected on the range at any time. In which event the following procedure will be used:

1. Notify the Range Officer to obtain clearance to enter the impact area.

2. If the range fire is limited and clearance has been received extinguish fire with personnel and facilities available.

3. If the fire is large and clearance has been obtained or if possibility of its becoming large exists:

a. Use personnel and facilities available in attempt to prevent spread of fire, and if possible, extinguish it entirely.

b. Notify Post Range Officer that assistance will be required.

(5) Miscellaneous: All immediate repairs necessary will be reported to the Range Officer for action.

11. After Use of Range: The Officer-charge-of-firing will be responsible, upon completion of firing to:

a. Check for all range fires detected on the range, using the same procedure as in par 10 a (4) above, in the event one is discovered.

b. Check for, and report duds (where applicable) as follows:

(1) Appoint a limited number of responsible, experienced, non-commissioned officers to conduct a search for duds.

(2) Leave the suspected dud undisturbed.

(3) Mark the location by a dud marker (Note: Dud markers, 10" red discs with DUD marked in white letters, placed on 6 foot pole, are located in all target houses).

(4) Report the exact location by coordinates to the Post Ammunition Officer (tel 24). If Post Ammunition Officer indicates that he will investigate immediately, leave someone nearby to guide him to the exact location.

c. Police the entire range site for trash.

d. Conduct a search of all personnel for live ammunition.

e. Turn in all supplies, drawn specifically for range firing, to same agencies drawn from (See par 9 c, above).

f. Execute the following certificate (issued with all Ammunition) for all HE ammunition expended:

c. Upon completion of the record practice or examination, score cards or a report from examining boards will be transferred to the Headquarters of the unit, where the order of classification will be published----------".

CHAPTER - III
Detailed Information and Responsibilities for Specific Ranges

SECTION I

Machine Gun Range #1

12. Description:

a. Location: (1007.7 - 1214.9) See Annex #1.

b. Telephone Numbers: Tie Line 14 Ring 1.

c. Number of Firing Points: 60

d. Type Weapon Fired: Machine Gun Cal..30, Light (M1919A4)
Machine Gun Cal..30, Heavy (M1917A1)

e. Course to be fired on range: A or B (modified to 500" range).

f. Distance from gun position to target: 500 inches.

g. Safety Limits: See Annex #1.

h. Danger Area: See Annex #1.

DECLASSIFIED
Authority NND 947020
By NARA Date 3-22-07

i. Range Guard Positions: None necessary.

j. Available Range Facilities:

(1) Control Tower

(2) Covered Latrine

(3) Dry Firing Line with 60 Targets

(4) Mess Hall

(5) Scoring and Critique Tables

(6) Supply House

(7) Target House

k. Type Target: 500 inch Machine Gun.

13. Responsibilities of Post Range Officer:

a. Continuous responsibilities: The Post Range Officer is responsible for the maintenance of all range facilities mentioned in par 12 j, above.

b. Before Use of Range by Using Unit: The Post Range Officer is responsible for supplying using units with 500 inch Machine Gun targets and target frames.

14. Responsibilities of Officer-in-charge-of-firing:

a. Before Use of Range: The Officer-in-charge-of-firing will be responsible that:

(1) Both he and his supervisory personnel are thoroughly familiar with pars 110-122, FM 23-55, and AR 750-10.

(2) All firers have completed, as a minimum requirement, all mechanical training, gun drill and marksmanship, required by SOP 27 Hq 5th Inf Div. Requests for waiver of this prerequisite instruction will be submitted to this Headquarters ATTN: GNJDT, one week prior to actual firing.

(3) Prior to Firing:

(a) An officer will check headspace of each gun and make the proper adjustment.

(b) A cleaning rod and dry patch is run through the bore of each gun.

b. During Use of The Range:

(1) Operation of The Range:

(a) Behind the firing line (Opposite side of firing line from impact area): The Officer-in-charge-of-firing will be responsible that before removing a machine gun from its firing position, or from the firing line, each gun will be inspected, by an officer to see that it is unloaded. As part of this inspection, a cleaning rod will be passed completely through the barrel of each gun.

DECLASSIFIED
Authority NND 947030
By CO NARA Date 3-22-04

(b) On The Firing Line:

1. The most efficient organization, for this range consists of a breakdown into 5 equal sized orders as outlined below:

1 Order	Gunner	Wet Line
1 Order	Asst Gunner	Wet Line
1 Order	Observer	Wet Line
1 Order	Gunner	Dry Line
1 Order	Asst Gunner	Dry Line

2. Safety Precautions: The Officer-in-charge-of-firing will be responsible for the accomplishment of the following safety precautions: Note: The "Safe firing position" referred to in par 10 a (2) (d) 2 "Safety Precautions" will be considered to have been attained for the machine gun when:

a. A cleaning rod has been passed completely through the barrel.

b. A clearing block has been placed in the receiver of the gun.

(c) A clearing block should be inserted in the receiver of each gun during the time it is not being used to fire an exercise.

(d) All decisions as to actions to be taken on stoppages will be made by an officer.

c. After Use of Range: The Officer-in-charge-of-firing will be responsible that all trash accumulated in the trash bin is burned in the metal receptacles provided for that purpose.

SECTION II

ROCKET LAUNCHER RANGE

15. Description:

a. Location: (1007.7 - 1216.4).

b. Telephone Number: Tie Line 15, Ring 3.

c. Number of Firing Points: 24

12 Practice Ammunition
12 Service Ammunition

d. Type of Weapon Fired: Rocket Launcher, 2.36 inch M9 and M9A1.

e. Distance from Gun Position to Target: 100 Yards.

f. Safety Limits: See Annex #1.

g. Danger Area: See Annex #1.

h. Range Gaurd Positions: None Necessary.

i. Available Range Facilities:

(1) Range House.

(2) Dry Firing Line with 12 Targets.

(3) Control Tower.

DECLASSIFIED
Authority NND 997030
By NARA Date 3-22-04

f. After use of the range: The officer-in-charge-of-firing will be responsible that all trash has been policed.

SECTION IV

TRANSITION RANGE

21. Description:

a. Location (1008.7-1212.3)

b. Telephone Number - Tie Line 11.

c. Number of firing lanes: 15.

6 Lanes (1 through 6) - Table VI.
4 Lanes (7 through 10) - Table VII.
1 Lane (11) - Table VIII.
4 Lanes (12 through 15) - Table IX.

d. Course to be fired:

Table VI and VII - Par 69d FM 23-5
Table VIII - Par 69d FM 23-5, C2
Table IX - as follows:

PHASE LINES	TARGETS SINGLE	DOUBLE	TRIPLE	RANGE (YARDS)	SHOTS	TARGET	POSITION	SLING
2 - 3	2	1	0	5-70	4	E	Off Hand	None
3 - 4	0	1	2	5-70	8	E	Hip	None
4 - Final	2	3	0	5-70	8	E	Off Hand	None

(1) A single silhouette represents an enemy rifleman. A double silhouette represents an enemy automatic rifle team. A triple silhouette represents a machine gun.

(2) Targets will be exposed in sequence upon signal from the coach. Time of exposure of targets is as follows: (a) Single silhouettes, 3 Seconds. (b) Double silhouettes, 4 seconds. (c) Triple silhouettes, 5 seconds.

(3) Phase lines are placed after the 4th, 12th and 20th targets to assist in the enforcement of safety precautions.

e. Scoring and satisfactory scores:

TABLE	SCORING PROCEDURE	SATISFACTORY SCORES
Table VI & VII	Par 69e, (1) & (2), FM 23-5.	VII - 8
Table VIII	Par 69e (3), FM 23-5, C2	4
Table IX	1 for each target hit	8

f. Type of weapon fired: Rifle Cal .30, M1.

g. Distance from firing position to target:

Table VI - 200, 300, and 500 yards.

Table VII - 250, 300, 350, 400, 450 & 500 yards.

Table VIII - 100 yards.

Table IX - 5-70 yards.

DECLASSIFIED
Authority NND 947000 By NARA Date 3-22-04

h. Safety Limits: See Annex #1

i. Danger Areas: See Annex #1

j. Range Guard Positions:

POSITION	DUTIES
1008.6-1211.2	- Block all traffic moving into transition range danger area.
1009.1-1213.4	- Block all traffic moving Southeast on Hartsville Guards Road and all other traffic seen moving into transition range danger area.
1009.6-1211.3	- Block all traffic moving North into the transition range danger area.
1013.3-1210.1	- Block all traffic moving North along Telephone Road.
1014.5-1217.6	- Block all traffic moving South along Telephone Road.

k. Available range facilities:

(1) 6 Control towers

(2) Latrines

(3) 3 Bleachers (Capacity 50 each).

(4) Target House

(5) Work Tables

(6) Communication Arrangement (See Annex #2).

22. Responsibilities of Post Range Officer:

a. Continuous responsibilities: The Post Range Officer is responsible for the maintenance of all range facilities mentioned in K above.

b. Before use of range by using unit: The Post Range Officer is responsible for supplying using units with a sufficient number of [illegible] silhouettes, including those colored Red [illegible] yard firing, and also a sufficient number of target staves for the entire period of firing.

23. Responsibilities of Post Signal Officer:

a. Before use of range by using unit: The Post Signal Officer (Tel 10) will be responsible, upon requests by Regimental S-3's to advise the units as to use of cable facilities and to restore inoperative cable facilities.

b. During use of range by using unit: The Post Signal Officer will be responsible, upon request of Regimental S-3's, for repairing broken wire communication facilities.

c. After use of range by using unit: The Post Signal Officer will be responsible, upon request by the Post Range Officer, to make any necessary repairs.

24. Responsibilities of Officer in Charge of Firing:

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

a. Before Use of Range: The Officer in Charge of firing will be responsible that:

(1) Both he and supervisory personnel are thoroughly familiar with pars 34, 69d, e, f, g, 189-191b FM 23-5, C1 and 2, and AR 750-10, and SOP 24A.

(2) All firers have fired the rifle qualification Course "B" and also have received instruction in range estimation, assuming firing position and assault fire, required per SOP 24A, Hq 5th Inf Div. Requests for waiver of this prerequisite instruction will be submitted to this Hq, ATTN: GNJDT, one week prior to actual firing.

(3) Range Guards are posted in positions listed in 21 j above.

(4) When pits are filled with water they are bailed out prior to firing and that every third pit has a bucket available for any subsequent seepage into the pits.

(5) The first pit detail is familiarized with its duties and have at least one "dry run" prior to actual firing.

b. During use of Range: The Officer in charge of firing will be responsible for the overall operation of the range to include:

(1) Behind the firing line (opposite side of firing line from impact area).

(a) Only weapons that have been unloaded, locked, and have had a cleaning rod run through the bore, will be permitted to be removed from any firing point or firing line.

(b) Movement in rear of firing points by personnel undergoing this course, will be at a walk with rifles held at "Port Arms".

(2) On the firing line:

(a) Procedure for firing: As outlined in SOP 24A.

(b) Organization of firing line: As outlined in SOP 24A.

(d) Safety:

1. The safe firing position referred to in par 10 a (2) (d) 2, "Safety precautions" will be considered to have been attained when:

a. Rifle is locked.

b. Ammunition completely removed from rifle.

c. Bolt to rear.

d. A cleaning rod has been run through the bore of the rifle.

2. Safety Precautions: For Table IX.

The firer will be instructed prior to firing that targets are not more than 3 feet in size, targets will be on same level as ground, targets to front, right or left front only.

DECLASSIFIED
Authority NND 947030
By CO NARA Date 3-22-04

The Coach Cadre will:

Stay immediately in rear of firer.
Regulate speed of movement of firer.
Keep target operator well in rear of firer.
Determine that firer has unloaded his weapon before moving back to starting point.

(d) Communication: The firing point on each firing lane will maintain contact with the pits in its own lane by the use of field telephones.

(3) Pits:

(a) Organization: Pit details subsequent to the 1st order will be thoroughly instructed in their duties and also in safety precautions to be observed before being assigned to pits.

(b) Communication: Each lane within each of the 4 tables, will have its own integral communication net by which control will be exercised, as follows:

TABLE VI: The center pit at each of the three ranges (200, 300, 500 yds) will have a terminal for telephone communication to the firing point.

Communication between any of the three pits located at one of the three ranges may be established by use of whistles signals. Suggested signals are as follows:

"Attention" 4 short blasts

"Targets Up" 1 long blast

"Targets Down" 2 long blasts

"All Clear" 2 short blasts

TABLE VII: Each pit at each of the six different ranges (200, 250, 300, 350, 400, &450 yds) will have a terminal for telephone communications to the firing point.

TABLE VIII: The pit will have a terminal for telephone communication to the firing point.

(c) Scoring: Scoring will be accomplished by pit detail as follows:

TABLE VI: Flutter and lower target when hit then score.

TABLE VII: Same as above.

TABLE VIII: Score after command "Targets Down" is given.

TABLE IX: Not applicable (See par 21d & e, for scoring).

(d) Safety: See par 10, (2), (a) 2 "Safety".

e. After use of Range: The officer in charge of firing will be responsible:

(1) That all trash accumulated in trash bins is burned.

(2) That new targets are fastened on all staves and then stored in target house for the use of the next unit.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-07

5. See that there are no burs on the rings of the grenade launcher, and that the rings are free from grit.

6. Inspect frequently the wing nut on the clamp of the launchers M1, M2, and M8 to insure that it is tight.

7. Never place a grenade on the launcher unless it is intended to fire it immediately. Never fire service ammunition or standard blank ammunition when grenade is on the launcher.

8. If the hand grenade with the grenade projection adapter should accidently become armed after the removal of the safety pin, unlock the weapon and fire immediately as the grenade will explode in 4 to 5 seconds. Care should be taken not to strike the lever after the safety pin is removed as such action may cause the lever to spring from the grenade and allow the fuze to function.

9. Do not drop a grenade after the safety pin has been removed.

10. In the event the rifle grenade cartridge M3 or carbine grenade cartridge M6 does not fire and there are no additional M3 or M6 cartridges available., lock the weapon, replace the grenade safety pin, and remove the grenade.

11. Do not recover or tamper with live grenades, once fired, that fail to fire.

c. After use of the Range:

(1) Execute a certificate for all HE ammunition expended (see par 11f for example of certificate).

(2) Police all trash

SECTION VIII

PISTOL RANGE

34 Description:

a. Location (1008.8-1214.9)

b. Telephone Number Tie Line 14 Ring 4

c. Number of Firing Points: 10

d. Type weapon fired: Automatic pistol, Cal..45 M1911 or M1911A1 Colt Revolver, cal..45 M1917.

e. Courses to be fired as prescribed in pars 87-90 FM 23-35

f. Distance from firing line to targets: 15 and 25 yards.

g. Safety Limits: See Annex #1.

h. Danger Area: See Annex #1.

i. Range guard positions: None.

j. Available Range facilities.

Target House
Latrine (to be used in conjunction with latrine on MG Range #2).
Pistol Butts

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

35. Responsibilities of Post Range Officer:

a. Continuous responsibilities: The Post Range Officer is responsible for the maintenance of all range facilities mentioned in 34 j above.

b. Before use of range by using unit: The Post Range Officer is responsible for supplying using units with sufficient numbers of E&L type targets.

36. Responsibilities of officer in charge of firing:

a. Before use of range: The Officer in charge of firing will be responsible that:

(1) Both he and his supervisory personnel are throughly familiar with pars 13, 24, 25, 91, 96 FM 23-35 and AR 750-10.

(2) All firers have completed as a minimum requirement, all mechanical training and marksmanship training listed in FM 23-35. Requests for waiver of this instruction will be submitted to this headquarters ATTN: GNJDT one week prior to actual firing.

(3) All pistols have had safety devices tested per par 25.

All revolvers have had safety devices tested per par 64.

b. During use of range:

(1) Behind the firing line (opposite side of firing line from impact areas).

(a). Only weapons that have been unloaded, locked and have had a cleaning rod run through the bore will be permitted to be removed from the firing line.

(b). All weapons will be carried at the "Raise Pistol" position.

(2) On the firing line:

(a). Procedure for firing: As outlined in pars 94e FM 23-35.

(b). Organization: As outlined in par 94a and d FM 23-35.

(c). Safety: For pistol cal .45 M1911 or 1911A1.

1. When units carrying the pistol are first formed the officer or noncommissioned officer in charge causes the men to execute "Inspection Pistol".

2. The safe firing position referred to in par 10a (2) (d) 2. "Safety precautions" will be considered to have been attained when the weapon is unloaded, the magazine has been removed and the slide has been locked in the rearmost position with the slide stop.

3. Execute unload every time the pistol is picked up for any purpose. Never trust memory. Consider every pistol as loaded until it has been proven otherwise.

4. Always unload the pistol if it is to be left where someone else may handle it.

5. Always point the pistol up when snapping it after examination. Keep the hammer fully down when the pistol is not loaded.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04

6. Never place the finger within the trigger guard until it is intended to fire or to snap for practice.

7. Never point the pistol at anyone.

8. Before loading the pistol, draw back the slide and look through the bore to see that it is free from obstruction.

9. On the range, do not insert a loaded magazine until the time for firing.

10. Never turn around at the firing point.

11. On the range, do not load the pistol with a cartridge in the chamber until immediate use is anticipated. If there is any delay, lock the pistol and only unlock it while extending the arm to fire. Do not lower the hammer on a loaded cartridge; the pistol is much safer cocked and locked.

12. In reducing a jam first remove the magazine.

13. To remove a cartridge not fired first remove the magazine and then extract the cartridge from the chamber by drawing back the slide.

For Revolver Cal..45:

14. The safe firing position referred to in par 10 a (2) (d) 2 "Safety precautions" will be considered to have been attained when the weapon is unloaded, the cylinder is opened and the safety has been placed in a safe position.

15. Execute unload every time the revolver is picked up for any purpose. Consider every revolver as loaded until proven otherwise.

16. Always unload the revolver if it is to be left where someone else may handle it.

17. Always point the revolver up when snapping it after examination. Keep the hammer fully down when the revolver is not loaded.

18. Never place the finger within the trigger guard until it is intended to fire or to snap for practice.

19. Never point the revolver at anyone. On the range do not snap for practice while standing back of the firing line.

20. Before loading, open the cylinder and look through the bore to see that it is free from obstruction.

21. Never turn around at the firing point.

23. On the range do not cock the revolver until immediate use is anticipated. If there is any delay, lower the hammer and recock it only when ready to fire.

24. If the revolver fails to fire, open the cylinder and unload if the hammer is down. If the hammer is cocked or partly cocked, a breakage has occurred. In this case hold the revolver at raise pistol and announce the fact to the officer in charge.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04

25. To remove a cartridge not fired, open the cylinder and eject, first lowering the hammer if cocked.

(d) After Use of Range: The Officer in Charge of Firing will be responsible that all trash has been policed.

SECTION IX

ARTILLERY RANGE

37. Description:

a. Location: Gun Position (Center of Gun Position):

"A" - (1014.0-1211.3)
"B" - (1015.3-1214.8)
"C" - (1011.2-1210.4)

Impact Area (Center): (1019 - 1214)

b. Telephone Number: (Weir Tower) Tie Line 10.

c. Type Weapon Fired: 105mm and 155m Howitzer.

d. Safety Limits: See Annex #8.

e. Danger Area: See Annex #8.

f. Range Guard Positions: (See Annex #8)

For Impact Area: All road guards on the numbered road guard positions will prevent entry into the impact area.

When firing from gun position "A" the following additional guards will be posted in addition to impact area road guards: RG-A (1013.0-1210.0) allow only authorized traffic to proceed North along Telephone Road.

When firing from gun position "C" the following additional guard will be posted in addition to impact area road guards: RG-C (1011.2-1209.5) allow only authorized traffic to proceed North along Telephone Road.

When firing from gun position "B": Only impact area road guards will be posted.

38. Responsibilities of Officer in Charge of Firing:

a. Before Use of The Range: The Officer in Charge of Firing will be responsible that:

(1) Both he and his supervisory personnel are thoroughly familiar with Section I, Appendix I, FM 6-40 and FM 6-140, FM 6-75 (105mm Howitzer) FM 6-81 (155mm Howitzer) and AR 750-10.

(2) The following minimum number of personnel are designated:

1 Officer - Commanding Officer of Unit Firing.
1 Safety Officer at each Battery Position.
EM Range Guards as needed (See a.6. above).
1 EM Telephone Orderly.
2 EM First Aid Men.

(3) One (1) ambulance will be available during firing.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04
Reproduced at the National Archives

(4) All firing personnel have completed training as outlined in FM 6-75 (for 105mm Howitzer) or FM 6-81 (for 155mm Howitzer).

(5) Post Range Guards (See Annex #8) at least thirty (30) minutes prior to scheduled firing time. Numbered range guards will be posted during all firing. Lettered range guards will be posted when corresponding lettered firing positions are being used.

(6) Instruct range guards as to their duties, i.e., allow no one to enter the impact area or gun position area without permission of the Range Officer or the Commanding Officer of unit firing.

(7) Raise the Red Flag, See Annex #8 , when range is clear for firing.

(8) Notify the Commanding Officer of unit firing when range is clear for firing.

(9) Entry into firing positions for the following gun positions will be as listed below;

"A" - From the South along Telephone Road.
"B" - From either of the following:

(a) From the North on the trail from Old Camden Road at coordinates (1015.4-1217.5).

(b) From the South on the Washington Light Infantry Road.

"C" - From the South along Hartsville Guards Road.

b. During Use of Range;

(1) The Officer in Charge of Firing will be in constant communication with the Observation Post (CO of Unit firing) and as near as practicable to his Range Guards.

(2) The Officer in Charge of Firing will be responsible that all safety requirements and precautions outlined in par 38 a (1) are complied with.

c. After Use of Range; The Officer in Charge of Firing will be responsible that;

(1) Range Guards are relieved.

(2) All trash has been policed.

(3) A certificate has been executed on all HE ammunition expended.

SECTION X

PISTOL RANGE "E"

39. Description;

a. Location; (1027.4-1212.5).

b. Telephone Number; Tie Line 14.

c. Number of Firing Points; 60.

RANGE REGULATIONS

FORT JACKSON
SOUTH CAROLINA

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04

RG 337, Hq. Army Ground Forces
Entry 108 (U.D.)
AGF + AFF Installations
Box 34

HEADQUARTERS
Fort Jackson, South Carolina

GNJDT 300.8 15 April 1950

SUBJECT: Range Regulations

TO: See Distribution

RANGE REGULATIONS FORT JACKSON

1. These regulations will be treated as Memorandum Receipt property and will be turned in to Post Range Officer prior to the units departure from this Post. The Post Range Officer is designated as accountable officer for these regulations and is charged with distribution to units using the range facilities at this Post. Individual sections will not be removed from these regulations; the book will be maintained as bound.

2. In case of revision, each newly revised page will indicate, at the top, the page that it rescinds. Such changes will be posted and the old copies removed from the files.

3. All officers will familiarize themselves with all pertinent sections of these regulations prior to conducting range firing on any range.

4. Unit commanders are responsible that all range firing is conducted in compliance with the instructions set forth herein.

BY ORDER OF COLONEL REES:

F. J. REESE
Lt Col, AGD
Adjutant

Distribution:
1 Hq Third Army
6 Post Hq, Ft Jackson, SC
10 S-3, Fort Jackson, SC

Reproduced in the U.S.A. - Do not reproduce

a. All personnel of the company are notified of the Fire Alert status of the company.

b. All personnel (less not more than 15%) are immediately available to the company area at all times during the Fire Alert tour.

c. Not less than one (1) officer and four (4) non-commissioned officers are available on thirty (30) minutes notice for supervision in case of fire.

8. Instructions in case of fire:

a. In the event of a fire on the Fort Jackson reservation the Fire Alert Company will be alerted by the Fire Marshal. At the time of alerting, the Fire Marshal will furnish information to the Fire Alert Company as to the transportation being furnished to the Company.

b. The First Sergeant, (or the Charge of Quarters if after duty hours) will notify, by the most expeditious means, the Alert Officer and Non-commissioned Officers of the Alert, and will then proceed to form the company in readiness to move to the fire.

c. The Alert Officer, upon arrival in the company area will assume command of the company, and will hold the company in readiness pending instructions from the Fire Marshal. Troops will be issued any fire fighting equipment available in the company area such as picks, shovels, etc. Personnel will again be cautioned on the dangers of handling duds.

d. Once alerted and until released from alert, by the Fire Marshal, the Fire Alert Company will be under direct control of the Post Fire Marshal. The Post Fire Marshal will be responsible for the movement, and employment of this company in combating the fire.

e. At all times during the actual fighting of the fire, the Alert Officer and Non-commissioned Officers will be in the immediate vicinity of the men fighting the fire, and will exercise close supervision to prevent touching of duds by personnel.

SECTION III

AMMUNITION, EXPLOSIVES AND DUDS

9. Members of any command quartered in company or detachment areas will not have ammunition, grenades, shells, fuses, or any other explosive, live or otherwise, of any type, in their possession or secreted on the reservation. Such items may be in the possession of military personnel only when required in the performance of military duty. Unit Commanders will make frequent searches to insure compliance with the preceding regulation and will cause a search to be made of all EM after any use of ammunition or explosives.

10. Any enlisted man at this station who discovers the unauthorized presence of explosives referred to above will immediately report such to the unit commander. No one will molest, touch, or in any manner handle such explosives whenever found except as follows:

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

a. When required in performance of military duty.

b. When small arms ammunition (caliber .22, .30, .45, and .50) is discovered, the finder will collect and carry same openly to unit commander for disposition.

11. No one will procure, secure or retain in their possession any explosive, dud of any type or any part thereof as a souvenir of for their own personal use, unless specifically authorized in writing by a commissioned officer to have such items.

12. Duds:

a. It is the responsibility of all unit commanders to orient their troops in the danger of handling duds. Specifically:

(1) Teach men the importance of leaving DUDS ALONE.

(2) "Policing the Area" does NOT mean picking up duds.

(3) HE impact areas are OFF LIMITS except as outlined in (4) and (5) below.

(4) The Officer-in-charge of firing will be responsible for appointing experienced non-commissioned officers from within his own unit to check the impact area for all duds upon completion of firing. The non-commissioned officers so appointed will be the sole persons from the firing unit authorized to enter the impact area from the time the firing unit has fired its first live round until it has been cleared by Range Headquarters.

(5) For Weapons Demonstration Range: The only authorized personnel to enter the impact area are demonstrators and non-commissioned officers appointed by Officer-in-charge of firing as in (4) above.

b. In the event a dud is found, the site will be marked and the Range Officer, Fort Jackson will be notified as follows:

(1) Location of Dud (coordinates if possible)

(2) Type of Dud

(3) Number of Duds

(4) Person making report (Name, rank and organization)

c. All ranges and impact areas will be "Off Limits" to all unauthorized personnel, ie., any personnel not firing on the range or not a member of the permanent Range Detachment.

DECLASSIFIED
Authority NND 997000
By CO NARA Date 3-22-04

b. On-the-spot Maintenance: The Post Range Officer will be responsible for continuous maintenance, during firing, of target frames, target devices and communication lines.

17. After Use of Range by Using Units:

a. Final Clearance: The Post Range Officer will be responsible for issuance of a written clearance of the range upon request by the using unit. Prior to the issuance of this clearance, he will determine by inspection that:

(1) The range proper is in an acceptable state of police.

(2) The condition of range facilities is the same as when accepted by the using unit.

(3) All expendable and non-expendable range supplies and equipment are turned in by the using unit.

(4) The using unit has extinguished all range fires and has disposed of any known duds.

b. Necessary Repair: The Post Range Officer will be responsible for making all necessary repairs. He will be responsible for making the necessary work order requests to the Post Engineer or Post Signal Officer for repairs of such a nature as to require their aid.

SECTION III

Responsibilities of Officer-in-Charge of Firing

18. Before Using Range:

a. The Officer-in-Charge of firing will be responsible for the operation of ranges in compliance with pertinent provisions of:

SR 385-310-1
Pertinent Technical Manuals and Field Manuals
Chapter III below

He will also be responsible for the dissemination of the information contained in the pertinent provisions of the above references for all supervisory personnel.

b. The Officer-in-charge of firing will be responsible for notifying the Post Range Officer if, for any reason, firing is cancelled.

c. Safety Precautions: The Officer-in-charge of firing will be responsible that all personnel on the range have received a course of instruction in the weapon(s) to be fired and that they are familiar with:

(1) The safety features of the weapon(s) to be fired.

(2) The danger areas and safety limits.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04
Reproduced at the National Archives

(2) On the Firing Line:

(a) The organization of personnel on the firing line will be so arranged as to adapt the using unit to the course to be fired.

(b) The organization of personnel on the firing line will be so arranged as to make the most efficient use of the time allotted.

(c) An officer will be present on the firing line at all times.

(d) Safety precautions will be followed at all times, including the following:

1. Weapons will be pointed "down range".

2. Weapons will be cleared and placed in the "safe" firing position when not in operation.

3. "Cease firing" will be given at any time when a condition arises which in anyway precludes the continuation of safe firing.

4. Firing, limited to designated firing lines or areas and between designated limiting points, will be observed at all times.

5. No one will move from the firing line in the direction of the impact area until all weapons have been cleared and placed in the "safe" firing position and then not until order to do so has been given by the Officer-in-charge of the firing line.

6. No firing will be conducted when the scarlet streamer is not displayed on the range pole.

7. In case of an accident, such as the bursting of a barrel, or permanent damage to the weapon, the weapon will be left in the position in which the accident occurred and the Ordnance Officer, Fort Jackson, notified.

8. If any serious malfunction of Ordnance equipment occurs on the range, such equipment will be turned over promptly to the Ordnance Officer without effort to repair it.

(3) Pits (where applicable):

(a) Organization:

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

(5) Miscellaneous: All immediate repairs necessary will be reported to the Range Officer for action.

20. After Use of Range: The Officer-in-charge of firing will be responsible, upon completion of firing to:

a. Check for all range fires detected on the range, using the same procedure as in par 8 and 19 a (4) above, in the event one is discovered.

b. Check for, and report duds (where applicable) as follows:

(1) Appoint a limited number of responsible, experienced, non-commissioned officers to conduct a search for duds.

(2) Leave the suspected dud undisturbed.

(3) Mark the location by a dud marker (Note: Dud markers, 10" red discs with DUD marked in white letters, placed on 8 foot pole, are located in all target houses).

(4) Report the exact location by coordinates to the Post Range Officer. If Post Range Officer indicates that he will investigate immediately, leave someone nearby to guide him to the exact location.

c. Police the entire range site for trash and brass.

d. Conduct a search of all personnel for live ammunition.

e. Turn in all supplies, drawn specifically for range firing, to same agencies drawn from (See par 9 c, above).

f. Execute the following certificate (issued with all ammunition) for all HE ammunition expended:

C E R T I F I C A T E

(Battery_____, _____, Field Artillery Bn)

(Company_____, _____, Infantry)

_____
(Date)

I certify that the following information, concerning quantities of ammunition listed below, is true and correct to the best of my knowledge and belief:

TYPE	ISSUED	EXPENDED	TURNED IN	DUDS	LOCATION OF DUDS

_____
(Signature)

_____
(Name Typed)

_____
(Rank and Organization)

DECLASSIFIED
Authority NND 947020
By NARA Date 3-22-04

10. Sand bag walls at least 20 inches thick or equivalent protection are provided for coaches, officer-in-charge of throwing, assistant instructors, or nonparticipants in instruction.

11. Practice hand grenades are practically free from hazard when properly used but they require the same degree of care in handling and operation as the standard live grenades.

12. The practice grenade may be thrown a safe distance by the average thrower, but personnel should take cover for the purpose of training. The steel helmet should be worn. Although there is practically no danger involved, personnel should remain at a safe distance.

13. Practice grenades that fail to function (duds) will not be recovered until at least 10 minutes have elapsed, and should be handled by experienced personnel.

c. After Use of the Range:

(1) Execute certificate for all HE Ammunition expended (See par 20 f) for example of certificate.

(2) Police all trash, dummy grenades, and all component parts of practice grenades.

d. Dummy Grenade Court: Dummy grenade court will be used to familiarize men with the throwing positions.

e. Rear Area Training Area: Rear Area training area is to be used for instruction in nomenclature and characteristics of grenades only. No demonstrations in throwing practice or live grenades will be conducted in this rear training area.

SECTION II

PISTOL RANGE # 1 AND PISTOL RANGE "E"

24. Description:

a. Location:

Pistol Range # 1 - (1008.8 - 1214.9)
Pistol Range "E" - (1027.4 - 1212.5)

b. Telephone Number:

Pistol Range # 1 - Tie Line 14, Ring 3
Pistol Range "E" - None

c. Number of Firing Points:

Pistol Range # 1 - 20. See Annex # 7
Pistol Range "E" - 60. See Annex # 8

DECLASSIFIED
Authority NND 997000
By CO NARA Date 3.22.04

d. Type Weapon Fired: Automatic pistol, Cal. .45 M1911 or M1911A1
Colt Revolver, Cal. .45 M1917

e. Courses to be Fired: As prescribed in pars 87-90, FM 23-25

f. Distance from firing line to targets:

Pistol Range # 1 - 15, 25 & 50 yards
Pistol Range "E" - 15 & 25 yards

g. Safety Limits: See Annex # 1

h. Danger Area: See Annex # 1

i. Range guard positions: None

j. Available Range facilities:

Pistol Range # 1 - Target House
Latrine (to be used in conjunction with latrine on MG Range # 2).
Pistol Rests

Pistol Range "E" - Target House
Latrine
120 Pistol Rests

25. Responsibilities of Post Range Officer:

a. Continuous responsibilities: The Post Range Officer is responsible for the maintenance of all range facilities mentioned in 24j above.

b. Before use of range by using unit: The Post Range Officer is responsible for supplying using units with sufficient number of E&L type targets.

26. Responsibilities of Officer-in-charge of firing:

a. Before use of range: The Officer-in-charge of firing will be responsible that:

(1) Both he and his supervisory personnel are thoroughly familiar with pars 13, 24, 25, 91, 96 FM 23-35, SR 385-310-1, and par 1-20 of these range regulations.

(2) All firers have completed as a minimum requirement all mechanical training and marksmanship training listed in FM 23-35.

(3) All pistols have had safety devices tested per par 25 FM 23-35.

(4) All revolvers have had safety devices tested per par 64 FM 23-35.

b. During use of range:

(1) Behind the firing line (opposite side of firing line from impact areas).

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3.22.04

(a) Only weapons that have been unloaded, locked and cleared by the officer-in-charge of firing, will be permitted to be removed from the firing line.

(b) All weapons will be carried at the "Raise Pistol" position.

(2) On the firing line:

(a) Procedure for firing: As outlined par 94 e, FM 23-35.

(b) Organization: As outlined in par 94 a and d, FM 23-35.

(c) Safety. For pistol and revolver.

1. Execute unload every time the pistol or revolver is picked up for any purpose. Consider every revolver as loaded until proven otherwise.

2. Always unload the pistol or revolver if it is to be left where someone else may handle it.

3. Always point the pistol or revolver up when snapping it after examination. Keep the hammer fully down when the weapon is not loaded.

4. Never place the finger within the trigger guard until it is intended to fire or to snap for practice.

5. Never turn around at the firing point while you hold a pistol or revolver in your hand.

6. Never point the revolver or pistol at anyone. On the range do not snap for practice while standing back of the firing line.

For Pistol Cal. .45 M1911 or M1911A1 only

7. When units carrying the pistol are first formed, the officer or non-commissioned officer-in-charge causes the men to execute "Inspection Pistol".

8. The safe firing position referred to in par 19 a (2) (d) "Safety precautions" will be considered to have been attained when the weapon is unloaded, the magazine has been removed and the slide has been locked in the rear position by the [illegible] slide stop.

DECLASSIFIED
Authority NND 947020
By NARA Date 3.22.04

9. Before loading the pistol, draw back the slide and look through the bore to see that it is free from obstruction.

10. On the range do not insert a loaded magazine until the time for firing.

11. On the range do not load the pistol with a cartridge in the chamber until immediate use is anticipated. If there is any delay, lock the pistol and unlock it only while extending the arm to fire. Do not lower the hammer on a loaded cartridge; the pistol is much safer cocked and locked.

12. In reducing a jam, first remove the magazine.

13. To remove a cartridge not fired, first remove the magazine and then extract the cartridge from the chamber by drawing back the slide.

For Revolver Cal. .45

14. The safe firing position referred to in par 19 a (2) (d) 2 "Safety precautions" will be considered to have been attained when the weapon is unloaded, the cylinder is opened and the safety has been placed in a safe position.

15. Before loading, open the cylinder and look through the bore to see that it is free from obstruction.

16. On the range do not cock the revolver until immediate use is anticipated. If there is any delay, lower the hammer and recock it only when ready to fire.

17. If the revolver fails to fire, open the cylinder and unload if the hammer is down. If the hammer is cocked or partly cocked, a breakage has occurred. In this case hold the revolver at "Raise Pistol" and announce the fact to the officer-in-charge.

18. To remove a cartridge not fired, open the cylinder and eject, first lowering the hammer if cocked.

(d) After Use of Range: The Officer-in-charge of firing will be responsible that all trash has been policed and burned and that all brass has been collected and disposed of in accordance with par 108, AR 775-10.

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

SECTION III

DISMOUNTED SUB-MACHINE GUN RANGE # 1

27. Description:

a. Location: (1017.4 - 1212.2) See Annex # 1.

b. Telephone Numbers: Tie Line 10 Ring 2.

c. Number of Firing Points: 3 (See Annex # 19).

d. Type Weapon Fired: Sub-Machine Gun M3A1 Cal. .45, Thompson Sub-Machine Gun Cal. .45 M1928A1

e. Course to be fired on range: See par 53-57 FM 23-40 and FM 23-41.

f. Safety Limits: See Annex # 1.

g. Danger Area: See Annex # 1.

h. Range Guard Positions:

(1) Position: Guard at junction of Timmonsville Guard Road and Range Road. Coordinates (1018.2 - 1211.4).

Instructions: Allow no travel to proceed North on Timmonsville Guard Road into impact area.

(2) Position: Guard at Weston Pond Road and Hwy # 262. Coordinates (1015.7 - 1210.4).

Instructions: To allow no traffic to proceed North on Weston Pond Road from Hwy # 262.

(3) Position: Guard at junction of Washington Light Infantry Road and Hwy # 262. Coordinates (1015.3 - 1210.4).

Instructions: To allow no traffic to proceed North on Washington Light Infantry Road from Hwy # 262.

i. Available Range Facilities:

(1) Covered Latrine

(2) 3 Target Houses

(3) Target frames, target assemblies and levers.

j. Type Target: E, F and Trapezoid.

28. Responsibilities of Post Range Officer:

a. Continuous responsibilities: The Post Range Officer is responsible for the maintenance of all range facilities mentioned in par 27 i, above.

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

b. Before Use of Range by Using Unit: The Post Range Officer is responsible for supplying using units with targets listed in paragraph 27 j above, target frames and paste.

29. Responsibilities of Officer-in-charge of firing:

a. Before Use of Range: The Officer-in-charge of firing will be responsible that:

(1) Both he and his supervisory personnel are thoroughly familiar with par 53-57, FM 23-40, FM 23-41, SR 385-310-1 and par 1-20 of these range regulations.

(2) All firers have completed, as a minimum requirement, all mechanical training, gun drill and marksmanship required by FM 23-40 and FM 23-41.

(3) Prior to Firing:

(a) An officer will check each gun and make sure that each weapon is functioning properly.

(b) A cleaning rod and dry patch is run through the bore of each gun.

b. During Use of the Range:

(1) Operation of the Range:

(a) Behind the firing line (Opposite side of firing line from impact area): The Officer-in-charge of firing will be responsible that before removing a sub-machine gun from the firing points, or from the firing line, each gun will be inspected, by an officer to see that it is unloaded. As part of this inspection, a cleaning rod will be passed through the bore of each gun.

(b) On the Firing line:

1. Safety Precautions: The Officer-in-charge of firing will be responsible for the accomplishment of the following safety precautions: Note: The "Safe firing position" referred to in par 19 (2) (d) 2 "Safety Precautions" will be considered to have been attained for the sub-machine gun when:

a. The bolt has been opened.

b. A cleaning rod has been passed through the barrel.

(c) All decisions as to actions to be taken on stoppages will be made by an officer.

c. After Use of Range: The Officer-in-charge of firing will be responsible that all trash accumulated in the trash bin is burned in the metal receptacles provided for that purpose, that proper disposition has been made of all brass and that the targets have been prepared for use by the next unit.

SECTION IV

Machine Gun Range # 1 and # 2

30. Description:

a. Location:

Range # 1 - (1008.1 - 1215.1). See Annex # 1
Range # 2 - (1009.1 - 1214.7).

b. Telephone Number:

Range # 1 - Tie Line 14, Ring 1.
Range # 2 - Tie Line 14, Ring 2.

c. Number of Firing Points:

Range # 1 - 60. See Annex # 5.
Range # 2 - 60. See Annex # 6.

d. Type Weapon Fired: Machine Gun Cal. .30, Light (M1919A4)
Machine Gun Cal. .30, Heavy (1917A1)

e. Course to be Fired: A or B.

f. Distance from gun position to target: 500 and 1000 inches.

g. Safety Limits: See Annex # 1.

h. Danger Area: See Annex # 1.

i. Range Guard Positions: None necessary.

j. Available Range Facilities:

(1) Control Tower
(2) Covered Latrine
(3) Dry Firing Line with 60 Targets
(4) Mess Hall
(5) Scoring and Critique Tables
(6) Supply House
(7) Target House

k. Type Target: 500 or 1000 inch Machine Gun.

31. Responsibilities of Post Range Officer:

a. Continuous Responsibilities: The Post Range Officer is responsible for the maintenance of all range facilities mentioned in par 30 j, above.

b. Before Use of Range by Using Unit: The Post Range Officer is responsible for supplying using units with 500 and 1000 inch Machine Gun targets and target frames.

32. Responsibilities of Officer-in-charge of firing:

a. Before Use of Range: The Officer-in-charge of firing will be responsible that:

DECLASSIFIED
Authority NND 947000
By NARA Date 3-22-01

(1) Both he and his supervisory personnel are thoroughly familiar with pars 110-122, FM 23-55, SR 385-310-1 and par 1-20 of these range regulations.

(2) All firers have completed, as a minimum requirement, all mechanical training, gun drill and marksmanship required by FM 23-55.

(3) Prior to Firing:

(a) An officer will check headspace of each gun and make the proper adjustment.

(b) A cleaning rod and dry patch is run through the bore of each gun.

b. During Use of the Range:

(1) Operation of the Range:

(a) Behind the firing line (Opposite side of firing line from impact area): The Officer-in-charge of firing will be responsible that before removing a machine gun from its firing position, or from the firing line, each gun will be inspected, by an officer to see that it is unloaded. As part of this inspection, a cleaning rod will be passed through the bore of each gun.

(b) On the Firing Line:

1. The most efficient organization, for this range consists of a breakdown into 5 equal sized orders as outline below.

1 Order Gunner	Wet Line
1 Order Asst Gunner	Wet Line
1 Order Observer	Wet Line
1 Order Gunner	Dry Line
1 Order Asst Gunner	Dry Line

2. Safety Precautions: The Officer-in-charge of firing will be responsible for the accomplishment of the following safety precautions: Note: The "Safe firing position" referred to in par 19 a (2) (d) 2 "Safety Precautions" will be considered to have been attained for the machine gun when:

a. A cleaning rod has been passed through the bore.

b. A clearing block has been placed in the receiver of the gun.

(c) A clearing block should be inserted in the receiver of each gun during the time it is not being used to fire.

(d) All decisions as to actions to be taken on stoppages will be made by an officer.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04

c. After Use of Range: The Officer-in-charge of firing will be responsible that all trash accumulated in the trash bin is burned in the metal receptacles provided for that purpose and that all brass has been collected and disposed of in accordance with par 108, AR 775-10.

SECTION V

.50 CAL. MACHINE GUN 1000" RANGE

33. Description:

a. Location: Center of Firing Line (1029.7 - 1216.3)

b. Telephone Number: TL 18 R 3

c. Number of Firing Points: 12

d. Type of Weapon: .50 Cal. Machine Gun, ground or vehicle mount

e. Safety Limits: See Annex # 1

f. Danger Areas: See Annex # 1

g. Range Guard Position:

(1) Position: Guard at junction of Pilgrim Church Road and Range Road. Coordinates (1029.7 - 1216.4)

(2) Instructions: To allow no traffic to proceed West on Pilgrim Church Road from Range Road

h. Available Range Facilities:

Target frames

34. Responsibilities of Post Range Officer:

a. Continuous Responsibilities: The Post Range Officer is responsible for the maintenance of all range facilities mentioned in par 33 h, above.

b. Before use of Range by Using Unit: The Post Range Officer is responsible for supplying using units with targets, target frames, and paste.

35. Responsibilities of Officer-in-charge of firing:

a. Before Use of Range: The Officer-in-charge of firing will be responsible that:

(1) Both he and his supervisory personnel are thoroughly familiar with safety regulations for weapon being fired, SR 385-310-1 and par 1-20 of these range regulations.

(2) All firers have completed, as a minimum requirement, all mechanical training, gun drill and marksmanship, required by FM 23-65.

DECLASSIFIED
Authority NND 947020 By CO NARA Date 3-22-04

(2) On the firing line:

(a) Procedure for firing:

Rifle - as outlined in FM 23-5.
Carbine - as outlined in FM 23-7.
BAR - as outlined in FM 23-15.

(b) Organization of the firing line:

Rifle - as outlined in FM 23-5.
Carbine - as outlined in FM 23-7.
BAR - as outlined in FM 23-15.

(c) Safety:

1. The "Safe Firing Position" referred to in par 19 a (2) (d) 2 "Safety Precautions" will be considered to have been attained when:

Weapon is locked.
Ammunition is completely removed from the weapon.
Bolt is open.
A cleaning rod has been run through the bore of the weapon.

2. Weapons will be checked daily by an officer prior to firing to determine that chambers and bores are free from obstruction.

(d) Communication: Control of the pits will be maintained by telephone communication from the firing line.

All request for marking and disking targets will be transmitted via telephone.

(3) Pits:

(a) Personnel in the pit details will stay on the concrete walk between the target frames and the revetment at all times when firing is in progress.

c. After Use of the Range:

(1) Brass will be policed daily after the use of the range.

(2) All trash accumulated will be policed daily.

SECTION VII

RIFLE TRANSITION RANGE # 1

39. Description:

a. Location (1008.7 - 1212.3)

DECLASSIFIED
Authority NND 947000
By NARA Date 3-22-04

b. Telephone Number - Tie Line 11.

c. Number of firing lanes: 15.

6 lanes (1 through 6) - Table VI.
4 lanes (7 through 10) - Table VII.
1 lane (11) - Table VIII.
4 lanes (12 through 15) - Table IX.

d. Course to be fired:

Table VI and VII - Par 69d FM 23-5
Table VIII - Par 69d FM 23-5, C2
Table IX - as follows:

PHASE LINES	TARGETS SINGLE	DOUBLE	TRIPLE	RANGE YARDS	SHOTS	TARGET	POSITION	SLING
2 - 3	2	1	0	5-70	4	E	Off Hand	None
3 - 4	0	1	2	5-70	8	E	Hip	None
4 - Final	2	3	0	5-70	8	E	Off Hand	None

(1) A single silhouette represents an enemy rifleman. A double silhouette represents an enemy automatic rifle team.
A triple silhouette represents a machine gun.

(2) Targets will be exposed in sequence upon signal from the coach. Time of exposure of targets is as follows: (a) Single silhouettes, 3 seconds. (b) Double silhouettes, 4 seconds. (c) Triple silhouettes, 5 seconds.

(3) Phase lines are placed after the 4th, 12th and 20th targets to assist in the enforcement of safety precautions.

e. Scoring and satisfactory scores:

TABLE	SCORING PROCEDURE	SATISFACTORY SCORES
Table VI & VII	Par 69e, (1) & (2), FM 23-5	VI not applicable VII - 8
Table VIII	Par 69e (3), FM 23-5 C2	1 - 4
Table IX	For each target hit - 1 Pt	8

f. Type of weapon fired: Rifle Cal. .30, M1.

g. Distance from firing position to target:

Table VI - 200, 300, and 500 yards.
Table VII - 250, 300, 350, 400, 450 and 500 yards.
Table VIII - 100 yards.

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

h. Safety Limits: See Annex # 1

i. Danger Areas: See Annex # 1

j. Range Guard Positions:

(1) # 1 - Junction Ancrum Ferry Road and Hartsville Guard Road (1009.1 - 1213.4)

(a) Instructions:

1. Allow no one to enter Hartsville Guard Road.

2. Instruct all personnel travelling on Ancrum Ferry Road not to turn South between Range Road and Telephone Road.

(2) # 2 - Junction Ancrum Ferry Road and Telephone Road (1013.1 - 1214.3)

(a) Instructions:

1. Instruct personnel travelling on Telephone Road not to turn West between Ancrum Ferry Road and Hwy 262.

2. Instruct all personnel travelling on Ancrum Ferry Road not to turn South between Range Road and Telephone Road.

(3) # 3 - Junction Telephone Road and Hwy 262 (1013.3 - 1210.1)

(a) Instructions:

1. Instruct personnel travelling on Telephone Road not to turn West between Hwy 262 and Ancrum Ferry Road.

(4) # 4 - Junction Catawba Rifles and Range Road (1008.6 - 1211.7)

(a) Instructions:

1. Instruct personnel travelling on Range Road not to turn East between Catawba Rifles Road and Ancrum Ferry Road.

2. Allow no one to enter Catawba Rifles Road.

(5) # 5 - Junction Ancrum Ferry Road and Range Road (1008.3 - 1213.2)

(a) Instructions:

1. Instruct personnel travelling on Range Road not to turn East between Ancrum Ferry and Semmes Roads.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04

(6) # 6 - Junction Semmes Road and Range Road (1008.6 - 1211.2)

(a) Instructions:

1. Instruct personnel travelling on Semmes Road not to turn North between Range Road and Telephone Road.

2. Instruct personnel travelling on Range Road not to turn East between Semmes Road and Anerum Ferry Road.

(7) # 7 - Junction Semmes Road and Hartsville Guard Road (1011.2 - 1209.3)

(a) Instructions:

1. Instruct personnel travelling on Semmes Road and Hwy 262 not to turn North between Range Road and Telephone Road, except that personnel may travel on Hartsville Guard Road not further than 1500 yards North of Hwy 262.

k. Available range facilities:

(1) 7 Control Towers
(2) 1 Latrine
(3) 1 Set of Bleachers
(4) 2 Target Houses
(5) Work Tables
(6) Mess Area
(7) Communication Arrangement (See Annex # 21).
(8) Table Model of Range

40. Responsibilities of Post Range Officer:

a. Continuous Responsibilities: The Post Range Officer is responsible for the maintenance of all range facilities mentioned in k (above).

b. Before Use of Range by Using Unit: The Post Range Officer is responsible for supplying using units with a sufficient number of type "E" Silhouettes, including those colored Red for 500 yard firing, and a sufficient number of target staves for the entire period of firing.

41. Responsibilities of Post Signal Officer:

a. Before Use of Range by Using Unit: The Post Range Officer will be responsible for instructing the Unit Range Officer in the use of permanent type telephone system. On request from the Post Range Officer, the Post Signal Officer will make the necessary repairs to these facilities.

42. Responsibilities of Officer-in-Charge of Firing:

a. Before Use of Range: The Officer-in-Charge of firing will be responsible that:

DECLASSIFIED
Authority NND 947030
By CO NARA Date 3-22-04

(1) Both he and supervisory personnel are thoroughly familiar with pars 34, 69d, e, f, g, 189-191b FM 23-5, C1 and 2, and SR 385-310-1 and Annex # 24 as well as par 1-20 of these range regulations.

(2) All firers have fired the rifle qualification Course "B" and have received instruction in range estimation, assuming firing position and assault fire required by Annex 24.

(3) One day prior to firing the Unit Range Officer makes a check of the range facilities, supplies and communications to insure that the range is in proper condition for firing. Any deficiencies will be reported to the Post Range Officer promptly so that repairs can be made prior to firing.

(4) Range Guards are posted in psoitions listed in 39 j above.

(5) When pits are filled with water, they are bailed out prior to firing and that every third pit has a bucket available for any subsequent seepage into the pits.

(6) The pit details are familiarized with their duties and have at least one "dry run" prior to actual firing.

b. During Use of Range: The Officer-in-charge of firing will be responsible for the overall operation of the range to include:

(1) Behind the firing Line (Opposite side of firing line from impact area).

(a) Only weapons that have been unloaded, locked, and cleared by an officer will be permitted to be removed from any firing point or firing line.

(b) Movement in rear of firing points by personnel undergoing this course will be at a walk with rifles held at "Port Arms".

(c) Any minor repairs on table model targets and table 9 will be done by using unit.

(2) On the Firing Line:

(a) Procedure for firing: As outlined in Annex 24.

(b) Organization of firing line: As outlined in Annex 24.

(c) Safety:

1. The safe firing position referred to in par 19 a (2) (d) 2, "Safety precautions" will be considered to have been attained when:

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04

a. Rifle is locked.

b. Ammunition completely removed from rifle.

c. Bolt is open.

d. A cleaning rod has been run through the bore of the rifle.

2. Safety Precautions: For Table IX.
The firer will be instructed prior to firing that targets are not more than 3 feet in size, targets will be on same level as ground, targets to front, right or left front only.
The Coach Cadreman will;
Stay immediately in rear of firer.
Regulate speed of movement of firer.
Keep target operation well in rear of firer.
Determine that firer's weapon is unloaded and bolt is open before moving back to starting point.

(d) Communication: The firing point on each firing lane will maintain contact with the pits in its own lane by the use of field telephones.

(3) Pits:

(a) Organization: Pit details subsequent to the first order will be thoroughly instructed in their duties and in safety precautions to be observed while operating the pits.

(b) Communication: Each lane within each of the 4 tables will have its own integral communication met by which control will be exercised. as follows;

TABLE VI: The centerpit at each of the three ranges (200,300,500 yds) will have a terminal for telephone communication to the firing point.
Communication between any of the three pits located at one of the three ranges may be established by use of whistles signals.
Suggested signals are as follows:
"Attention" 4 short blasts
"Targets Up" 1 long blast
"Targets Down" 2 long blasts
"All Clear" 2 short blasts

TABLE VII: Each pit at each of the six different ranges (200,250, 300, 350, 400 & 450 yds) will have a terminal for telephone communications to the firing point.

TABLE VIII: The pit will have a terminal for telephone communication to the firing point.

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

(c) Red silhouette targets used at 500 yds will be scored and pasted on the backside so as to not deface the red front.

(d) Scoring: Scoring will be accomplished by pit detail as follows.

TABLE VI: Flutter and lower target when hit, then score.
TABLE VII: Same as above.
TABLE VIII: Score after command "Targets Down" is given.
TABLE IX: Not applicable (see par 39 d & e, for scoring).

(e) Safety: See par 19 (2) (d) 2 "Safety".

c. After Use of Range: The Officer-in-Charge of firing will be responsible:

(1) That all trash accumulated in trash bins is burned.

(2) That new targets are fastened on all staves and then stored in target house for the use of the next unit.

SECTION VIII

RIFLE AND CARBINE TRANSITION RANGE # 1 AND # 2

43. Description:

a. Location:

(1) Range # 1 (1029.8 - 1216.6)
(2) Range # 2 (1028.2 - 1218.8)

b. Telephone Numbers:

(1) Range # 1 - TI 21 R1
(2) Range # 2 - TI 21 R2

c. Number of firing lanes:

(1) Range # 1: 10

6 lanes (1 thru 6) Table 6 - M-1
Table 4 - Carbine
4 lanes (7 thru 10) Table 7 - M-1
Table 5 - Carbine

(2) Range # 2: 6

4 lanes (1 thru 4) Table 6 - M-1
Table 4 - Carbine
2 lanes (5 thru 6) Table 7 - M-1
Table 4 - Carbine

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

(5) Red flag is taken down upon completion of firing.

(6) All trash around gun position is policed upon completion of firing.

SECTION XIII

4.2 MORTAR RANGE # 1 AND # 2

57. Description:

a. Location:

(1) Range # 1 - Firing line coordinates (1009.4 - 1214.1) to (1009.3 - 1214.3)

(2) Range # 2 - Firing line coordinates (1022.45 - 1218.45) to (1022.20 - 1218.75)

(3) Impact Area - (See Annex # 1)

b. Telephone Number:

(1) Range # 1 - Tie line 14, Ring 4

(2) Range # 2 - None

c. Type of Weapon: 4.2" Chemical Mortar. (See FM 23-92 and TC 3 DA 28 Feb 50)

d. Maximum Range:

(1) Range # 1 - No weapon will be fired at a range greater than 1800 yards.

(2) Range # 2 - No weapon will be fired at a range greater than 2000 yards.

e. Targets: Natural terrain features. Drums and 6' x 6' target frames may be put out.

f. Observation Position:

(1) 4.2" Mortar Range # 1 - Control tower above firine line.

(2) 4.2" Mortar Range # 2 - Bunker # 17, coordinates (1022.4 - 1218.9).

g. Available facilities for 4.2" Mortar Range # 1:

Control tower
Stands capable of seating approx 1200
Latrine
Two target houses

h. Safety Limits: (See Annex # 1)

i. Danger Areas: (See Annex # 1)

j. Range Guard Positions:

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-01

(1) 4.2" Mortar Range # 1: -

(a) # 1 - Junction Ancrum Ferry Road and Range Road (1009.1 - 1213.3).

1. Instructions:

a. Instruct personnel travelling on Ancrum Ferry Road not to turn North between Range Road and Telephone Road.

b. Instruct personnel travelling on Range Road not to turn East between Ancrum Ferry and Camden Roads.

(b) # 2 - Junction Ancrum Ferry and Telephone Roads (1013.1 - 1214.3).

1. Instructions:

a. Instruct personnel travelling on Ancrum Ferry Road not to turn North between Telephone Road and Range Road.

b. Instruct personnel travelling on Telephone Road not to turn West between Ancrum Ferry and Old Camden Roads.

(c) # 3 - Junction Old Camden Road and Telephone Road (1014.5 - 1217.5).

1. Instructions:

a. Instruct personnel travelling on Telephone Road not to turn West between Old Camden Road and Ancrum Ferry Road.

b. Instruct personnel travelling on Old Camden Road not to turn South between Telephone Road and Range Road.

(d) # 4 - Junction Old Camden Road and Range Road (1007.6 - 1215.1).

1. Instructions:

a. Instruct personnel travelling on Old Camden Road not to turn South between Range Road and Telephone Road.

b. Instruct personnel travelling on Range Road not to turn East between Old Camden Road and Ancrum Ferry Road except that personnel firing on ranges may enter those Ranges.

(2) 4.2" Mortar Range # 2: Five Range Guards will be posted at points indicated in Annex # 1 at 30 minutes prior to scheduled firing time.

(a) # 1 Guard will prevent any travel from going Northeast on Division Road.

DECLASSIFIED
Authority NND 947030
By NARA Date 3.22.04

(b) # 2 Guard will prevent travel from going South on Colonel Creek Road into the impact area.

(c) # 3 Guard will prevent any travel from going on Messers Pond Road from turning South on the road into the impact area.

(d) # 4 Guard will prevent any traffic from going West on Division Road into the impact area.

(e) # 5 Guard will prevent any traffic on Chavers PondRoad from going West into the impact area.

The officer-in-charge of firing will make sure the temporary road block is in position at junction of highway # 262 and Colonel Creek Road, coordinates (1025.9 - 1211.8). The officer-in-charge of firing will be responsible that any additional range guards necessary to insure that safety measures are observed are posted on approaches into the danger area.

k. Safety: The provisions of SR 385-310-1 and FM 23-92 will govern all firing. In case of conflict, SR 385-310-1 will govern all firing.

58. Responsibilities of Officer-in-Charge of Firing:

a. In addition to his responsibility for the posting of necessary range guards, the officer-in-charge of firing will be responsible that:

(1) Range guards are instructed as to their duties, i.e., allow no one to enter the impact area or gun position area without permission of the range officer or the commanding officer of the unit firing.

(2) Both he and his supervisory personnel are thoroughly familiar with the provisions of SR 385-310-1, and par 1-20 of the Fort Jackson Range Regulations.

(3) Red flag is predominantly displayed in the vicinity of the gun positions when range is cleared for firing.

(4) The Commanding Officer of the unit firing is notified when range is cleared for firing.

(5) Range guards are relieved and red flag is taken down upon completion of firing.

(6) All trash around gun position is policed upon completion of firing.

b. The officer-in-charge of firing will be responsible for the control of fires and the protection of personnel against duds on the Mortar Range in accordance with par 8 Sec II and Sec III of Chapter I of these regulations.

(1) The officer-in-charge of firing will warn all personnel of the danger of "duds" in the area.

DECLASSIFIED
Authority NND 947030
By CO NARA Date 3-22-04

(a) Duds discovered on the range will be plainly marked so they can be seen for a distance of 100 yards. These duds will not be moved or tampered with except by authorized personnel.

(b) The location of any duds will be reported to the Post Range Officer. Reports will show type, location and map coordinates and the name, rank, organization and telphone number of any person familiar with dud locations.

(2) The control of fires resulting from firing on the Mortar Range is the responsibility of the officer-in-charge of firing.

(a) When a fire on the Mortar Range is observed, the officer-in-charge of firing will immediately stop the firing and extinguish the fire.

(b) If the fire is located inside a danger area other than that of the Mortar Range, the officer-in-charge of firing will contact the Post Range Officer and report its location. The Post Range Officer will stop all firing in that area until the fire is extinguished.

(c) If a fire gets out of control of the using unit, the Post Range Officer and Post Engineer will be notified of that fact immediately.

(d) The officer-in-charge of firing will inspect the target area at the conclusion of each day's firing and extinguish all fires.

SECTION XIV

ROCKET LAUNCHER RANGE

59. Description:

a. Location: (1007.7 - 1216.4).

b. Telephone Number: Tie Line 15, Ring 3.

c. Number of Firing Points: 24

12 Practice Ammunition
12 Service Ammunition

d. Type of Weapon Fired: Rocket Launcher, 2.36 inch M9 and M9A1.

e. Distance from Gun Position to Target: 100 Yards.

f. Safety Limits: See Annex # 1.

g. Danger Area: See Annex # 1.

h. Rocket Launcher Range Guard Positions:

(1) # 1 - Boyden Arbor Road at (1007.0 - 1216.2)

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

(2) Danger Area: See Annex 11

(3) Safety Limits: See Annex 11

f. Range Guards: Range guards will be posted at points indicated in Annex 11 at least 30 minutes prior to scheduled firing time. The Officer-in-charge of firing will be responsible that any additional range guards necessary to insure that safety measures are observed are posted on approaches into the danger area. If the Artillery Range is in use at the same time that the Tank Range is being used, guard positions # 1, 2 and 3 of the Tank Range are not necessary. Temporary road blocks will be picked up at the KD Range Detachment and placed into position as indicated on Annex 11.

g. Safety: The provisions of SR 385-310-1 and the provisions of the appropriate Field Manuals will govern all firing. In case of conflict, SR 385-310-1 will govern.

69. Responsibilities of the Officer-in-Charge of Firing:

a. In addition to his responsibility for the posting of necessary range guards, the Officer-in-charge of firing will be responsible that:

(1) Range guards are instructed as to their duties, i. e., allow no one to enter the impact area or gun position area without permission of the range officer or the commanding officer of the unit firing.

(2) Both he and his supervisory personnel are thoroughly familiar with the provisions of SR 385-310-1 and par 1-20 of the Fort Jackson Range Regulations.

(3) Red flag is predominantly displayed in the vicinity of the gun positions and Weir Tower when range is cleared for firing.

(4) The Commanding Officer of the unit firing is notified when range is cleared for firing.

(5) Temporary road blocks have been placed in position and that same are returned to the KD Range Detachment upon completion of firing.

(6) Range guards are relieved and red flag is taken down upon completion of firing.

(7) All trash around gun position is policed upon completion of firing.

SECTION XVIII

ARTILLERY RANGE

70. Description:

a. Location: Gun Position Area - See Annex 12
Impact Area - See Annex 12

DECLASSIFIED
Authority NND 997030
By CO NARA Date 3-22-07

b. Telephone Number: (Weir Tower) Tie Line 10

c. Type Weapon Fired: 105mm and 155mm Howitzer and Rifles

d. Safety Limits: See Annex 12

e. Danger Area: See Annex 12

f. Range Guard Positions: See Annex 12

For Impact Area: All road guards on the numbered road guard positions will prevent entry into the impact area.

For Telephone Road: Two guards will be posted in addition to impact area road guards. RG-#2 (1013.0 - 1210.0) will allow only authorized traffic to proceed North along Telephone Road. RG-#11 (1011.2 - 1209.5) will allow only authorized traffic to proceed North along Telephone Road.

71. Responsibilities of Officer-in-charge of Firing:

a. Before Use of the Range: The Officer-in-charge of firing will be responsible that:

(1) Both he and his supervisory personnel are thoroughly familiar with Section 1, Appendix 1 FM 6-40 and FM 6-140, FM 6-75 (105mm Howitzer); FM 6-81 (155mm Howitzer); FM 6-90 plus C1 (155mm Gun); SR 385-310-1 and par 1-20 of these regulations.

(2) The following minimum number of personnel are designated:

1 Officer - Commanding Officer of Unit Firing.
1 Safety Officer at each Battery Position
EM Range Guards as needed (See par 68f above).
1 EM Telephone Orderly.
2 EM First Aid Men.

(3) One (1) ambulance will be available during firing.
(4) All firing personnel have completed training as outlined in FM 6-75 (for 105mm Howitzer) or FM 6-81 (for 155mm Howitzer) and FM 6-90 (for 155mm Gun).

(5) Three days prior to day of firing an overlay of the firing plan to include gun positions, proposed targets and type and number of weapons to be used will be sent to the Post Range Officer.

(6) Range Guards have been posted (See Annex 12).

(a) At least thirty (30) minutes prior to scheduled firing time. Numbered range guards will remain posted during all firing.

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-04

(b) Instruct range guards as to their duties, i. e., allow no one to enter the impact area or gun position area without permission of the Range Officer or the Commanding Officer of unit firing.

(7) Temporary road blocks have been received from the KD Range Detachment Area and have been placed in position prior to firing as indicated on Annex 12.

(8) Raise the red flag on Weir Tower. (See Annex 12), when range is clear for firing.

(9) Notify the Commanding Officer of unit firing when range is clear for firing.

(10) Entry into firing positions area will be as listed below:

(a) From Hwy 262 North on Telephone Road.

(b) From Old Camden Road South on Telephone Road.

(c) East to West on Ancrum Ferry Road.

(11) Before moving personnel into impact area for setting up targets or before moving personnel up to observation posts, clearance will be made with Post Range Officer in order that firing on Tank Range can be halted until impact area of this range has been cleared of personnel.

b. During Use of Range:

(1) The Officer-in-charge of firing will be in constant communication with the Observation Post (CO of unit firing) and as near as practicable to his Range Guards.

(2) The Officer-in-charge of firing will be responsible that all safety requirements and precautions outlined in par 38 a (1) are complied with.

c. After Use of Range: The Officer-in-charge of firing will be responsible that:

(1) Range Guards are relieved and that temporary blocks have been returned.

(2) All trash has been policed.

(3) A certificate has been executed on all HE ammunition expended.

SECTION XIX

AIR-TO-GROUND RANGE REGULATIONS

72. The purpose of these regulations is to govern the use of the Air-to-Ground Range and to prescribe safety precautions to be observed in its use.

INSTRUCTIONS ON THE PROCEDURE

IN THE USE OF

RIFLE TRANSITION RANGE # 1 (12 Hrs)

1. OBJECTIVE:

a. To give the individual soldier practice in searching for targets, in estimating ranges, in setting his sights rapidly, and in firing an accurate shot quickly.

b. To emphasize the necessity for the continued application of the principles of rifle marksmanship in firing at field targets.

c. To give the individual soldier practice in assault firing.

2. TEXT REFERENCES:

FM 23-5, C1, 2 & 3
FM 23-7, C4
SR 385-310-1
ATP 21-1
Range Regulations, Fort Jackson

3. PROCEDURE:

a. Period 1 (2 Hours):

(1) Subject: Range Estimation.
(2) Text References: FM 23-5, pars 120-124.
(3) Equipment: Blackboard; Range Chart; Paper and pencil for each trainee; Chart - Factors effecting estimation by eye.
(4) Area: Range Estimation Course.
(5) Procedure: Explain the importance of estimating range accurately. Explain each of the methods employed in estimating ranges (Use of tracers, observation of fire, estimation by eye). Conduct the practical work exercises described in FM 23-5, par 124.

b. Period 2 (1 Hour):

(1) Subject: Setting Sights Rapidly; Stoppages; Immediate action.
(2) Text Reference: FM 23-5, pars 35-38, 66.
(3) Area: Out-of-doors.
(4) Procedure: Review sight setting and changes. Explain the importance of setting sights rapidly. Conduct practical exercises in setting sights rapidly. Review stoppages and immediate action.

c. Period 3 (1 Hour):

(1) Subject: Assuming Positions Rapidly; Assault Fire.
(2) Text References: FM 23-5, pars 65c, 138.
(3) Equipment: Type "E" and "F" silhouette targets. 2 EE8 telephones; Blackboard; whistles.
(4) Area: Out of Doors.
(5) Procedure: Review firing positions; Conduct explanation, demonstration and practical work in assuming positions rapidly. Conduct practical exercises requiring soldiers to estimate ranges, set sights, assume a firing position, and simulate firing at silhouette targets which are exposed for brief intervals. Explain, demonstrate, and conduct practical work in assault fire position procedure.

ANNEX #24

DECLASSIFIED
Authority NND 947020

d. Period 4 (8 Hours):

(1) Subject: Transition Firing.
(2) Text References: FM 23-5, C1 and 2, pars 69d-g, 189, 191e.
(3) Personnel: Officer personnel requirements in sub par below are for ideal conditions. Minimum number for firing this range are:

Table VI and VII - 1 Officer
Table VIII - 1 Officer
Table IX - 1 Officer

(a) Table VI:
Officers: Two (2) Range Officers
Cadremen: Six (6) Asst Range Officers(Scorers)
Trainees: Fifty-four (54) Target Operators; two (2) ammunition bearers; one (1) Latrine Orderly; Six (6) Coaches

(b) Table VII:
Officers: Two (2) Range Officers
Cadremen: Four (4) Asst Range Officers
Trainees: Two (2) Target Operators; One (1) ammunition bearer; Four (4) Coaches

(c) Table VIII:
Officers: One (1) Range Officer
Cadremen: Four (4) Asst Range Officers
Trainees: Two (2) target operators; One (1) ammunition bearer; Four (4) Coaches

(d) Table IX:
Officers: One (1) Range Officer
Cadremen: Four (4) Asst Range Officers(Coaches)
Trainees: Four (4) target operators, One (1) ammunition bearer.

(e) Stations 1, 1A, 2 3, 4, 5, and 6:

One Orientation and Critique Non-commissioned officer for each station. Use table model of range.

(4) Equipment:

(a) Table VI; 72 targets
26 EE8 telephones
54 red flags
18 whistles
18 buckets suitable for bailing water.

(b) Table VII; 32 targets
27 telephones
2 whistles
24 red flags
8 buckets suitable for bailing water.

(c) Table VIII; 4 targets
2 telephones
1 red flag
1 bucket suitable for bailing water.

(d) Table IX; 1 red flag
16 clips adapted to hold 4 rounds.

(e) Station # 1 - Sight Blackening Equipment (Unit responsibility).
2 - Blackboards
3 - Blackboards
4 - Blackboards
5 - Blackboards and cleaning materials (Unit Responsibility)
1A - Clips of dummy ammunition.

DECLASSIFIED
Authority NND 947000
By CO NARA Date 3-22-04

(5) Area: Transition Range.

(6) Procedure: (See Annex # 3).

For Firing Line and Stations in Rear of Firing Line:

(a) Pit detail and coaches will precede firing personnel to the range by 40 minutes.

(b) Equipment Area: Direct troops to remove and align packs and excess equipment. Direct firing personnel to Station # 1.

(c) Station # 1: Review Safety Regulations in general and those peculiar to the Transition Range (FM 23-5, par 191). Orient soldiers on the course to be fired. Direct twelve (12) trainees to Table VI (6 wet firing and six (6) dry firing).

(d) Table VI: Conduct firing of Table VI as prescribed in Annex # 1. Require the dry firers to follow the course simultaneously with the actual firers. Direct personnel to Station # 2. Present score sheets to Critique Officer.

(e) Station # 2: Critique Firing. Direct personnel who display noted deficiencies to Station # 1A for additional instructions. Orient personnel on Table VII. Direct personnel to Table VII. Present scorers with score sheets.

(f) Table VII: Conduct firihg of Table VII as prescribed in Annex # 1. Require dry dirers to fire the course simultaneously with the actual firers. Direct personnel to Station #3. Present score sheets to Critique Officer.

(g) Station #3: Critique Firing. Direct personnel who failed to qualify to Station # 1A for further instruction. Orient personnel on Table VIII. Direct personnel to Table VIII. Present scorers with score sheets.

(h) Table VIII: Conduct firing of Table VIII as prescribed in Annex # 1. Require firer to "stand fast" between shots. No dry firing will be done. Direct personnel to Station # 4. Present score sheets to Critique Officer.

(i) Station # 4: Critique firing. Direct personnel who failed to qualify to Station # 1A. Orient personnel on Table IX. Direct personnel to Table IX. Present scorer (coach) with score sheets.

(j) Table IX: Conduct firing of Table IX as prescribed in Annex #1, (also see Annex # 4). No dry firing will be done. Direct personnel to Station #5. Present score sheets to Critique Officer.

(k) Station # 5: Critique firing. Direct personnel who failed to qualify to Station # 1A. Inspect rifles and search men for live ammunition. Require men to clean rifles. Inspect rifles for cleanliness. Direct men to Station # 6.

(l) Station # 6: Orient men on duties of target operators or coaches. Relieve target operators or coaches of a complete lane when sufficient personnel arrives.

(m) Station # 1A: (This Station may be incorporated with Station # 1 if desired)
Concurrent instruction will be presented on: Rapid setting of sights. Assuming firing position quickly. Rapid loading. Immediate action. Firing from sitting and kneeling positions. Firing

DECLASSIFIED
Authority NND 947020
By CO NARA Date 3-22-01

from "off-hand" and "hip-firing" positions. Officer in charge of training will replace men in flow when he believes them able to qualify.

For Pits:

(n) Tables VI, VII and VIII:
The officer in charge of the control tower for each table will:

Supervise instruction of pit detail.
Supervise drawing of targets and red flags.
Demonstrate the operation of a pit to include target operation and communication.
Supervise the installation of the pit detail in their respective pits.
Conduct sufficient number of dry runs to insure both efficient and safe operation.

(o) Table IX - The range officer in charge of this Table will orient and supervise the operation of this detail. Upon completion of firing this exercise, and upon signal by the coach, the target operator will assist in scoring and pasting the hits with the coach.

4. MISCELLANEOUS:

a. Targets are fastened to staves and are operated by men protected in individual pits.

b. At firing points for Tables VI and VII, the following men are the only authorized personnel at each point.

1 Firer (Dry Run) 1 Firer (wet) 1 Telephone Operator
1 Coach (dry run) 1 Coach (wet) 1 Asst Range Officer

c. Coaches:

(1) The coaches in Tables VI and VII will set-off the sights of all men under their control sufficiently to require an adjustment. This adjustment will be accomplished by the firer after he has taken his firing position.
(2) The coach will enforce safety regulations.
(3) The coach will observe firing technique.
(4) The coach will note errors on the score sheet.
(5) The coach will observe dry firers (where applicable) and make any necessary corrections.

d. During Table VIII and IX, "Battle Sights" will be set and left there during the entire course.

e. Pits: Pits will not be used as latrines.
Pits will be policed at the completion of each day's firing.

f. Scores: Score sheets (See Annex #2) will be reproduced by units concerned.

DECLASSIFIED
Authority NND 997030
By NARA Date 3-22-01

ANNEX # 1

TO

INSTRUCTION ON THE PROCEDURE IN
THE USE OF RIFLE TRANSITION RANGE # 1

1. Courses:

Table VI:

RANGE (YARDS)	TIME	SHOTS 1	TARGET 2	POSITION	SLING
200	60 Secs	5	3E	Kneeling or Sitting From Standing	Loop
300	60 Secs	5	3E	Prone from Standing	Loop
500	60 Secs	5	3E	Prone from Standing	Loop

1. The rifle is to be loaded with a partial clip containing five rounds.
2. Targets should be approximately five yards apart and as near the prescribed range as terrain permits.

Table VII:

RANGE 1 (YARDS)	TIME SECONDS	SHOTS 2	TARGET	POSITION	SLING
	120	10	6E	Prone from Standing	Loop

1. Two targets between ranges of 200 and 300 yards, two targets between 300 and 400 yards, and two between 400 and 500 yards. Each pair of targets will be staggered and separated in depth from 25 to 50 yards.
2. The rifle is to be loaded initially with a partial clip of two rounds and reloaded with a full clip.

TABLE VIII:

RANGE (Yards)	Time 1 Seconds	Shots 2	TARGET	POSITION	SLING
100	3 Secs per Round	5	E	Standing	None

1. Target will be exposed for 3 second period during which rifle will be brought to the shoulder and round fired.
2. Rifle is locked and loaded before start of exercise.
3. Rifle is held at the ready and brought to the shoulder for firing each round.

TABLE IX:

PHASE LINES	TARGETS SINGLE	DOUBLE	TRIPLE	RANGE (YARDS)	SHOTS	TARGET	POSITION	SLING
2-3	2	1	0	5-70	4	E	Off-hand	None
3-4	0	1	2	5-70	8	E	Hip	None
4-Final	2	3	0	5-70	8	E	Off-hand	None

DECLASSIFIED
Authority NND 997000
By CO NARA Date 3.22.04

Annex 1 to Instruction on the Procedure in the Use of Rifle Transition Range # 1 (contd)

a. A single silhouette represents an enemy rifleman.
A double silhouette represents an enemy automatic rifle team.
A triple silhouette represents an enemy machine gun.

b. Targets will be exposed in sequence upon signal from the coach.
Time of exposure of targets is as follows: (a) Single silhouettes, 3 seconds. (b) Double silhouettes, 4 seconds. (c) Triple silhouettes, 5 seconds.

c. Phase lines are placed after the 4th, 12th, and 20th targets to assist in the enforcement of safety precautions. (See Annex # 1.)

d. Firer starts from the prone position, with rifle locked, 4 rounds in the rifle, and two, 8 round clips in his belt.

e. On signal from the range officer, the firer rises and moves down the lane on the alert. As targets are exposed the firer fires one round at each silhouette between phase lines two and three from the "Off Hand" position. He then reloads and fires from the "Hip" firing position at each silhouette between phase lines three and four. He reloads again and fires from the "Off Hand" position at each silhouette between the fourth and final base lines.

f. A coach accompanies each firer, to insure control, to assist the range officer and to critique the firer at the end of his firing.

g. Safety Precautions:
The firer will be instructed prior to firing that targets are not more than 3 feet high, targets will be on same level as ground, targets to front, right or left front only.

2. Scoring:

a. Table VI:
For each target hit . . . . . 1 Point
For each unexpended round if all targets are hit. . . . 1 Point

b. Table VII: For each target hit
Between 200 and 300 Yards . . . . . 1 Point
Between 300 and 400 Yards . . . . . 2 Points
Between 400 and 500 Yards . . . . . 3 Points
For each unexpended round if all targets are hit. . . 3 Points

c. Table VIII:
For each target hit . . . . . 1 Point

d. Table IX:
For each target hit . . . . . 1 Point
For each unexpended round if all targets are hit. . . . 1 Point

e. Satisfactory Scores:

Table	Satisfactory Score
VI	Not applicable

April 10, 1951

HEADQUARTERS 31ST INFANTRY DIVISION
Office of The AC of S, G-2
Fort Jackson, S. C.

DDACB 10 April 1951

1. INTELLIGENCE TRAINING:

a. Twenty-One (21) officers and one hundred eight (108) enlisted men, division intelligence personnel, are currently attending Intelligence Courses at The Army General School, Fort Riley, Kansas and other service schools. Quotas have been approved for three (3) officers and fifty (50) enlisted men to attend intelligence courses at The Army General School commencing 25 April 1951.

b. All Division personnel are currently receiving Intelligence Training in accordance with appropriate ATP's.

c. A Division Intelligence School will be conducted during Unit Training Cycle, 11 June to 20 August 1951 inclusive.

2. AGGRESSOR:

a. Uniforms: There are approximately four hundred (400) AGGRESSOR Uniforms, complete with all accessories currently available for issue. Requisition for eleven hundred (1100) additional uniforms has been approved. 31st Division Quartermaster will coordinate issue of all AGGRESSOR Uniforms through the AC of S, G-2.

b. Simulation Equipment and Ammunition: Simulation Equipment and Ammunition have been requisitioned for use in AGGRESSOR Training.

c. AGGRESSOR Training:

(1) All AGGRESSOR training will be supervised and coordinated by AC of S, G-2.

(2) The AGGRESSOR Team from AGGRESSOR Headquarters, Fort Riley, Kansas, will present a demonstration for 31st Infantry Division 29 April - 5 May 1951 inclusive.

3. CLEARANCES:

Immediate Access clearances for access to TOP SECRET matter have been processed for the General Staff. Interim clearances for access to Secret matter have been processed for two hundred (200) officers and enlisted men of this division. Seven hundred eighty-five (785) Personal History Forms of division personnel have been processed to date. Cryptologic Clearance Requests have been processed for twenty-five (25) officers and enlisted men.

CONDENSED TRAINING REPORT

1. Pre-cycle (cadre) training was completed on March 3rd and on March 5th this division started basic training with a strength of approximately 21,000; all fillers having been received in time to start on schedule. Training progressed according to Master Training Program for National Guard Divisions, dated October 1950, until 23 March, when we were directed to complete PCR qualifications in 14 weeks. A revised schedule was issued and all units are now in the 6th week of basic training.

2. FACTORS AFFECTING TRAINING:

a. SHORTAGE OF TRAINED PERSONNEL:

(1) As of 10 April 1951 this division had 416 officers and 660 enlisted men in attendance at service schools off the post. 385 enlisted men are attending schools on the post. It is believed the handicap created by this situation will be more than repaid when these school trained personnel return to the division.

b. INSUFFICIENT TRAINING AREAS:

(1) While much has been said about securing additional maneuver area the fact remains that we are reaching that stage of training where more maneuver area is required than is now available. The leasing of the proposed strip South of the reservation will remedy this situation.

c. FACILITIES:

(1) A definite shortage exists in transition ranges, close combat ranges and combat in cities courses. The division has initiated action to construct two additional close combat ranges with its own forces and thus solve one problem. By firing Saturdays and Sundays we can complete transition firing. But we cannot complete combat in cities fighting in the required time unless given priority on the course.

(2) There is a shortage of class room space, ordnance shop facilities and storage space.

(3) The original Field Artillery range was inadequate. Current negotiations with post may correct this situation.

(4) There is no range available for AAA firing, nor 90MM tank firing.

DECLASSIFIED
Authority 54 7030
By CS NARA Date 3/23/07

HEADQUARTERS 31ST INFANTRY DIVISION
Office of AC of S, G-4
Fort Jackson, South Carolina

10 April 1951

SUBJECT: Supply Status, 31st Infantry Division

TO : Chief of Staff

1. One of the major problems is lack of Tactical Vehicles, especially for the 31st Division Artillery, in connection with Service Practice RSOP's being conducted. A letter has been written to the Commanding General, Ft. Jackson, South Carolina, in reference to this subject.

2. Division Artillery is authorized 100% TO&E on 155 and 105 Howitzers, which are on requisition, but is only authorized 30% on Prime Movers for said weapons. A letter was written to Commanding General, Ft. Jackson, requesting 100% TO&E for Tractors, High speed, 13 Ton M5A3, Prime Movers, also. Post has submitted requisitions on above basis.

3. Bayonets are issued on basis of one (1) per Rifle M-1 up to full TO&E strength, and one (1) per ten (10) men for balance of fillers. It is recommended that Bayonets be issued on the basis of one (1) per Rifle M-1 authorized. Knives, Bayonet M-4 are authorized on basis of one (1) per ten (10) Carbines. It is recommended that knives be issued on a basis of one (1) per Carbine.

4. Suspenders and Combat Packs are in short supply. General Sullivan called Army Field Forces to ascertain status of these items, during his visit with the 31st Division last week. General Sullivan indicated that these items would be available at an early date.

5. There has been a critical shortage of Combat Boots, but it is believed that each individual within the Division has at least one (1) pair of issue footwear. Said supply is improving gradually.

6. Steel Helmets were in short supply, but POst received 6,000 yesterday, which should practically complete requirements of the 31st Division.

7. The 31st Division is vitally in need of class room facilities. A letter has been written to Commanding General, Ft. Jackson, requesting ten (10) assembly tents be issued this Division for said purpose.

DECLASSIFIED
Authority 94-7020
By CSMRA Date 8/23/07

8. As mentioned in Par 1, lack of vehicles within the Division is one of the shortages that affect training, but this Division has received copies of Shipping Documents, covering 132, 2½ Ton, 6x6, M-34 Trucks, and a copy of a telephone conversation which indicates an additional allotment of 238 Trucks.

9. With exception of aforementioned items, the supply status of the Division as a whole is satisfactory.

Clifford P Morrison

CLIFFORD P MORRISON
Lt. Col. GSC
AC of S G-4

DECLASSIFIED
Authority 54 7030
By CSKRA Date 8/23/07

REDUCED TABLE OF ORGANIZATION

The 31st Division is organized under the reduced strength Table of Organization for an Infantry Division. This Division has approximately 50% overstrength in enlisted men. There are 416 officers away at Army Field Forces' Schools. It was determined that it would be far better to have the Division weak in the beginning and strong in the end as a policy, and therefore a determined effort was made to fill every available quota. Naturally with a reduced T/O strength in officers, further reduced by officers attending school, the problem of training has placed a tremendous burden on those officers remaining. They have accepted this challenge willingly.

It is recommended that an Infantry Division be allowed the full T/O strength in officers. The following list contains the minimum number of officers which should be restored to the T/O in the event the full T/O is not allowed:

Division Headquarters - 3 Capt. Assistants for the G-2 and G-3 Sections, 1 Lt. Postal Officer.

QM Co - 1 Lt. Platoon Leader.

Signal Co - 1 Lt.,Message Center.

Div. Arty. Hq. - 1 Capt. Liaison

AA AW Bn Hq. - 1 Capt. Adjutant

AA AW Btrys - 2 Lts. each

Engineer Bn. Hq. - 1 Capt. and 3 Lts. (Adjutant, Assistant S-2, Assistant S-4 Liaison Officer).

Engineer Co. - 1 Platoon Leader

155 MM FA Firing Btrys - 1 Lt. each.

105 MM FA Btrys - 1 Lt. each Firing Btry.

Infantry Bn. Hq. - 1 Capt. Adjutant and 1 Lt. Motor Officer.

Infantry Tank Co. - 2 Lts. Platoon Leaders.

Tank Bn. Hq. - 1 Capt. Adjutant

Tank Bn. Companies - 2 Platoon Leaders each.

Appendix C: Interview Records

Interview Record

Project:	Military Munitions Response Program - Site Inspection
Site:	Fort Jackson, SC
Contract No.:	DACW41-02-D-0003
Delivery Order:	DA02
Date:	16 June 2004
Interview By:	Susan Burtnett/Leigh Blake
Person Interviewed:	Mark Dutton, Natural Resource Specialist Fort Jackson Wildlife Office

Discussion:

Mark Dutton provided information regarding cultural resources at Fort Jackson. He provided GIS maps showing archeological/cultural resource sites (both eligible and ineligible sites).

The maps showed cemeteries located at the installation. Other than a cemetery located north of the Hand Grenade Court No. 2 and the Rifle Grenade Range NR2 in the Weston Lake Area (on the east side of Washington Light Infantry Road), no cultural resources were identified in the other that operational areas evaluated as part of the HRR.

Duded areas were also shown on the maps. These areas are noted so the natural resource staff were aware of the areas at the installation where they are not allowed to enter due to the potential to encounter UXO.

In the Cantonment Area, the area adjacent to Chestnut Road was not surveyed because it was determined to be too disturbed to do a routine cultural resources survey. The forested areas in the Cantonment Area (i.e., the areas where the 600-Yard, 1000-Yard and Machine Gun Ranges and Live Hand Grenade Court 2 are located) have been surveyed. Mark noted that everything east of Chestnut Road has been surveyed, except for areas were structures have been constructed and an irregular shaped area south/southeast of Hilton Field that was shown as duded on an archeological inventory map dated 1990. (Note: this area is not shown as duded on any other maps reviewed.)

The majority of the area near and including Fort Jackson Flight Club (FJFC) was surveyed, with the exception of the duded area adjacent to and east of the FJFC. No potentially eligible or eligible sites were found (surveyed).

The Weston Lake Area, including the areas where the CTT sites (the Mortar Range, Submachine Gun Area, and Hand Grenade Court No 2) are located, has been surveyed. The only cultural resource site identified was the Brazelle cemetery located north of the Rifle Grenade Range NR2. The Rifle Grenade Range NR2 was not surveyed because it is shown as duded on installation maps. The installation maps actually show 3 separate duded areas identified as Rifle Grenade/Hand Grenade/Rifle Grenade in this area.

Interview Record

Project:	Military Munitions Response Program - Site Inspection
Site:	Fort Jackson, SC
Contract No.:	DACW41-02-D-0003
Delivery Order:	DA02
Date:	16 June 2004
Interview Made By:	Susan Burtnett/Leigh Blake
Person Interviewed:	Lahiri Estaba, IRP Manager Fort Jackson Environmental Department

Discussion:

Lahiri Estaba provided information regarding Fort Jackson's Installation Restoration Program (IRP) and the sites located near the MMRP ranges/sites where environmental investigations (soil/groundwater sampling) have been conducted. He also provided copies of relevant IRP documents for the team's use.

SWMU 1 (Sanitary Landfill No. 3) and SWMU 34 (Building 2183, Vehicle Wash Pad and Oil Water Separator) are located east/northeast of the Cantonment Area MMRP sites/ranges. In addition, background soil (surface and near-surface) samples were collected near this area. B-6 was obtained approximately ½ mile north of the 1000-Yard Range along Chestnut Road and B-5 was obtained approximately ½ mile south of the 1000-Yard Range.

There are no IRP sites near the FJFC (nothing within at least 5 miles).

SWMU 17 (Inchon OB/OD) is located approximately 5 miles east of the Mortar Range and Submachine Gun Area. Two phases of RFI have been completed and conditional approval has been received from the State. Mr. Estaba noted that the reports have good general soils and groundwater information.

SWMU 21 (Inactive Range 17 Landfill) is also located approximately 5 miles east of the Mortar Range and Submachine Gun Area. Groundwater monitoring has been conducted at this site.

There are no IRP sites west of Weston Lake (i.e., nothing near the Hand Grenade Court No. 2 and Rifle Grenade Range NR2).

Interview Record

Project:	Military Munitions Response Program - Site Inspection
Site:	Fort Jackson, SC
Contract No.:	DACW41-02-D-0003
Delivery Order:	DA02
Date:	June 16, 2004
Interview Made By:	Susan Burtnett/Leigh Blake
Person Interviewed:	John Maitland, Lead Forester Fort Jackson Forestry Office

Discussion:

Mr. Maitland was familiar with the areas where the MMRP sites/ranges are located, especially the sites west of the Weston Lake Area. He provided historical aerial photographs of the different sections of the installation where the MMRP sites/ranges are located (from the Forestry Office aerial photograph collection). During a follow-up site visit in July, relevant portions of the aerial photographs were copied and they served as a primary source of site-specific information for the HRR.

The area east/southeast of the Cantonment Area sites/ranges has been logged and replanted with pines at least once in the past.

Recently, slash pines have been planted at and east/southeast of the FJFC.

The sites/ranges located west of Weston Lake (the Hand Grenade Court No. 2 and Rifle Grenade Range NR2) have been surface cleared. Recently, the Rifle Grenade Range NR2 was logged (the area south of the cemetery was logged).

Mr. Maitland noted that there were inconsistencies in how the hand grenade and rifle grenade ranges are shown on the installation maps over the years. The team talked with him about the different ways the ranges are shown. The CTT Inventory identified one range (Rifle Grenade Range NR2), but the previous installation maps show three separate ranges in this area.

The CTT Inventory map shows the Hand Grenade Court No. 2 by Fire Break 12. Mr. Maitland did not remember anything in that area. He noted that is has been logged twice. Slash pine has been planted (Slash pine plantation in the 1970s) and the soil has been significantly disturbed down to at least one foot. This is also the case at the Rifle Grenade Range NR2 where logging has taken place.

Based on review of the aerials, it doesn't look like there was any range activity north of Fire Break 9. The area north of Fire Break 9 has been planted with slash pine, as well.

Interview Record

Project:	Military Munitions Response Program - Site Inspection
Site:	Fort Jackson, SC
Contract No.:	DACW41-02-D-0003
Delivery Order:	DA02
Date:	17 June 2004
Interview Made By:	Susan Burtnett/Leigh Blake
Person Interviewed:	SSGT Mark Wood Fort Jackson Range Control

Discussion:

SSGT Wood escorted the data collection team during a limited visual survey of several of the ranges. These included:

- Fort Jackson Flight Club (FJFC)
- Hand Grenade Court No. 2
- Rifle Grenade Range NR2

SSGT Wood provided general descriptions of current uses in the vicinity of these ranges. He noted that the FJFC is used by a club for flying remote controlled model airplanes. The area near the Rifle Grenade Range NR2 has Red Cockaded Woodpecker habitat. He did not have knowledge of historical range use since he has been at Fort Jackson for only the last 3 years.

Interview Record

Project:	Military Munitions Response Program - Site Inspection
Site:	Fort Jackson, SC
Contract No.:	DACW41-02-D-0003
Delivery Order:	DA02
Date:	18 June 2004
Interview By:	Susan Burtnett/Leigh Blake
Person Interviewed:	Jim McCracken, NEPA Coordinator Fort Jackson Environmental Department

Discussion:

Jim McCracken provided information regarding the past use of other than operational ranges in the Cantonment Area, the Fort Jackson Flight Club, and the Weston Lake Area.

Cantonment Area
The ranges used during the time period when the installation was Camp Jackson were discussed. These included the 1000-Yard, 600-Yard, 300-Yard, and Machine Gun Ranges. Mr. McCracken noted that the Baseball Field and Soccer Field were constructed in the area where these ranges were located in approximately 1980. The elementary school was constructed later.

Fort Jackson Flight Club (FJFC)
There were several ranges that existed in the area of the FJFC. In addition to the machine gun range, there was a 40mm range north of the area currently used by the FJFC.

Weston Lake Area
The Mortar Range, Submachine Gun Area, Rifle Grenade Range NR2, and Hand Grenade Court No. 2 were discussed. The team noted that the Rifle Grenade Range NR2 is shown differently depending on the map reviewed.

Mr. McCracken noted that there was a long wall located behind the commissary, behind the officer housing area, that he had been told may have been used as a range. Note: the team walked this area on a return site visit in July. The team walked along the wall and noted no bullet holes in the concrete or other visual signs of use as a range. The team did note that the area east of the wall was planted with bamboo at some time in the past. The bamboo plants were well established.

Mr. McCracken provided the data collection team with a map showing the Cantonment Area (Cantonment Area, Fort Jackson, SC, Sheet 1 of 3, September 1945, Army Map SVC, War Department). He also noted that an area located south of Hilton Field was shown on a 1990 map, but this area was not identified on any other maps.

Interview Record

Project:	Military Munitions Response Program - Site Inspection
Site:	Fort Jackson, SC
Contract No.:	DACW41-02-D-0003
Delivery Order:	DA02
Date:	18 June 2004
Interview By:	Susan Burtnett/Leigh Blake
Person Interviewed:	Jim Wyatt, Range Control Officer Fort Jackson Range Control

Discussion:

Mr. Wyatt provided maps and other documents (including range sketches) regarding the MMRP ranges/sites. The team discussed the historical range uses and range locations in the following areas:

Cantonment Area:
Mr. Wyatt noted that the area where the Live Hand Grenade Court 2 is located was used for Field Fortification training in the 1970s and 1980s. As such, the area has been significantly disturbed since its use as a hand grenade court.

The team discussed the 300-Yard Range that was identified on archival documents obtained as part of the HRR. Mr. Wyatt agreed that this appears to be an additional range used in the Cantonment Area in the early 1900s.

FJFC:
Mr. Wyatt provided information regarding use of this area as the Saint Lo Range and Salerno Range. The Saint Lo Range was used in 1965 as a combat indoctrination (C/I) range, not as a machine gun range. Later it was converted to the machine gun range. The Salerno Demonstration Range was depicted on a range sketch provided by Mr. Wyatt.

Weston Lake Area:
Mr. Wyatt agreed with the team that the Hand Grenade Court No. 2 and Rifle Grenade Range NR2 are inconsistently shown on installation maps. Review of historical maps and aerial photographs with Mr. Wyatt indicated that hand and rifle grenade use occurred east of Washington Light Infantry Road in the areas where these sites are located.

Historical photographs were reviewed by Mr. Wyatt. Mr. Wyatt noted that he was at Fort Jackson from 1956 – 1966.

He noted that in 1958 training at the installation was moved north so it was centrally located. Everything to the east was closed and the direction of fire was directed that way.

Interview Record

Project:	Military Munitions Response Program - Site Inspection
Site:	Fort Jackson, SC
Contract No.:	DACW41-02-D-0003
Delivery Order:	DA02
Date:	28 July 2004
Call Made By:	Leigh Blake
Person Called:	Jim Murphy (803) 751-5614 Fort Jackson Engineering Office

Discussion:

During a telephone conversation, Leigh Blake spoke to Jim Murphy about the 1957 Basic Information for Master Plan, Range, and Training Areas Map (June 1, 1957) that he provided to the team during the Phase 3 CTT Inventory data collection site visit. The map legend on the copy of the map that the data collection team had obtained is faded in several areas. We needed clarification on the missing information for the HRR. Mr. Murphy stated that he would look for the map to see if he could find a better copy.

Note: Ms. Blake followed up with a call to the Fort Jackson Museum (Ms. Bessie Williams and Mr. Fred DeMag) where she was able to obtain the missing information by telephone as museum personnel looked at the copy of the map and helped interpret/convey the missing information. Ms. Williams and Mr. DeMag were also helpful during the site visit in providing historical documents and maps for review while the team was at the Fort Jackson Museum.

Interview Record

Project:	Military Munitions Response Program - Site Inspection
Site:	Fort Jackson, SC
Contract No.:	DACW41-02-D-0003
Delivery Order:	DA02
Date:	30 July 2004
Call Made By:	Leigh Blake
Person Called:	Tom Peel (803) 751-7261 Fort Jackson Real Property Office

Discussion:

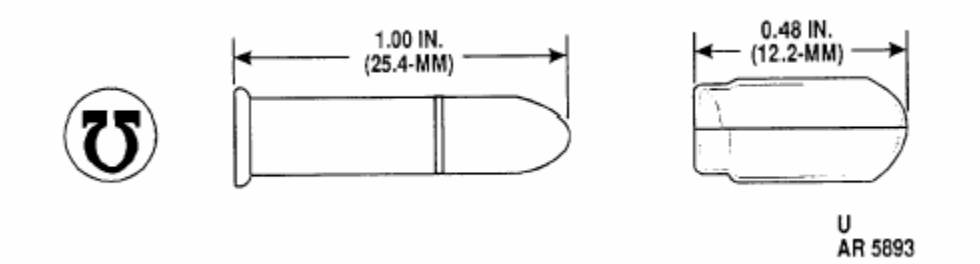
During a telephone conversation, Leigh Blake spoke to Tom Peel about Real Property records for range use and range closure dates. Mr. Peel stated that Leigh would need to speak with Jim Wyatt at Range Control for that information. He stated that he did not have information on ranges.

Mr. Peel noted that there have been no property boundary changes associated with the team's area of interest.

Appendix D: Munitions Technical Data Sheets

Ordnance Technical Data Sheet

.22 Caliber Small Arms



Nomenclature: .22 Caliber Small Arms Ammunition
Ordnance Family: Small Arms
DODIC: A086
Filler: None
Filler weight: None
Item weight: 416 g (416 grain)
Diameter: 5.58 mm (.22 in)
Length: 25.40 mm (1 in)

Usage: Sub-caliber Rifle M2A1; Caliber .22 Rifle; Remington Models 40X and M513T; Steven's Model 416-2; Winchester Models 52 and 75; Machine Gun Trainers M3 and M4; pistols for gallery practice and training purposes. The cartridge is intended for use against small game for survival purposes.

Description: BALL Cartridge. The cartridge is identified by a plain bullet tip.

Reference: Army Technical Manual, TM 43-0001-27

Ordnance Technical Data Sheet

U.S. Carbine Cartridge, .30 Caliber, Ball

Nomenclature: U.S. Carbine Cartridge, .30 Caliber, Ball
Ordnance Family: Small Arms
DODIC: Not Provided
Filler: None
Filler weight: None
Item Weight: Not Provided
Diameter: 7.62 mm (.30 in)
Length: 42.67 mm (1.68 in)

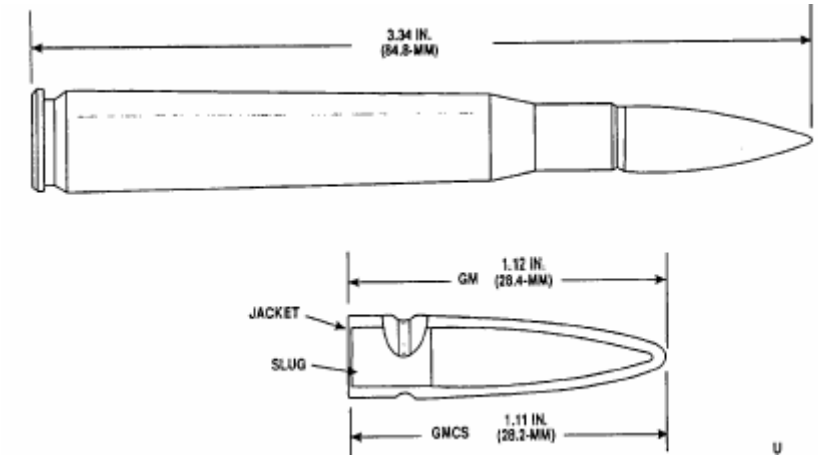
Usage: Standard general purpose small arms ammunition for the M-1 and M1A1 Carbine. The maximum range is 2,012 meters or 2,200 yards.

Description: BALL Cartridge. Ball ammunition is unpainted; tracer ammunition has the tip painted either orange or red.

Reference: Army Technical Manual, TM-9-1300-200.

Ordnance Technical Data Sheet

.30 Caliber Small Arms



Nomenclature:	.30 Caliber Small Arms Ammunition
Ordnance Family:	Small Arms
DODIC:	A212
Filler:	None
Filler weight:	None
Item weight:	26.96 g (416 grains)
Diameter:	7.62 mm (.30 in)
Length:	84.80 mm (3.34 in)

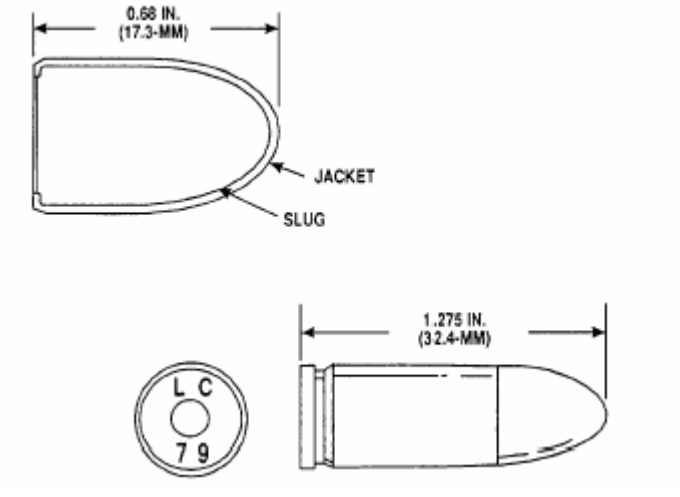
Usage: Machine Guns, Caliber .30, M37, M1919A4 and M1919A6; Rifle, Caliber .30, M1. The cartridge is intended for use against personnel or unarmored targets.

Description: BALL Cartridge. The cartridge is identified by a plain bullet tip.

Reference: Army Technical Manual, TM 43-0001-27

Ordnance Technical Data Sheet

Cartridge Ball .45 Caliber M1911



Nomenclature:	Cartridge Ball .45 Caliber M1911
Ordnance Family:	Small Arms
DODIC:	Not Provided
Filler:	None
Filler weight:	None
Item weight:	332 gr (11.32 oz)
Diameter:	11.43 mm (.45 in)
Length:	32.4 mm (1.275 in)

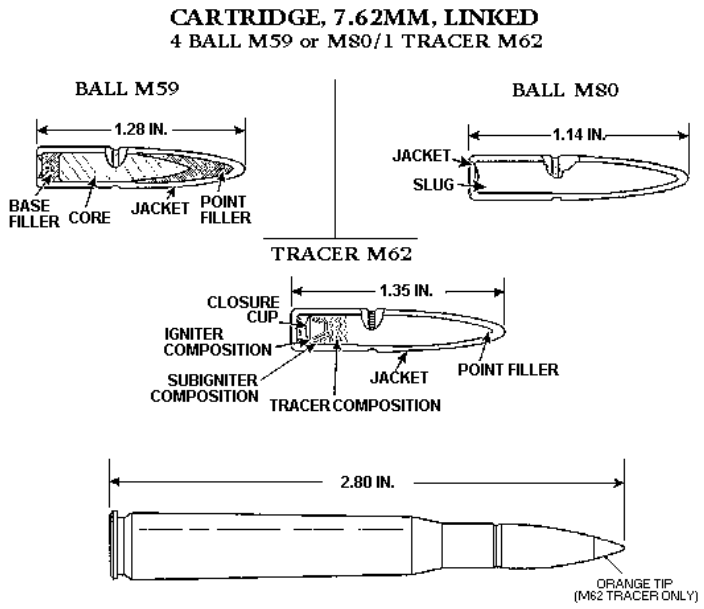
Usage: Submachine Gun, Caliber .45 M3A1; Pistol Caliber .45, M1911A1. The cartridge is intended for use against personnel.

Description: BALL Cartridge. The cartridge is identified by a plain bullet tip.

Reference: Army Technical Manual, TM-0001-27

Ordnance Technical Data Sheet

7.62MM Small Arms



Nomenclature:	7.62MM Small Arms Ammunition
Ordnance Family:	Small Arms
DODIC:	A138
Filler:	None
Filler weight:	None
Item weight:	376.5 g (13.2 oz)
Diameter:	7.62 mm (.3085 in)
Length:	71.12 mm (2.80in)

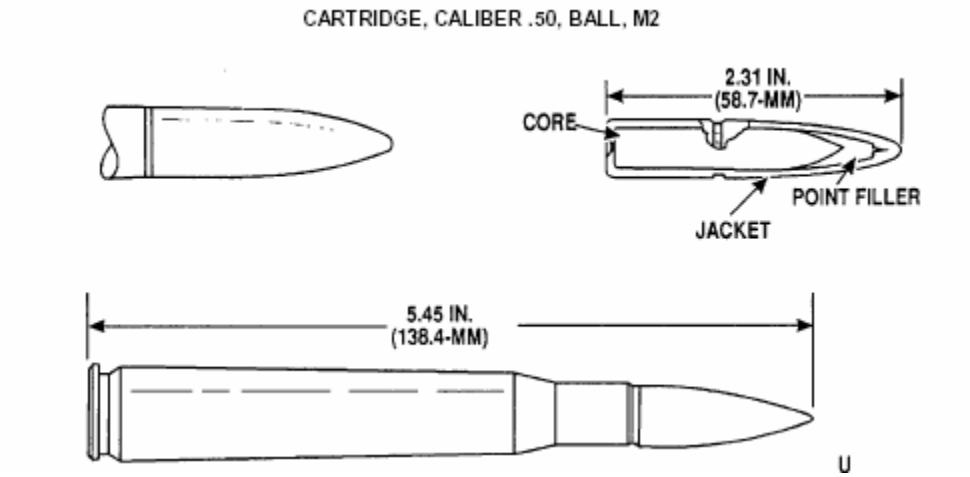
Usage: This cartridge is intended for use against personnel and unarmored targets.

Description: Full metal jacketed bullet and brass cartridge case. Center fired NATO standard small arms.

Reference: ORDATA Online; MIDAS; Army Technical Manual, TM-9-1306-200

Ordnance Technical Data Sheet

.50 Caliber Small Arms



Nomenclature:	.50 Caliber Small Arms Ammunition
Ordnance Family:	Small Arms
DODIC:	A552
Filler:	None
Filler weight:	None
Item weight:	117.50 g (.25 lb)
Diameter:	12.70 mm (.50 in)
Length:	138.40 mm (5.45 in)

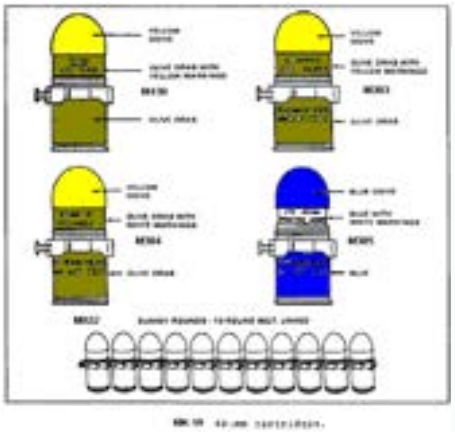
Usage: Machine Guns, Caliber .50, M2 and M85. The cartridge is intended for use against personnel or unarmored targets.

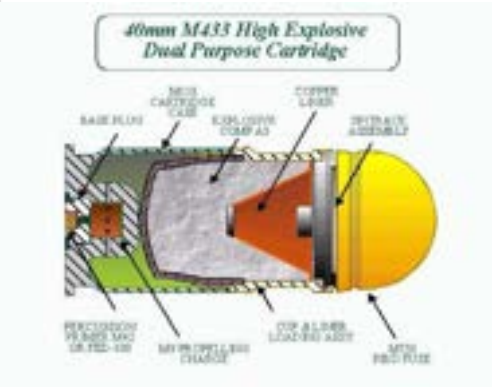
Description: BALL Cartridge. The cartridge is identified by a plain bullet tip.

Reference: Army Technical Manual, TM 43-0001-27

Ordnance Technical Data Sheet

40MM Grenade





Nomenclature: 40MM Grenade
Ordnance Family: Projectile
DODIC: B564
Filler: Explosive Composition A5
Filler weight: ± 57.00 g (2.011 oz)
Item weight: 340 g (11.99 oz)
Diameter: 40 mm (1.57 in)
Length: 79 mm (3.11 in)
Maximum Range: 400 m (437 yds)
Fuze: M550 (Impact Fuze)

Usage: Light Support Weapon. Providing capability for anti-personnel, anti-vehicle, anti-material, and training depending on type of round selected.

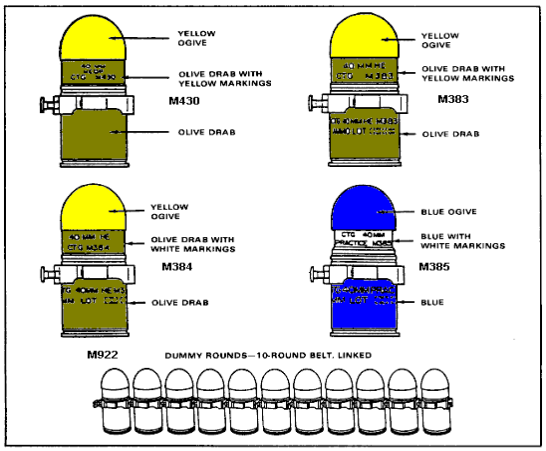
Description: The projectiles are olive drab with anodized gold ogives. The M383 has white markings; the M384 and M677 have yellow markings.

Filler Description: Composition A is a wax coated, granular explosive consisting of TDX and plasticizer wax. It is normally used as a bursting charge.

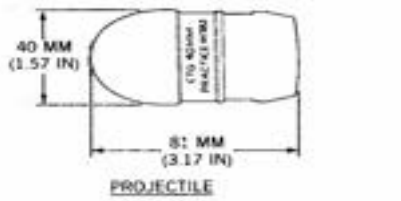
Reference: ORDATA Online

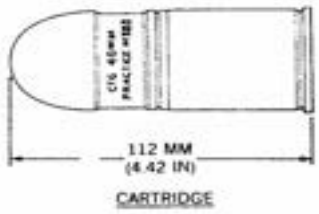
Ordnance Technical Data Sheet

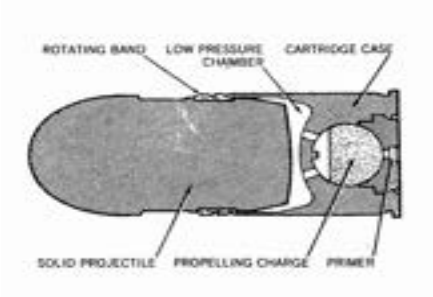
40MM Grenade Practice



MK-19 40-mm cartridges.







Nomenclature:	40MM Grenade Practice
Ordnance Family:	Projectile
DODIC:	B564
Filler:	None
Filler weight:	None
Item weight:	340 g (11.99 oz)
Diameter:	40 mm (1.57 in)
Length:	79 mm (3.11 in)
Range:	50 – 400 m (164 – 1312 ft)
Maximum Range:	400 m (437 yds)
Fuze:	None

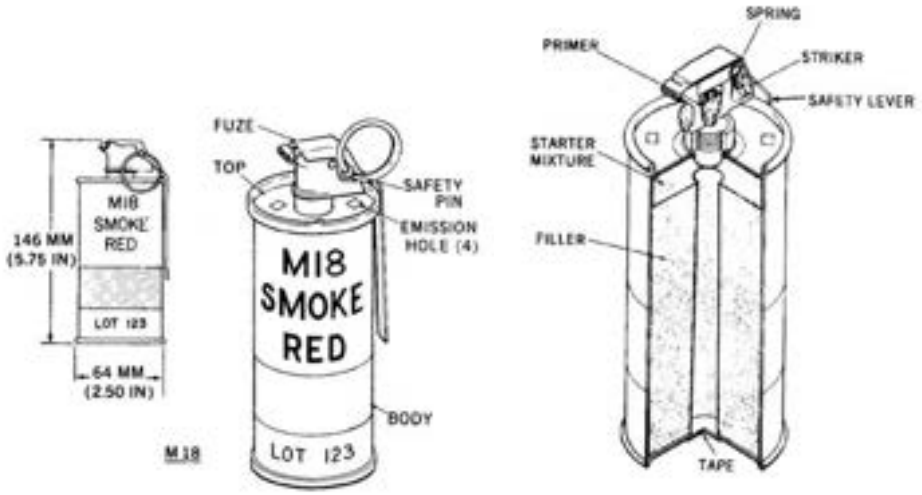
Usage: Light Support Weapon; In-service Training/Familiarization.

Description: The projectile is anodized blue with black markings.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Grenade, Hand, Smoke, M18



Nomenclature:	U.S. Grenade, Hand, Smoke, M18
Ordnance Family:	Grenades
DODIC:	G955
Filler:	Smoke Mix, Colored
Filler weight:	326.03 g (11.5 oz)
Item weight:	539.00 g (19.01 oz)
Diameter:	64.00 mm (2.52 in)
Length:	146.00 mm (5.748 in)
Maximum Range:	Not Provided
Fuze:	Pyrotechnic, delay-igniting fuze (2 second delay)

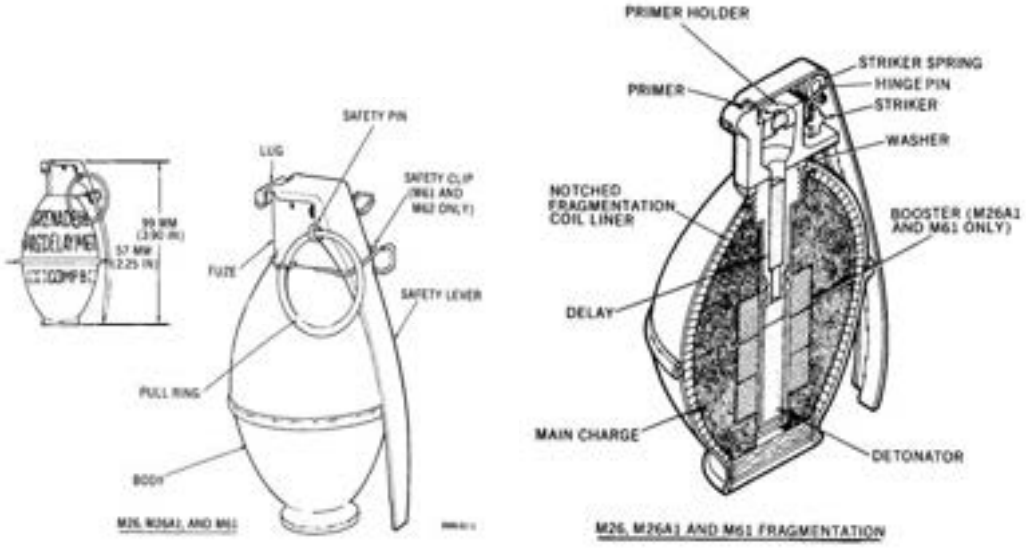
Usage: The M18 is a hand-thrown smoke grenade that emits red, yellow, or violet smoke for 50 to 90 seconds. The M18 may also emit green smoke. These grenades use a pyrotechnic, delay-igniting fuze that provides an approximate 2 second delay.

Description: The M18 grenade may be olive drab with a light green band around the lower body and nomenclature and smoke color stenciled in light green, or light green and stenciled with the color of the smoke. The top of the grenade is painted the color of the smoke.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Grenade, Hand, Frag, M26, M26A1, M61



Nomenclature:	Hand Grenade, Frag, M26, M26A1, and M61
Ordnance Family:	Grenades
DODIC:	G890
Filler:	Composition B
Filler weight:	164.43 g (5.8 oz)
Item weight:	453.60 g (15.98 oz)
Diameter:	57.00 mm (2.52 in)
Length:	99.00 mm (3.187 in)
Maximum Range:	40.00 m (43.7 yds)
Fuze:	Powder train time delay

Usage: The M26, M26A1, and M61 are fragmentation (frag), antipersonnel, delay-detonating hand grenades that have a notched fragmentation coil liner.

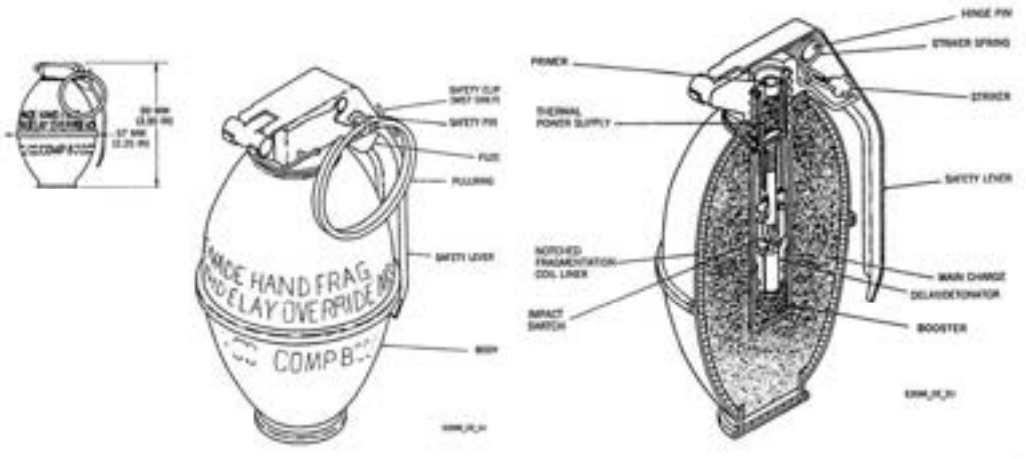
Description: The M26, M26A1, and M61 grenades are painted olive drab, with yellow markings stenciled on the body.

Filler (Main Charge) Description: Composition B consists of a mixture of TNT (trinitrotoluene) and RDX (cyclotrimethylenetrinitramine, cyclonite, and hexogen). It is used as a burster in Army projectiles, rockets, hand grenades, and landmines.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Grenade, Hand, Frag, M26A2, M57



Nomenclature:	U.S. Grenade, Hand, Frag, M26A2 and M57
Ordnance Family:	Grenades
DODIC:	Not Provided
Filler:	Composition B
Filler weight:	155.93 g (5.5 oz)
Item weight:	454.00 g (16.01 oz)
Diameter:	57.00 mm (2.244 in)
Length:	99.00 mm (3.898 in)
Maximum Range:	40.00 mm (43.7 yds)
Fuze:	Powder Train Time-delay

Usage: These are fragmentation (frag), antipersonnel, delay-detonating, impact-actuated hand grenades that have a notched fragmentation coil liner.

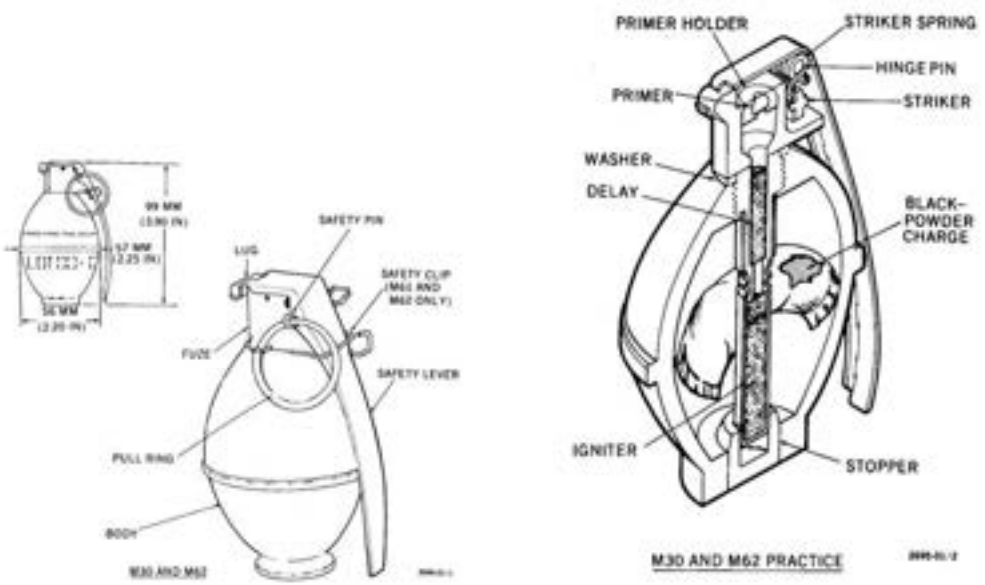
Description: The grenade is olive drab with markings stenciled in yellow. The safety lever is red. The word "IMPACT" is embossed on newer models and may or may not be stenciled in black on older models.

Filler (Main Charge) Description: Composition B consists of a mixture of TNT (trinitrotoluene) and RDX (cyclotrimethylenetrinitramine, cyclonite, and hexogen). It is used as a burster in Army projectiles, rockets, hand grenades, and landmines.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Grenade, Practice, M30 and M62



Nomenclature:	U.S. Grenade, Practice, M30 and M62
Ordnance Family:	Grenades
DODIC:	G810
Filler:	Black Powder (Witness Charge Only)
Filler weight:	1.00 g (.03527 oz)
Item weight:	454.00 g (16.01 oz)
Diameter:	57.00 mm (2.244 in)
Length:	99.00 mm (3.898 in)
Maximum Range:	40.00 mm (43.7 yds)
Fuze:	Powder Train Time-delay

Usage: The M30 and M62 are standard, practice, delay-detonating hand grenades. The M30 is the practice version of the M26 and M26A1 grenades; the M62 is the practice version of the M61 grenade.

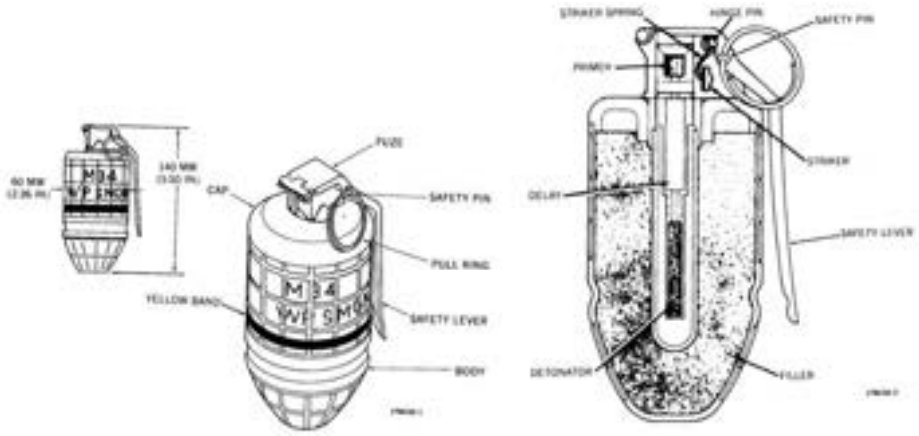
Description: The M30 and M62 grenades are blue, with a brown band around the body or neck. Markings, if any, are stenciled in white.

Filler (Witness Charge) Description: Black powder is a low explosive composed of potassium nitrate or sodium nitrate, charcoal, and sulfur. It is very sensitive to heat, friction, or spark. It was used in safety fuses and practice munitions. It is no longer used as a propellant or bursting charge.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Grenade, Hand, Smoke, WP, M34



Nomenclature:	U.S. Grenade, Hand, Smoke, WP, M34
Ordnance Family:	Grenades
DODIC:	G937
Filler:	Smoke Mix (White Phosphorus)
Filler weight:	425.25 g (15 oz)
Item weight:	680.00 g (23.99 oz)
Diameter:	60.00 mm (2.362 in)
Length:	140.00 mm (5.512 in)
Maximum Range:	Not Provided
Fuze:	Powder Train Time-delay

Usage: This is a hand-thrown, bursting, smoke-producing grenade. It may also be launched by ground or by airborne grenade launchers.

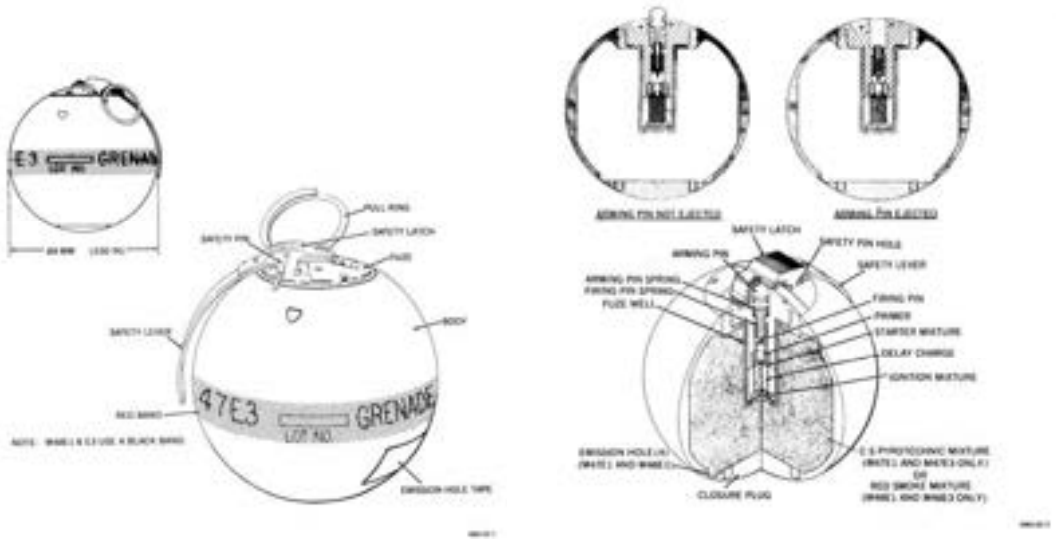
Description: The grenade is painted light green or gray, with one yellow band around the circumference. Nomenclature is stenciled in light red or yellow. The fuze is olive drab with black markings.

Filler Description: White phosphorus (WP) is a white to light yellow, wax-like, luminous substance (phosphorescent in the dark). On ignition, it produces a yellow-white flame and dense white smoke. When dispersed by ammunition as small particles, it ignites spontaneously on exposure to air and continues to burn on contact with solid materials, even when embedded in human flesh. It is used in bursting-type projectiles, artillery and mortar shells, grenades, rockets, and bombs.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Grenade, Hand, Red Smoke, M48E1 (Obsolete) and M48E3



Nomenclature:	U.S. Grenade, Hand, Red Smoke, M48E1 and M48E3
Ordnance Family:	Grenades
DODIC:	G932
Filler:	Smoke, Red/Pyrotechnic Mix
Filler weight:	142.00 g (5.009 oz)
Item weight:	390.00 g (13.76 oz)
Diameter:	89.00 mm (3.504 in)
Length:	Not provided
Maximum Range:	Not provided
Fuze:	Powder Train Time-delay

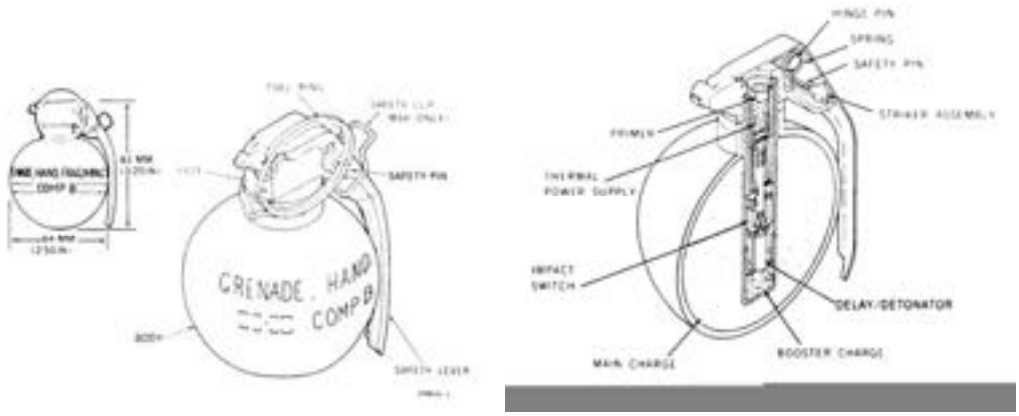
Usage: The M48E1 and M48E3 produce a red-smoke cloud used for training. These are the training grenades for the M47E1 and M47E3.

Description: The M48E1 and M48E3 are painted light green, with a black band and markings stenciled in black.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Grenade, Hand, Frag, M59 and M68



Nomenclature:	U.S. Grenade, Hand, Frag, M59 and M68
Ordnance Family:	Grenades
DODIC:	G882
Filler:	Composition B
Filler weight:	198.45 g (7 oz)
Item weight:	397.00 g (14 oz)
Diameter:	64.00 mm (2.52 in)
Length:	81.00 mm (3.198 in)
Maximum Range:	Not Provided
Fuze:	Powder Train Time-delay

Usage: These are fragmentation (frag), antipersonnel, impact-activated hand grenades. They use the M217 fuze with a self-destruct delay-detonating feature.

Description: The grenades are olive drab, with markings stenciled in yellow. The fuzes are olive drab with black stenciling.

Filler (Main Charge) Description: Composition B consists of a mixture of TNT (trinitrotoluene) and RDX (cyclotrimethylenetrinitramine, cyclonite, and hexogen). It is used as a burster in Army projectiles, rockets, hand grenades, and landmines.

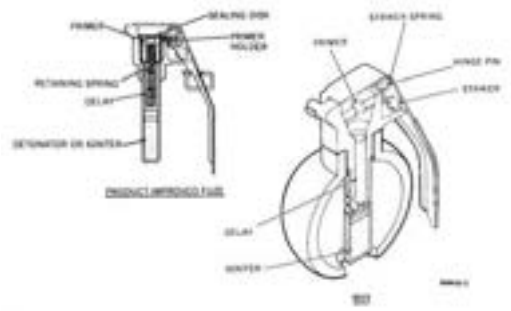
Ordnance Technical Data Sheet

U.S. Grenades, Hand, Practice, M69



Nomenclature: U.S. Grenades, Hand, Practice, M69
Ordnance Family: Grenades
DODIC: G918
Filler: None
Filler weight: None
Item weight: 397.00 g (13.37 oz)
Diameter: 64.00 mm (2.52 in)
Length: 90.00 mm (3.543 in)
Maximum Range: Not Provided
Fuze: Powder Train Time-delay

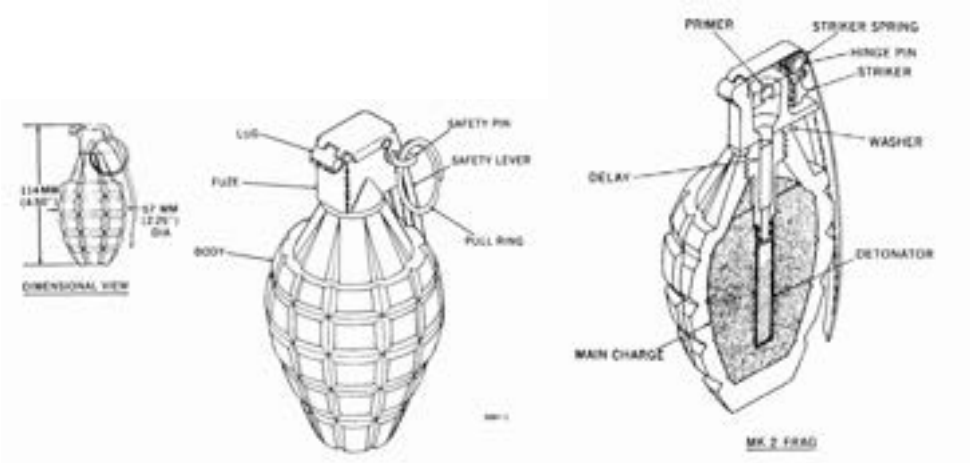
Usage: The M69 is a standard-delay practice version of the M33 and M67 grenades. The M33 and M67 are fragmentation (frag), antipersonnel (apers), delay-detonating hand grenades.

Description: The M69 is blue with a brown band around the body or neck.

Reference: ORDATA Online

Ordnance Technical Data Sheet

MK 2 Grenade, Hand, Antipersonnel



Nomenclature:	MK 2 Grenade, Hand, Antipersonnel
Ordnance Family:	Grenade
DODIC:	G890
Filler:	Flaked TNT
Filler weight:	± 56.70 g (2 oz)
Item weight:	589.68 g (1.3 lbs)
Diameter:	57.00 mm (2.244 in)
Length:	114.00 mm (4.88 in)
Maximum Range:	10.00 m (10.44 yds)
Fuze:	Not Provided

Usage: Fragmentation (frag), antipersonnel, delay-detonating hand grenade.

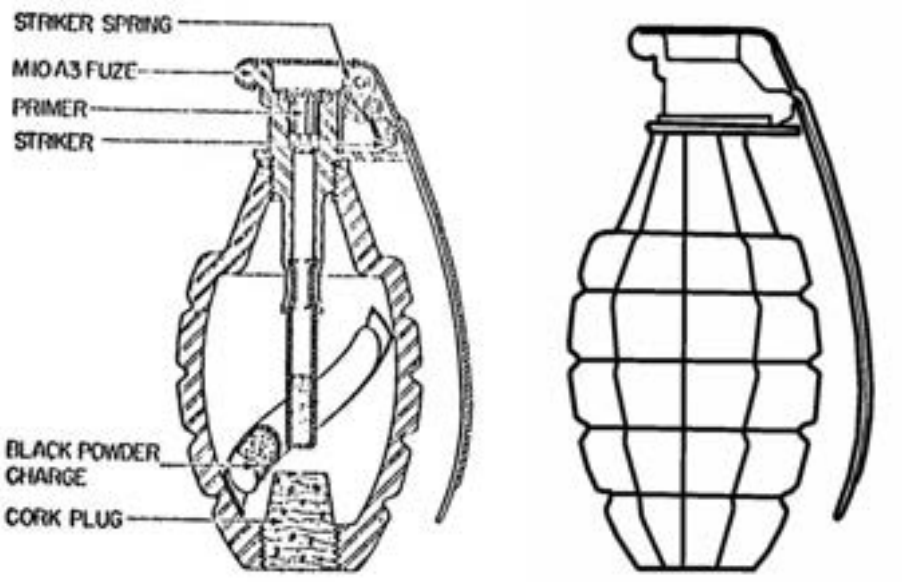
Description: The MK 2 grenade is painted olive drab, with a yellow band around the top of the fuze well. The grenade is referred to as the "Pineapple" because its shape and external serrations resemble a pineapple.

Filler Description: TNT (2, 4, 6-trinitrotoluene), in a pure state, is crystalline and nearly white, resembling a light brown sugar. In a refined form, it is one of the most stable high explosives. It is also used as a constituent of other explosives, including Amatol, Pentolite, Tetrytol, Tritonal, Picratol, and Composition B.

Reference: ORDATA Online, Army Field Manual FM 3-23.30

Ordnance Technical Data Sheet

U.S. Grenade, Practice, MK II (2)



Nomenclature:	U.S. Grenade, Practice, MK II (2)
Ordnance Family:	Grenades
DODIC:	G915
Filler:	Black Powder (Witness Charge Only)
Filler weight:	28.35 g (1 oz)
Item weight:	580.61 g (20.48 oz)
Diameter:	57.17 mm (2.25 in)
Length:	114.30 mm (4.5 in)
Maximum Range:	Not Provided
Fuze:	Powder Train Time-delay

Usage: This grenade consists of a fragmentation body with a filing hole in the base, an Igniting Fuze M206, a small charge of black powder, and a cork plug that is placed in the filling hole. Extra fuzes, charges, and plugs are supplied separately, so that the grenade body can be reused.

Description: The body is light blue.

Filler (Witness Charge) Description: Black powder is a low explosive composed of potassium nitrate or sodium nitrate, charcoal, and sulfur. It is very sensitive to heat, friction, or spark. It was used in safety fuses and practice munitions. It is no longer used as a propellant or bursting charge.

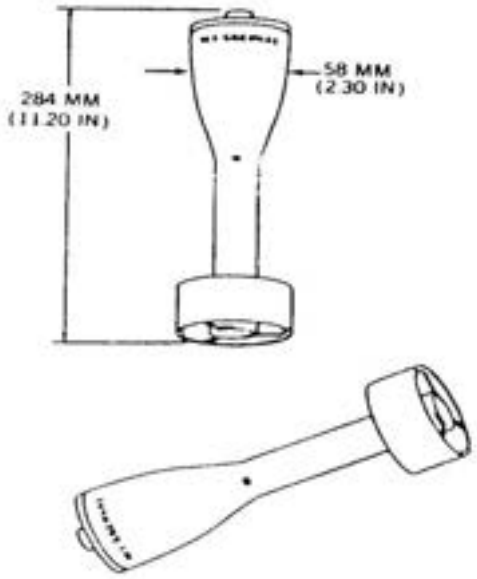
Ordnance Technical Data Sheet

U.S. Grenade, Rifle, M9



Nomenclature:	U.S. Grenade, Rifle, M9
Ordnance Family:	Grenades
DODIC:	Obsolete
Filler:	TNT
Filler weight:	113.40 g (4 oz)
Item weight:	557.00 g (19.68 oz)
Diameter:	58.00 mm (2.283 in)
Length:	284.00 mm (11.18 in)
Maximum Range:	Not Provided
Fuze:	Point-detonating Fuze

Usage: The M9 is an earlier model of the M9A1. It has the same tail assembly, but the head is acorn-shaped and equipped with a point-detonating fuze. The shrouded fin assembly aids in stabilization. It is slightly less sensitive than the M9A1. The safety pin of the M9 is located in the base of the grenade body instead of in the stabilizer tube. The pull ring is secured to the body with adhesive tape.

Description: The grenade is painted olive drab.

Filler (Main Charge) Description: TNT (2, 4, 6-trinitrotoluene), in a pure state, is crystalline and nearly white, resembling a light brown sugar. In a refined form, it is one of the most stable high explosives. It is also used as a constituent of other explosives, including Amatol, Pentolite, Tetrytol, Tritonal, Picratol, and Composition B.

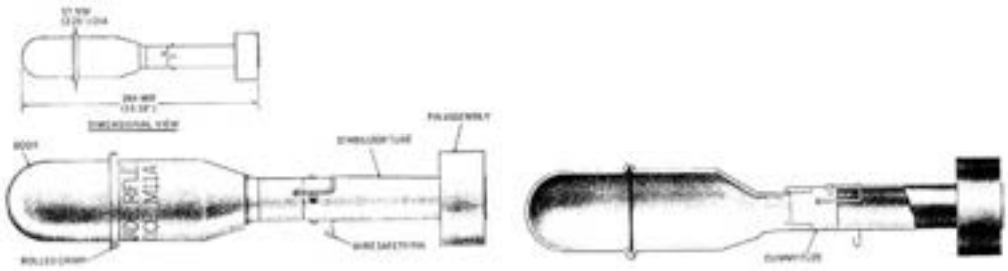
Ordnance Technical Data Sheet

U.S. Grenade, Practice, Inert, M11 Series



Nomenclature: U.S. Grenade, Practice, Inert, M11 Series
Ordnance Family: Grenades
DODIC: G980
Filler: None
Filler weight: None
Item weight: 558.00 g (19.68 oz)
Diameter: 57.00 mm (2.244 in)
Length: 284.00 mm (11.18 in)
Maximum Range: Not Provided
Fuze: N/A

Usage: Rifle-projected grenades, except for the M11 Series, contain a simple impact inertia, base detonating fuze. The M11 Series practice grenade contains a dummy fuze that only has a safety pin hole.

Description: The grenades are painted blue or black, with white markings.

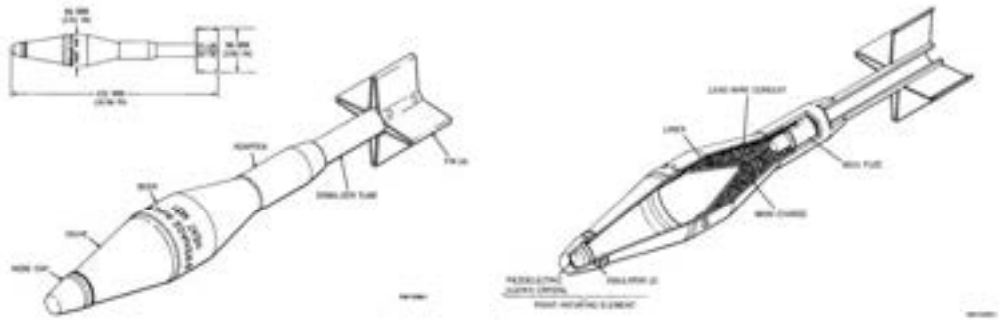
U.S. Grenade, Rifle, HEAT, M31



Nomenclature:	U.S. Grenade, Rifle, HEAT, M31
Ordnance Family:	Grenades
DODIC:	G970
Filler:	Composition B
Filler weight:	280.67 g (9.9 oz)
Item weight:	708.00 g (24.97 oz)
Diameter:	66.00 mm (2.598 in)
Length:	431.00 mm (16.97 in)
Maximum Range:	200 m (218.7 yds)
Fuze:	Point-initiating Base-detonating Fuze, M211

Usage: This is a fin-stabilized high-explosive antitank rifle grenade that has an integral setback-armed, point-initiating base-detonating fuze (M211) that contains a piezoelectric crystal and an electric detonator.

Description: The grenade is painted olive drab and the markings are in yellow. The practice version is painted blue with white markings.

Filler (Main Charge) Description: Composition B consists of a mixture of TNT (trinitrotoluene) and RDX (cyclotrimethylenetrinitramine, cyclonite, and hexogen). It is used as a burster in Army projectiles, rockets, hand grenades, and landmines.

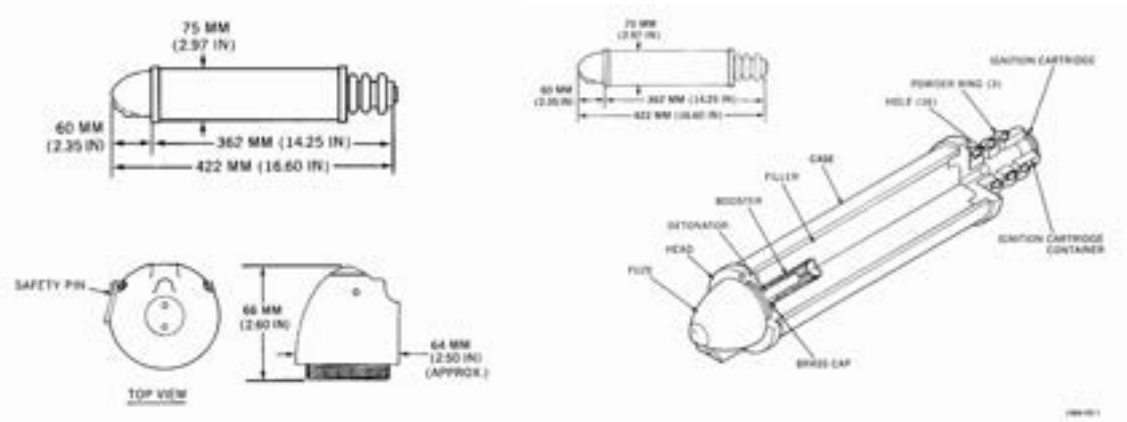
Ordnance Technical Data Sheet

3-Inch Stokes Mortar



Nomenclature:	Mortar, 3-inch Stokes, WP, MK 1 and Practice MK 1
Ordnance Family:	Projectile
DODIC:	Not Provided (obsolete)
Filler:	White Phosphorus (plasticized)
Filler weight:	1.10 kg (2.425 lbs)
Item weight:	5.70 kg (12.57 lbs)
Diameter:	75 mm (2.953 in)
Length:	362 mm (14.25 in)
Maximum Range:	731 m (800 yds)
Fuze:	MK VI Setback-armed, Impact-inertia Fired, All-ways Acting

Usage: The Stokes is a mortar-fired, white phosphorus (WP), or practice cartridge. The WP cartridge is used for screening and against personnel.

Description: The WP case is painted blue-gray with yellow stenciling; the practice case is painted dark blue with white stenciling. The heads of the cases are stamped with the name and mark number of the case, lot number of unfilled cases, inspector's stamp, and initials or symbol of the manufacturer of the metal parts. The cases are stenciled to show the caliber and type, mark number, filler, lot number, and the date and place loaded.

Filler Description: WP is a white to light yellow, wax-like, luminous substance (phosphorescent in the dark). On ignition, it produces a yellow-white flame and dense white smoke. When dispersed by ammunition as small particles, it ignites spontaneously on exposure to air and continues to burn on contact with solid materials, even when embedded in human flesh. It is used in bursting-type projectiles, artillery and mortar shells, grenades, rockets, and bombs.

Ordnance Technical Data Sheet

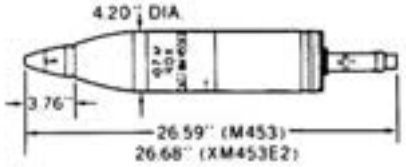
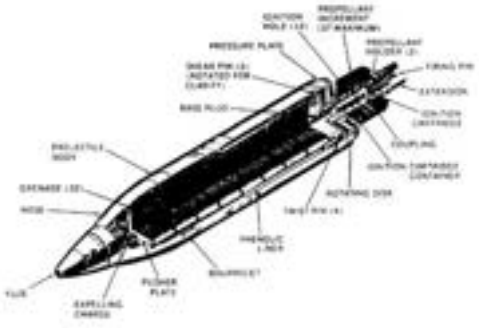
U.S. Cartridge, 4.2-IN (107MM), HE, XM453E2 and M453





Nomenclature: 4.2 Inch (107MM), HE, XM453E2 and M453
Ordnance Family: Projectiles
DODIC: Not Provided
Filler: RDX
Filler weight: 680.40 g (1.5 lbs)
Item weight: 14.06 kg (31 lbs)
Diameter: 107.00 mm (4.2 in)
Length: 675.00 mm (26.57 in)
Maximum Range: Not Provided
Fuze: Mission Dependent

Usage: The general appearance, dimensions, and arrangement of the XM453E2 and M453 4.2-inch (107mm) HE cartridges are shown in the figure above. When the XM453E2 cartridge was type classified, it was designated M453.

Description: The projectile is painted olive drab with markings stenciled in yellow. The identifying features of the cartridges are shown in the figure.

Filler Description: RDX is composed of Cyclotrimethylenetrinitramine, Cyclonite, and Hexogen. It is very stable and is considered the most powerful and brisant of the military high explosives. Although rarely used alone, it is often used in/with other explosives. RDX forms the base for Composition A, B, and C; HBX; H-6; and Cyclotol.

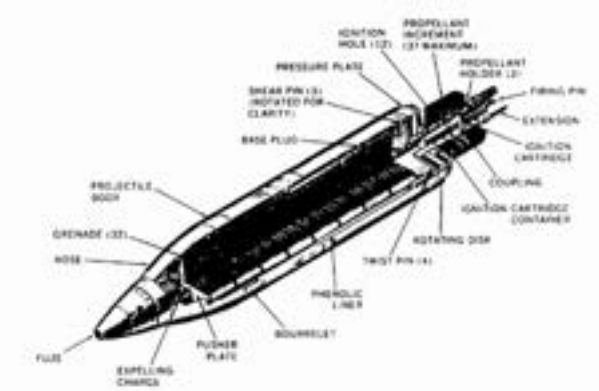
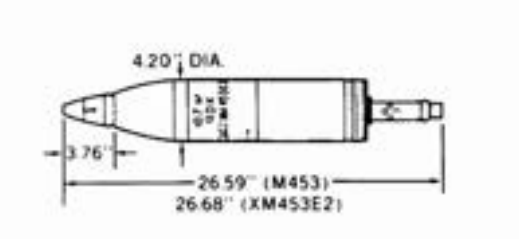
Ordnance Technical Data Sheet

U.S. Cartridge, 4.2-IN (107MM)





Nomenclature:	U.S. Cartridge, 4.2 Inch (107MM)
Ordnance Family:	Projectiles
DODIC:	Not Provided
Filler:	RDX
Filler weight:	680.40 g (1.5 lbs)
Item weight:	14.06 kg (31 lbs)
Diameter:	107.00 mm (4.2 in)
Length:	675.00 mm (26.57 in)
Maximum Range:	3,658 m (4,000 yds)
Fuze:	Mission Dependent

Usage: These are Army, spin-stabilized, mortar-fired, high explosive projectiles.

Description: The complete round consists of a projectile body, fuze, and tail assembly. The projectile body is painted olive drab with yellow markings.

Filler Description: RDX is composed of Cyclotrimethylenetrinitramine, Cyclonite, and Hexogen. It is very stable and is considered the most powerful and brisant of the military high explosives. Although rarely used alone, it is often used in/with other explosives. RDX forms the base for Composition A, B, and C; HBX; H-6; and Cyclotol.

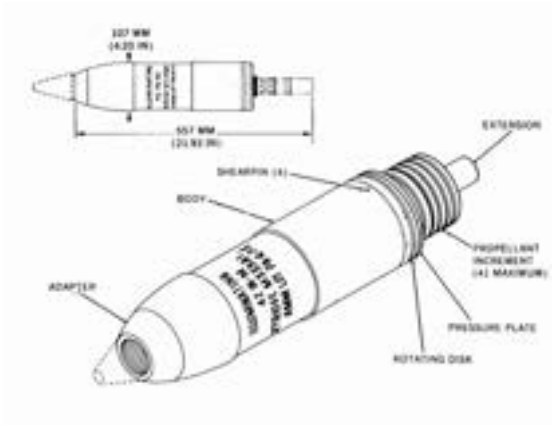
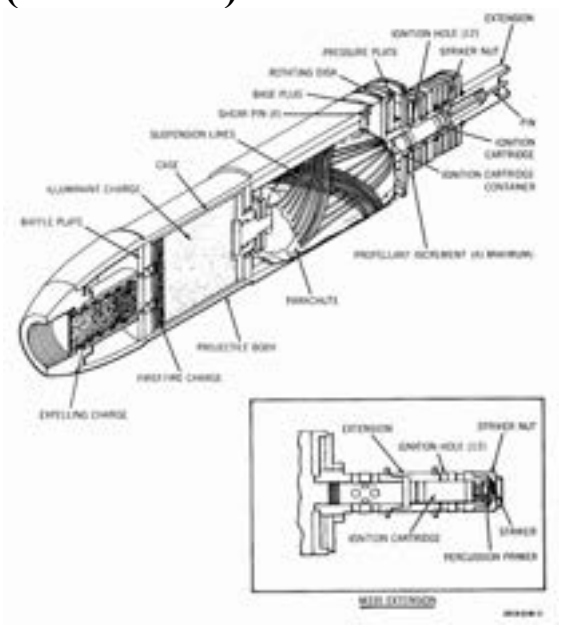
Ordnance Technical Data Sheet

U.S. Cartridge, 4.2-IN (107MM), Illuminating, M335, M335A1, and M335A2 (M335A1E1)





Nomenclature:	Stokes 4.2 inch (107mm) Mortar, Illuminating, M335
Ordnance Family:	Projectile
DODIC:	C706
Filler:	Illuminant Mix
Filler weight:	1.60 kg (3.527 lbs)
Item weight:	11.80 kg (26.01 lbs)
Diameter:	107.00 mm (4.213 in)
Length:	577.00 mm (21.93 in)
Maximum Range:	Not provided
Fuze:	Not provided

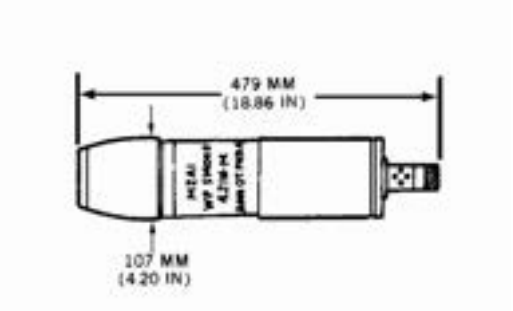
Usage: These are Army, spin-stabilized projectiles containing a base-ejected, parachute suspended illuminant charge. They are fired from mortars when illumination is required.

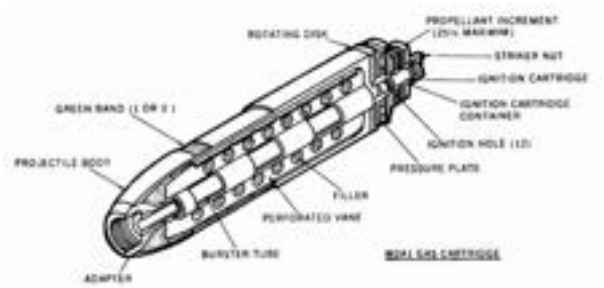
Description: Cartridges have either white projectile bodies with black identification markings or are painted gray with one white band and white identification markings.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Cartridge, 4.2-Inch (107MM), Smoke, WP, M2, M2A1





Nomenclature: Stokes 4.2-inch Mortar, Smoke (WP)
Ordnance Family: Projectile
DODIC: C708
Filler: Smoke Mix (White Phosphorus)
Filler weight: 3.40 kg (7.496 lbs)
Item weight: 11.30 kg (24.91 lbs)
Diameter: 107.00 mm (4.2 in)
Length: 479.00 mm (18.86 in)
Fuze: Not Provided

Usage: These are Army spin-stabilized projectiles fired from mortars to produce screening or spotting smoke and incendiary effects. The projectiles are filled with white phosphorus (WP), some obsolete M2-series smoke cartridges have a substitute filler of titanium tetrachloride (FM) or sulfur trioxide-chlorsulfonic acid (FS).

Description: Currently manufactured projectiles have light green projectile bodies with one yellow band and light red identification markings. Earlier manufactured projectiles have gray bodies with one yellow band and yellow markings.

Filler Description: WP is a white to light yellow, wax-like, luminous substance (phosphorescent in the dark). On ignition, it produces a yellow-white flame and dense white smoke. When dispersed by ammunition as small particles, it ignites spontaneously on exposure to air and continues to burn on contact with solid materials, even when embedded in human flesh. It is used in bursting-type projectiles, artillery and mortar shells, grenades, rockets, and bombs.

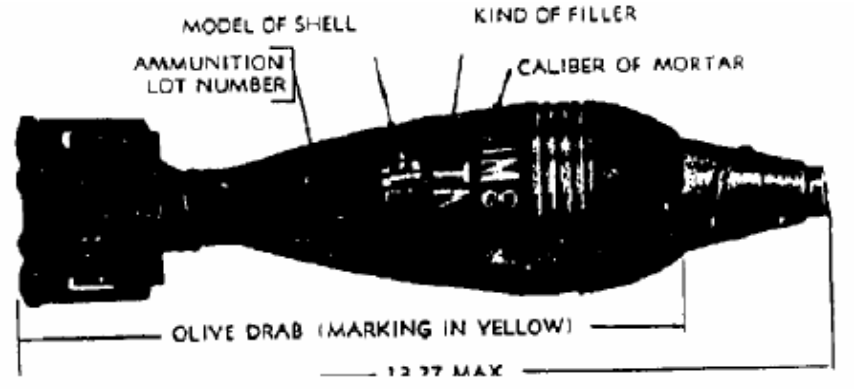
Ordnance Technical Data Sheet

U.S. Projectile, 81MM, HE, M43A1



Nomenclature:	81MM, HE, Mortar
Ordnance Family:	Projectile
DODIC:	C225
Filler:	TNT
Filler weight:	553.39 kg (1.22 lbs)
Item weight:	3.20 kg (7.055 lbs)
Diameter:	81 mm (3.189 in)
Length:	337.06 mm (13.27 in)
Maximum Range:	2,400 m (2,625 yards)
Fragmentation Distance:	612.3 m (2,009 ft)
Fuze:	Various

Usage: The shell was originally adapted as the light shell for the 81mm mortar. It is designed for use against light targets, such as machine gun nests, barbed wire entanglements, and personnel in the open.

Description: The body is olive drab with yellow markings. The body, filler, adapter, and bakelite fuze well cup are exactly the same as in the M43. The fuze used is the Point-detonating Fuze M52, which has a super quick action. Due to the light weight and blunt nose of this shell, very little penetration can be obtained. This shell is designed to produce fragments as its primary function against personnel in the open and against barbed wire entanglements. Fragments to be effective must be above ground. A super quick fuze is used to burst the shell above ground. The body of the shell is constructed of forged steel.

Filler Description: TNT (2, 4, 6-trinitrotoluene), in a pure state, is crystalline and nearly white, resembling a light brown sugar. In a refined form, it is one of the most stable high explosives. It is also used as a constituent of other explosives, including Amatol, Pentolite, Tetrytol, Tritonal, Picratol, and Composition B.

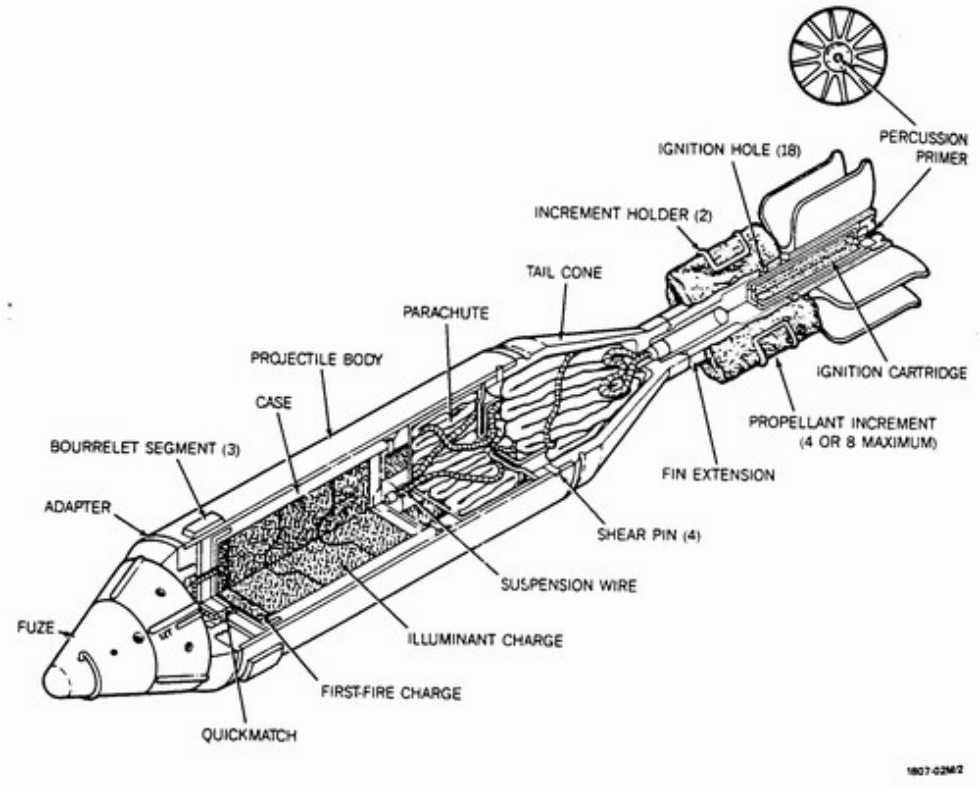
Ordnance Technical Data Sheet

81MM Mortar



Nomenclature:	81MM (3.18in) Mortar
Ordnance Family:	Projectile
DODIC:	C225
Filler:	Round Dependent (Illuminant Charge)
Filler weight:	± 645.00 g
Item weight:	3.4 kg (7.5 lbs)
Diameter:	81 mm (3.189 in)
Length:	571.00 mm (23.20 in)
Maximum Range:	2,400 m (2,625 yds)
Fuze:	M935 Point Detonating Fuze or M734/734A1 Multi-Option Fuze

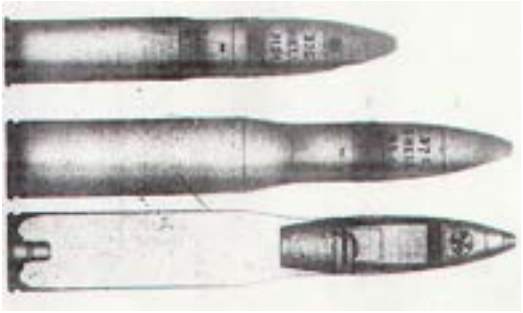
Usage: A Light Support Weapon that provides capability for high explosive, screening smoke, and illumination rounds delivered out to a maximum range of 2,400 m.

Description: The projectiles are painted white with stenciled black identification markings on the projectile bodies. Projectiles also may be gray with a white band and white markings.

Reference: ORDATA Online

Ordnance Technical Data Sheet

U.S. Projectile, 37MM, Gun, HE, M54A1



Nomenclature:	37MM Projectile, High Explosive
Ordnance Family:	Projectile
Filler:	Tetryl
Filler weight:	45.36 g (1.6 oz)
Item weight:	1.188 kg (2.62 lbs)
Diameter:	37.00 mm (1.457 in)
Length:	325.4 mm (12.81 in)
Maximum Range:	11,750 m (12,850 yds)
Fuze:	M56 Fuze

Usage: This general purpose projectile is used for blast and fragmentation effect against personnel, unarmored material targets, and aircraft. It has a substantial high explosive (HE) main charge. The projectile has a relatively thin to medium body-wall thickness. The fragmentation effect results from fracture of the body wall on detonation of the main charge.

Description: The projectile may be fitted with a variety of fuzes for effective use in engaging different types of targets. The presence of the M56 Fuze identifies the round as an HE M54. The complete M54 round (HE shell) can be identified for the M1A2 Antiaircraft Gun by the extracting groove in the cartridge case.

Filler Description: Tetryl is composed of 2,4,6-Trinitrophenylmethylnitramine, N-methyl-N, 2,4,6-Tetranitroaniline, Tetralite, Tetrylite, and Pyronite. It is used extensively as a booster and main charge for small caliber projectiles. It is also used as the base charge in compound detonators. Tetryl is a finely divided crystalline powder that is colorless when freshly prepared and highly purified, rapidly acquires a yellow color when exposed to light, and turns gray when graphite is added as a lubricant during loading. Sensitivity is intermediate between TNT and PETN; it is more sensitive than Picric acid and can be detonated easier than TNT or Ammonium picrate. Tetryl is considered as sensitive as Mercury fulminate when finely divided and it will usually detonate when subjected to bullet impact. Tetryl is slightly hygroscopic, but not adversely affected by moisture.

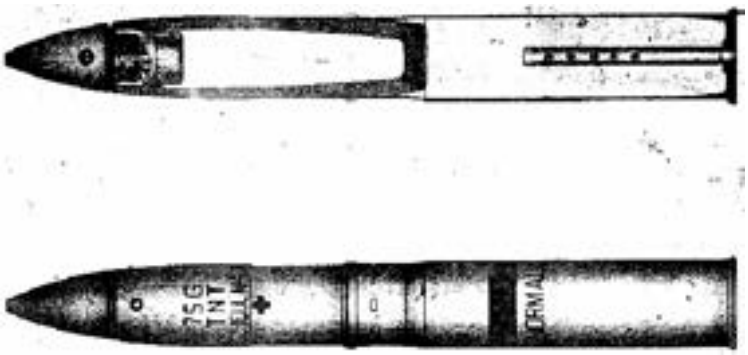
Ordnance Technical Data Sheet

U.S. Projectile, 75MM, Gun, HE, M48



Nomenclature:	75MM Projectile, High Explosive		
Ordnance Family:	Projectile		
Filler:	TNT or Amatol		
Filler weight:	675.9 g (23.84 oz)		
Item weight:	8.274 kg (18.24 lbs)		
Diameter:	75.00 mm (2.953 in)		
Length:	596.4 mm (23.48 in)		
Maximum Range:	7,224 m (7,900 yds)		
Fragmentation Distance:	612.3 m (2,009 ft)	**Fuze:**	Varies

Usage: This is an Army gun-fired projectile that is nose fuzed only. It is painted green.

Description: Army HE projectiles are issued either with a nose fuze in place or with a removable lifting plug or closing plug that is replaced with a nose fuze before firing. Fuze types include ET, MT, MTSQ, PD, and PDSD. These projectiles do not have base fuzes.

Filler (Main Charge) Description: TNT (2, 4, 6-trinitrotoluene), in a pure state, is crystalline and nearly white, resembling a light brown sugar. In a refined form, it is one of the most stable high explosives. It is also used as a constituent of other explosives, including Amatol, Pentolite, Tetrytol, Tritonal, Picratol, and Composition B. Amatol is a main charge explosive employed by practically all foreign countries. It is used in the U.S. as a substitute explosive in 3-inch, 155mm, and larger shells. It is a mixture of Ammonium nitrate and TNT, with the percentage by weight of ammonium nitrate varying from 40 to 80 percent. It has a color of yellow to dark brown depending on the composition and purity of components. Amatol is less sensitive to detonation than TNT, but is readily detonated by mercury fulminate and other high explosives. It is very hygroscopic and, therefore, is usually protected by a sealing pour of TNT.

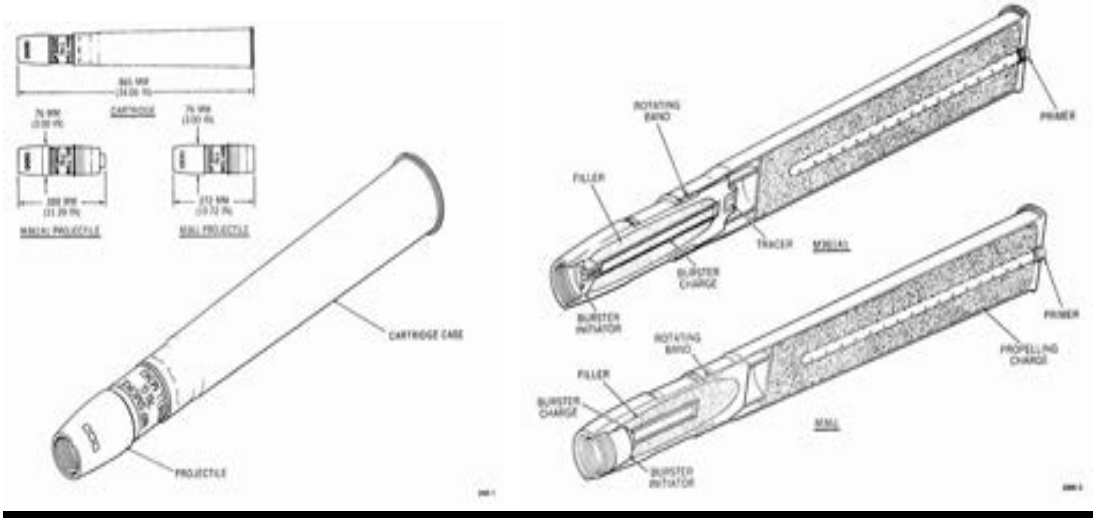
Ordnance Technical Data Sheet

U.S. Cartridge, 76MM, Smoke, WP, M361 (T140E2) and M361A1



Nomenclature:	76MM, Smoke (WP), M361
Ordnance Family:	Projectile
DODIC:	C128
Filler:	Smoke Mix (White Phosphorus)
Filler weight:	612.00 g (1.349 lbs)
Item weight:	6.00 kg (13.23 lbs)
Diameter:	76.00 mm (2.992 in)
Length:	272.00 mm (10.71 in)
Maximum Range:	Not Provided
Fuze:	Impact Fired

Usage: These are Army smoke projectiles used for spotting targets or screening; the projectiles also have a slight incendiary effect.

Description: Older projectiles are gray with a yellow band and yellow markings; newer projectiles are light green with a yellow band and red markings.

Filler Description: White phosphorus (WP) is a white to light yellow, wax-like, luminous substance (phosphorescent in the dark). On ignition, it produces a yellow-white flame and dense white smoke. When dispersed by ammunition as small particles, it ignites spontaneously on exposure to air and continues to burn on contact with solid materials, even when embedded in human flesh. It is used in bursting-type projectiles, artillery and mortar shells, grenades, rockets, and bombs.

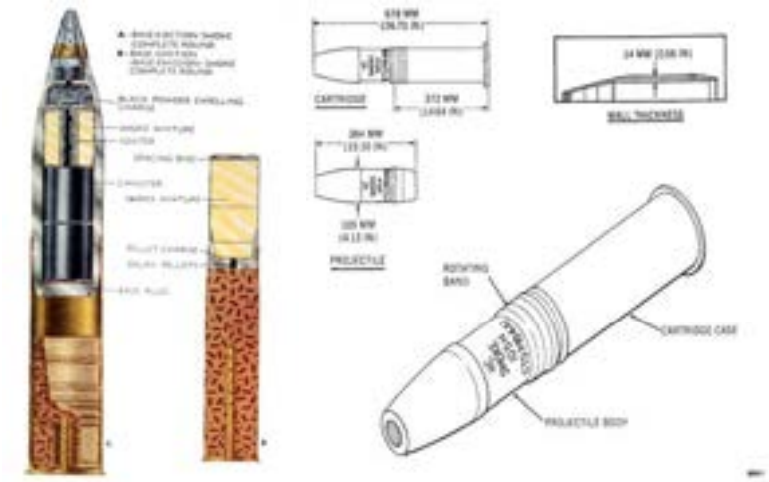
Ordnance Technical Data Sheet

U.S. Cartridge, 105MM, HC and Colored Smoke, BE, M84 and M84A1



Nomenclature:	105MM, HC and Colored Smoke, BE, M84 and M84A1
Ordnance Family:	Projectile
DODIC:	C452
Filler:	Smoke Mix
Filler weight:	5.90 kg (13.01 lbs)
Item weight:	19.00 kg (41.89 lbs)
Diameter:	105.00 mm (4.123 in)
Length:	384.00 mm (15.12 in)
Maximum Range:	2,003 m (2,190 yds)
Fuze:	Mechanical Time Fuze

Usage: These are percussion-primed, semi-fixed Howitzer-fired cartridges with spin-stabilized, base-ejection smoke projectiles. They contain smoke canisters that emit either white, red, yellow, green, or violet smoke upon ejection. They are used for screening, spotting, or signaling purposes. The figure shows the appearance and dimensions of the M84A1 cartridge. The M84 and M84B1 cartridges are similar.

Description: Earlier manufactured projectiles are painted gray, with one yellow band and yellow-stenciled identification and manufacturing markings. Newer projectiles are painted light green, with black-stenciled identification and manufacturing markings. Older projectiles are marked with a row of squares whose color corresponds to the color of the smoke produced. Newer projectiles have either the letters HC, indicating that white smoke is produced, or a row of three letter C's in the color of the smoke produced. Brass cartridge cases are not painted. Steel cartridge cases are lacquered dark green or dark brown. White-stenciled identification and manufacturing markings are found on the base and on the lower portion of the cartridge case.

Ordnance Technical Data Sheet

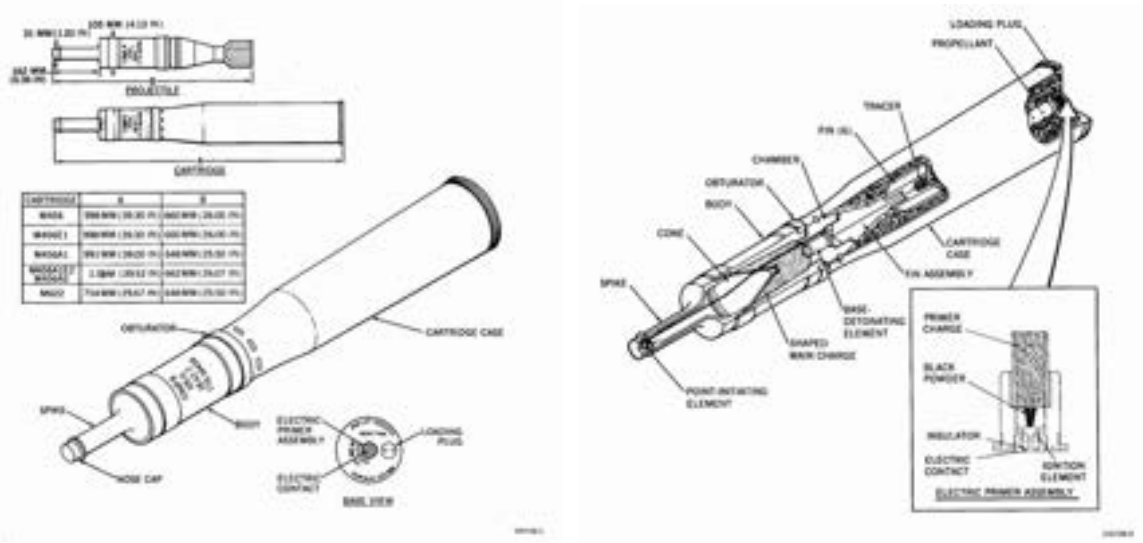
U.S. Cartridge, 105MM, HEAT-T, M622 and M456A1



Nomenclature: 105MM, HEAT-T, M622 and M456A1
Ordnance Family: Projectile
DODIC: C508
Filler: Composition B
Filler weight: 1.00 kg (2.205)
Item weight: 10.00 kg (22.50)
Diameter: 105.00 mm (4.134 in)
Length: 648.00 mm (25.51 in)
Maximum Range: Not Provided
Fuze: M509 Series Impact Fuze

Usage: This is a fixed cartridge with a fin-stabilized high-explosive antitank with tracer (HEAT-T) projectile. The projectile incorporates a setback-armed, point-initiating base-detonating (PIBD) fuze containing a piezoelectric (Lucky) crystal and an electric detonator. The M509-series fuzes are impact fired.

Description: The projectiles are painted black or olive drab. The M622 markings are white. The M456A1 markings are yellow and white, with yellow bands on the spike.

Filler (Main Charge) Description: Composition B consists of a mixture of TNT (Trinitrotoluene) and RDX (Cyclotrimethylenetrinitramine, Cyclonite, and Hexogen). It is used as a burster in Army projectiles, rockets, hand grenades, and landmines.

DODIC: Not Provided
Filler: Tetryl
Filler weight: 196 g (6.9 oz)
Item weight: Not Available
Diameter: Varies
Length: 173 mm (6.8 in)

Usage: The adapter booster is a device fitted into the fuze well of a bomb that allows a fuze of smaller diameter to be used. Adapter boosters contain an explosive that transmits the firing train output of the fuze to the main explosive charge of the bomb. These devices can be used in projectiles, bombs, and rocket warheads.

Filler Description: Tetryl is composed of 2,4,6-Trinitrophenylmethylnitramine, N-methyl-N, 2,4,6-Tetranitroaniline, Tetralite, Tetrylite, and Pyronite. It is used extensively as a booster and main charge for small caliber projectiles. It is also used as the base charge in compound detonators. Tetryl is a finely divided crystalline powder that is colorless when freshly prepared and highly purified, rapidly acquires a yellow color when exposed to light, and turns gray when graphite is added as a lubricant during loading. Sensitivity is intermediate between TNT and PETN; it is more sensitive than Picric acid and can be detonated easier than TNT or Ammonium picrate. Tetryl is considered as sensitive as Mercury fulminate when finely divided and it will usually detonate when subjected to bullet impact. Tetryl is slightly hygroscopic, but not adversely affected by moisture.

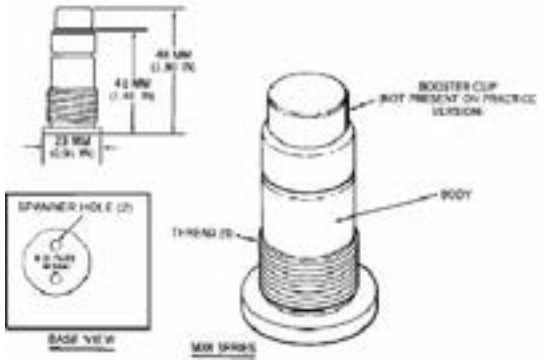
Ordnance Technical Data Sheet

U.S. Fuze, Projectile, BD, M38 and M38A1



Nomenclature:	Projectile Fuze
Ordnance Family:	Fuze
DODIC:	Not Provided
Filler:	Tetryl
Filler weight:	Less than 2 grams
Item weight:	Not Available
Diameter:	23 mm (0.91 in)
Length:	48 mm (1.90 in)
Fuze:	Various

Usage: These are setback-armed, impact-inertia-fired, non-delay, base-detonating fuzes. The fuzes are not painted and are marked on their bases with their nomenclatures. The bodies of the M38 series fuzes are brass.

Description: On projectile firing, the setback drives the setback sleeve rearward, which forces the resistance ring rearward over the shoulder and into the groove around the base of the firing pin. The resistance ring locks the setback sleeve and firing pin together, with the tip of the firing pin protruding from the front of the sleeve. On projectile impact, inertia drives the firing pin and sleeve forward against the creep spring. The firing pin stabs the detonator, initiating the explosive train.

Filler Description: Tetryl is composed of 2,4,6-Trinitrophenylmethylnitramine, N-methyl-N, 2,4,6-Tetranitroaniline, Tetralite, Tetrylite, and Pyronite. It is used extensively as a booster and main charge for small caliber projectiles. It is also used as the base charge in compound detonators. Tetryl is a finely divided crystalline powder that is colorless when freshly prepared and highly purified, rapidly acquires a yellow color when exposed to light, and turns gray when graphite is added as a lubricant during loading. Sensitivity is intermediate between TNT and PETN; it is more sensitive than Picric acid and can be detonated easier than TNT or Ammonium picrate. Tetryl is considered as sensitive as Mercury fulminate when finely divided and it will usually detonate when subjected to bullet impact. Tetryl is slightly hygroscopic, but not adversely affected by moisture.

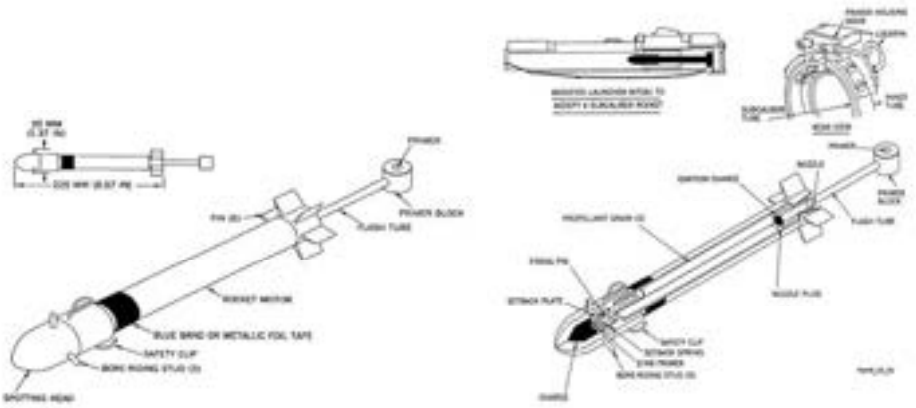
Ordnance Technical Data Sheet

U.S. Rocket, 35MM, Sub-caliber, Practice, M73



Nomenclature: U.S. Rocket, 35MM, Sub-caliber, Practice, M73
Ordnance Family: Rocket
DODIC: H708
Filler: Smoke Mix (Witness Charge Only)
Filler weight: 10.00 g (.3527 oz)
Item weight: 145.00 g (5.115 oz)
Diameter: 35.00 mm (1.3878 in)
Length: 225.00 mm (8.858 in)
Maximum Range: 220 m (240.6 yds)
Fuze: Impact-inertia Fuze

Usage: This is a sub-caliber practice rocket incorporating an integral, impact-inertia fuze. It is used for training and simulates the rocket for the light antitank weapon (LAW) system. The rocket is fired from a practice M190 launcher (a modified M72A1 LAW launcher). The figure shows the appearance and dimensions of the M73 practice rocket and M190 launcher.

Description: The spotting head and fins are painted black; the remainder of the rocket is olive drab. A blue band appears on the forward end of the rocket motor. On later production rockets, the spotting head is painted blue and the fins are painted brown. The rocket motor section is olive drab with white markings. A metallic foil covered tape is attached around the forward end of the rocket motor for weight adjustment.

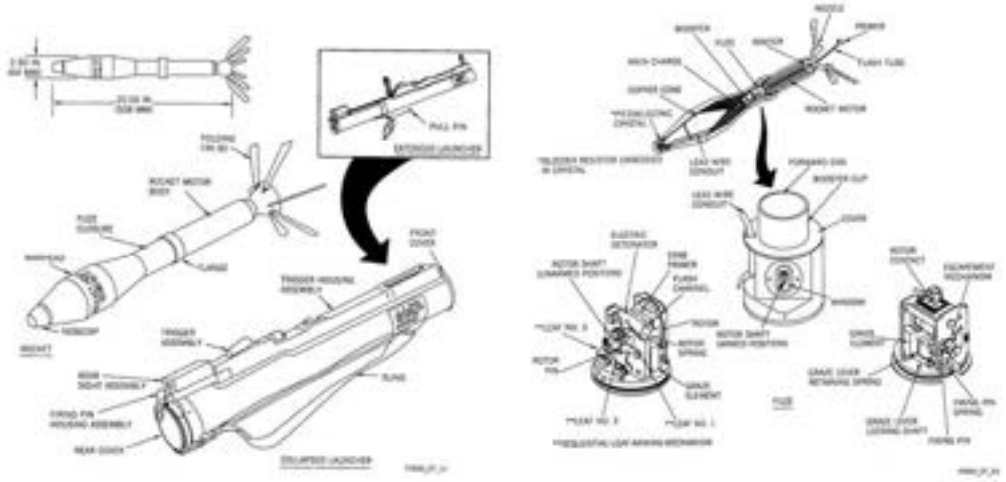
Ordnance Technical Data Sheet

U.S. Rocket, 66MM, Law, M72, M72A1, M72A2, and M72A3



Nomenclature:	66MM, Law, M72, M72A1, M72A2, and M72A3
Ordnance Family:	Rockets
DODIC:	B642
Filler:	Octol
Filler weight:	454.00 g (16.01 oz)
Item weight:	2.18 kg (4.806 lbs)
Diameter:	64.00 mm (2.52 in)
Length:	508.00 mm (20 in)
Maximum Range:	1,000 meters (3,300 feet)
Fuze:	M412 PIBD or M412A1

Usage: These are shoulder-fired, fin-stabilized, high-explosive light antitank weapons used primarily to penetrate armored targets. The rockets use an M54 rocket motor. The M72 uses an M18 warhead and an M412 point-initiating base-detonating (PIBD) fuze.

Description: The rocket launcher is painted olive drab with instruction labels on olive drab backgrounds with white printing. The manufacturing information is also printed in white. Launchers with limited light sights have a decal stating such and front sights coated with a yellow- or white-colored radioactive material at the 100- and 150-meter range markings and the remaining markings in red. Front sights not coated for night use will have all range markings in red. The rocket motor is brown and the warhead is black with yellow markings.

Filler (Main Charge) Description: Octol is a mixture of HMX (75%) and TNT (25%). HMX is a high melting explosive composed of Octogen and Cyclotetramethylene-tetranitramine. It is sensitive to high temperatures and is typically mixed with TNT in high blast explosives. TNT (2, 4, 6-trinitrotoluene), in a pure state, is crystalline and nearly white, resembling a light brown sugar. It is one of the most stable high explosives in refined form.

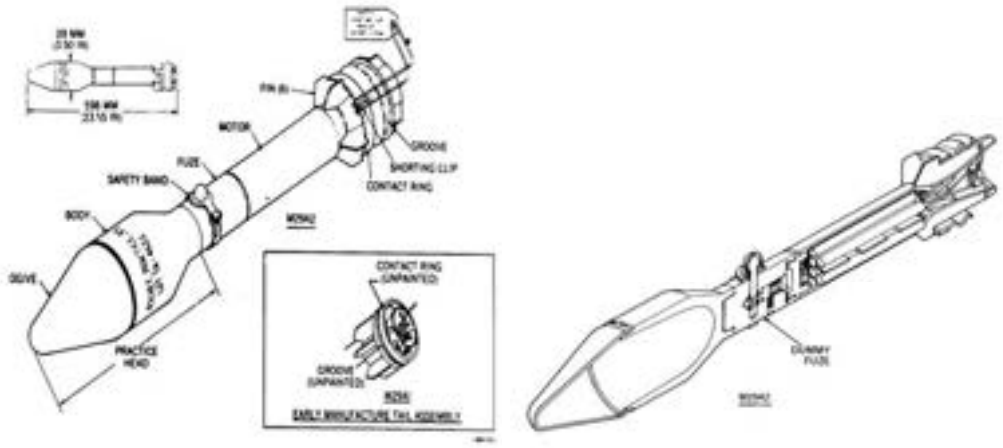
Ordnance Technical Data Sheet

U.S. Rocket, 3.5-Inch, Practice, M29, M29A1, and M29A2



Nomenclature:	3.5-Inch, Practice, M29, M29A1, and M29A2
Ordnance Family:	Rockets
DODIC:	H601
Filler:	None
Filler weight:	None
Item weight:	3.90 kg (137.6 oz)
Diameter:	89.00 mm (3.5 in)
Length:	598.00 mm (23.54 in)
Fuze:	None

Usage: The M29-series rockets are inert and are used for training. The M29A2 rocket is modified for use in the M69 practice landmine system.

Description: The fuzes are painted olive drab or black and have the designation and loading information stamped on the body. The M29 warhead and rocket motor are blue. The M29A1 and M29A2 warheads are blue and the rocket motors are brown or olive drab with brown bands. The M29-series practice heads have white markings. The contact ring and groove, or notch, on the rockets are not painted.

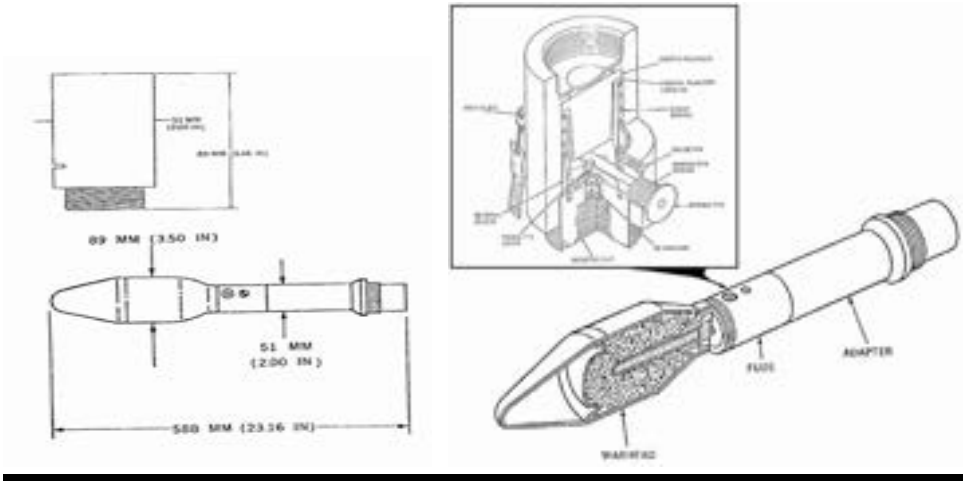
Ordnance Technical Data Sheet

U.S. Rocket Warhead, 3.5-Inch



Nomenclature: U.S. Rocket Warhead, 3.5-Inch Smoke, WP, Aircraft
Ordnance Family: Rockets
DODIC: Obsolete
Filler: Smoke Mix (White Phosphorus)
Filler weight: 1.00 kg (2.2 lbs)
Item weight: 4.90 kg (10.8 lbs)
Diameter: 89.00 mm (3.5 in)
Length: 588.00 mm (23.15 in)
Maximum Range: Not Provided
Fuze: M404A1 Base Detonating (BD)

Usage: This is a 3.5-inch white phosphorus (WP) filled rocket warhead. It uses the M404A1 (modified) fuze, which is a direct-arming, base-detonating (BD), non-delay fuze. The warhead and fuze are coupled to a 2.75-inch rocket motor by an adapter and are used against aircraft.

Description: The fuze is painted olive drab or black and has the designation and loading information stamped on the body. Older warheads are painted gray with yellow markings.

Filler Description: WP is a white to light yellow, wax-like, luminous substance (phosphorescent in the dark). On ignition, it produces a yellow-white flame and dense white smoke. When dispersed by ammunition as small particles, it ignites spontaneously on exposure to air and continues to burn on contact with solid materials, even when embedded in human flesh. It is used in bursting-type projectiles, artillery and mortar shells, grenades, rockets, and bombs.

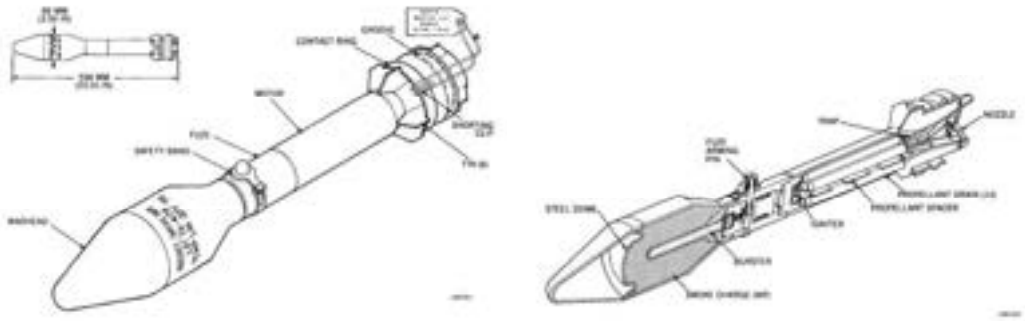
Ordnance Technical Data Sheet

U.S. Rocket, 3.5-Inch, Smoke (WP), M30 (T127E3) and T127E2



Nomenclature: 3.5-Inch, Smoke (WP), M30 (T127E3) and T127E2
Ordnance Family: Rockets
DODIC: Not Provided
Filler: Smoke Mix (White Phosphorus)
Filler weight: 1.10 kg (2.425 lbs)
Item weight: 4.10 kg (9.039 lbs)
Diameter: 98.00 mm (3.5 in)
Length: 589.00 mm (23.54 in)
Maximum Range: Not Provided
Fuze: Impact, Base Detonating Fuze

Usage: These are 3.5-inch, ground-fired, fixed-fin, smoke (white phosphorus) rockets.

Description: The warheads are light green with light red markings and a light red band. Older warheads are painted gray with yellow markings. The rocket motor is brown or olive drab. The fuzes are painted olive drab or black and have the designation and loading information stamped on the body.

Filler (Smoke Charge) Description: White phosphorus (WP) is a white to light yellow, wax-like, luminous substance (phosphorescent in the dark). On ignition, it produces a yellow-white flame and dense white smoke. When dispersed by ammunition as small particles, it ignites spontaneously on exposure to air and continues to burn on contact with solid materials, even when embedded in human flesh. It is used in bursting-type projectiles, artillery and mortar shells, grenades, rockets, and bombs.

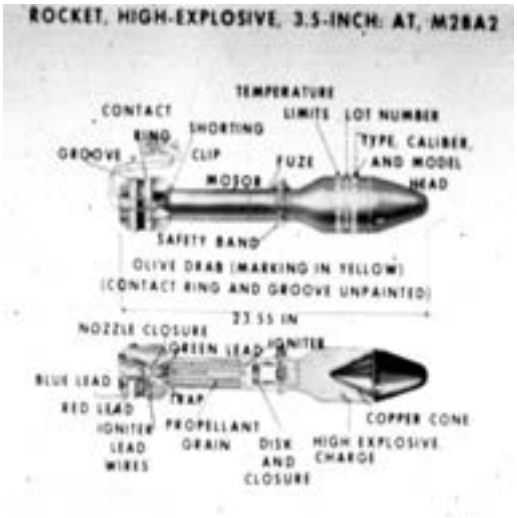
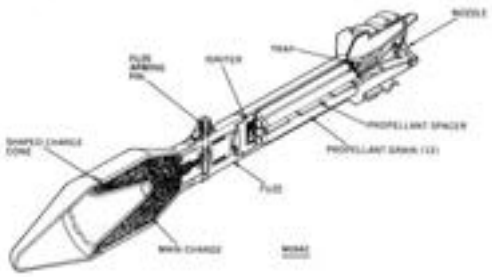
Ordnance Technical Data Sheet

U.S. Rocket, 3.5-Inch, HEAT, M28 and M28A2





Nomenclature:	U.S. Rocket, 3.5-Inch, HEAT, M28 and M28A2
Ordnance Family:	Rockets
DODIC:	H600
Filler:	Composition B
Filler weight:	853.00 g (30.09 oz)
Item weight:	4.10 kg (9.039 lbs)
Diameter:	89.00 mm (3.5 in)
Length:	598.00 mm (23.54 in)
Maximum Range:	Not Provided
Fuze:	Setback-armed, Base-detonating (BD)

Usage: These are ground-fired, fixed-fin rockets that use setback-armed, base-detonating (BD), non-delay, impact-inertia-fired fuzes and a high-explosive antitank (HEAT) shaped-charge warhead. The fuzes are painted olive drab or black and have the designation and loading information stamped on the body.

Description: The M28 warhead is olive drab with yellow markings; the M28A2 may have an olive drab or black warhead with yellow markings. Some M28A2 warheads with fuzes may be inert and painted blue. The rocket motor may be brown or olive drab with a brown band.

Filler (Main Charge) Description: Composition B consists of a mixture of TNT (Trinitrotoluene) and RDX (Cyclotrimethylenetrinitramine, Cyclonite, and Hexogen). It is used as a burster in Army projectiles, rockets, hand grenades, and landmines.

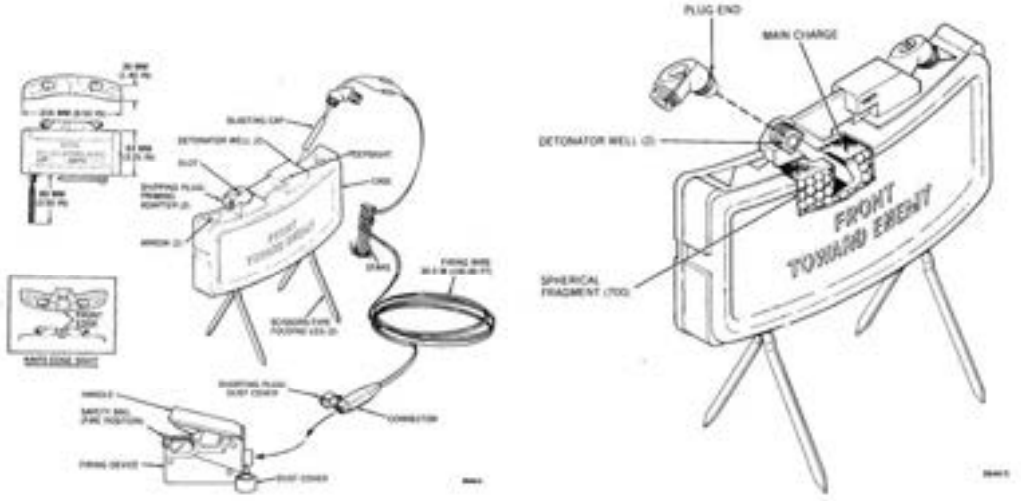
Ordnance Technical Data Sheet

U.S. Landmine, Apers, HE, M18A1 Claymore and Practice, M68



Nomenclature:	APERS, HE, M18A1 Claymore and Practice, M68
Ordnance Family:	Landmines
DODIC:	K143
Filler:	Composition C-4 (M18A1 only)
Filler weight:	680.00 g (23.99 oz)
Item weight:	1.60 kg (3.52 lbs)
Diameter:	216.00 mm (8.50 in)
Length:	83.00 mm (3.26 in)
Maximum Range:	Not Provided
Fuze:	Electric/non-electric command detonation

Usage: The M68 practice mine is similar to the M18A1 mine, except that the inert loaded M33 mine body replaces the high explosive loaded M18A1 mine body and the empty practice blasting cap M10 replaces the loaded blasting cap. The M18A1 is a directional, fragmentation, high explosive (HE), antipersonnel (apers) landmine that may be electrically or non-electrically initiated. It may be used as a controlled-fired mine in offensive or defensive situations.

Description: The M18A1 mine is olive drab.

Filler (Main Charge) Description: C-4 is a plastic demolition explosive consisting of RDX, other explosives, and plasticizers. C-4 can be molded by hand for demolition work and packed by hand into shape charge devices.

90mm HEAT Projectile - UXO

Target Berm

81mm Mortar Probable Illumination – Probable MD

81mm Mortar TP - MD

Old HE Hard Target - RRD

Old HE Hard Target - RRD

Small Arms Debris – Abundant on North Side of Site - MD

105mm TP Projectile Debris - MD

75mm HE Projectile - UXO

105mm TP Projectile Debris - MD

Old HE Hard Target - RRD

Old Target Debris - RRD

Old Berm/Target

155mm TP Projectile - MD

165mm TP Projectile - MD

51 Series Fuze - MD

51 Series Fuze - MD

25mm TP Projectile - MD

Unknown Munitions Debris

Mortar Illumination – Probable MD

Target Stand

Old Mover Rails

Old Mover Car

60mm TP Mortar - MD

Appendix D

QC Log

Note Taker: Jason Burcham

11/11/12

0730 – Swept an area offsite and determined it free of subsurface anomalies. Placed a MEC simulant on the surface and swept the item with a Schiebel MIMID on high setting. The instrument produced an audible signal indicating a positive detect and proper function. Survey commenced

1700 – Re-swept test strip. The instrument produced an audible signal indicating a positive detect and proper function. Departed site.

11/12/12

0730 - Re-swept test strip. The instrument produced an audible signal indicating a positive detect and proper function. Survey commenced.

1430 - Re-swept test strip. The instrument produced an audible signal indicating a positive detect and proper function. Survey Complete.

DEPARTMENT OF THE ARMY
OFFICE OF THE ASSISTANT SECRETARY
INSTALLATIONS AND ENVIRONMENT
110 ARMY PENTAGON
WASHINGTON, DC 20310-0110

APR 2 1 2005

MEMORANDUM FOR THE ASSISTANT CHIEF OF STAFF FOR INSTALLATION MANAGEMENT

SUBJECT: Munitions Response Terminology

1. This memorandum replaces my October 28, 2003 memorandum, subject: Definitions Related to Munitions Response Terms, and requests your office ensure that the enclosed terms and their definitions (Enclosure 1) are used, when appropriate, in correspondence (e.g., policies, guidance) and briefings concerning the Army's implementations of its Military Munitions Response Program (MMRP), Sustainable Range Management Program (SRMP) and, as appropriate, in other munitions-related matters.

2. In the past three years, the Department of Defense (DoD) has developed policies and guidance to implement its MMRP and SRMP. It has also worked to close a policy gap related to the management of material that may pose explosives hazards to DoD personnel and/or the public. During this period, DoD has been actively engaged, through the Munitions Response Committee (MRC), with the U.S. Environmental Protection Agency, Federal Land Managers, states, and with American Indians and Alaska Natives, to address issues related to the cleanup of munitions response sites.

3. To provide clarity and consistency in these efforts and in internal and external discussions, DoD has been working to establish and use common terms and definitions. The consistent use of accurate, descriptive terms, the definitions of which are commonly understood, is important to our dialogue with environmental regulators and safety officials, stakeholders, and the public.

4. Many of the terms that DoD has adopted for use in addressing munitions-related issues are now codified in Federal statute. On December 14, 2004, the Department of Defense Explosives Safety Board approved revisions to DoD 6055.9-STD, Ammunition and Explosives Safety Standards, using the enclosed terms.

5. The U.S. Army Technical Center for Explosives Safety, in coordination with other agencies, developed the enclosed matrix (Enclosure 2) to help the communities (e.g., operational, explosives safety, logistical, and cleanup) involved in addressing munitions-related operations to better understand how some of the new terms apply to actions they conduct.

Printed on Recycled Paper

6. Use of this terminology does not imply any specific funding authority, nor does it alter the DERP Management Guidance's program eligibility criteria.

7. My staff point of contact is J. C. King at (703) 697-5564 or jc.king@us.army.mil.

Enclosure 1: Military Munitions-Related Terms and Definitions

Consolidated Definitions
Anomaly Avoidance. Techniques employed on property known or suspected to contain UXO, other munitions that may have experienced abnormal environments (e.g., DMM), munitions constituents in high enough concentrations to pose an explosive hazard, or CA, regardless of configuration, to avoid contact with potential surface or subsurface explosive or CA hazards, to allow entry to the area for the performance of required operations.
Chain of Custody. The activities and procedures taken throughout the inspection, re-inspection and documentation process to maintain positive control of MPPEH to ensure the veracity of the process used to determine the status of material as to its explosive hazard. This includes all such activities from the time of collection through final disposition.
Chemical Agent (CA). A chemical compound (to include experimental compounds) that, through its chemical properties produces lethal or other damaging effects on human beings, is intended for use in military operations to kill, seriously injure, or incapacitate persons through its physiological effects. Excluded are research, development, testing and evaluation (RDTE) solutions; riot control agents; chemical defoliants and herbicides; smoke and other obscuration materials; flame and incendiary materials; and industrial chemicals.
Chemical Agent (CA) Hazard. A condition where danger exists because CA is present in a concentration high enough to present potential unacceptable effects (e.g., death, injury, damage) to people, operational capability, or the environment.
Chemical Agent (CA) Safety. A condition where operational capability and readiness, people, property, and the environment are protected from the unacceptable effects or risks of a mishap involving chemical warfare material (CWM) and CA in other than munitions configurations.
Chemical Warfare Material (CWM). Items generally configured as a munition containing a chemical compound that is intended to kill, seriously injure, or incapacitate a person through its physiological effects. CWM includes V- and G-series nerve agents or H-series (mustard) and L-series (lewisite) blister agents in other-than-munition configurations; and certain industrial chemicals (e.g., hydrogen cyanide (AC), cyanogen chloride (CK), or carbonyl dichloride (called phosgene or CG)) configured as a military munition. Due to their hazards, prevalence, and military-unique application, chemical agent identification sets (CAIS) are also considered CWM. CWM does not include: riot control devices; chemical defoliants and herbicides; industrial chemicals (e.g., AC, CK, or CG) not configured as a munition; smoke and other obscuration producing items; flame and incendiary producing items; or soil, water, debris or other media contaminated with low concentrations of chemical agents where no CA hazards exist.
Chemical Warfare Material (CWM) Response. Munitions responses and other responses to address the chemical safety; explosives safety, when applicable; human health; or environmental risks presented by CA-filled munitions and CA in other than munitions configurations. (See munitions response.)
Construction Support. Assistance provided by DoD EOD or UXO-qualified personnel and/or by personnel trained and qualified for operations involving CA, regardless of configuration, during intrusive construction activities on property known or suspected to contain UXO, other munitions that may have experienced abnormal environments (e.g., DMM), munitions constituents in high enough concentrations to pose an explosive hazard, or CA, regardless of configuration, to ensure the safety of personnel or resources from any potential explosive or CA hazards.
Cultural Debris. Debris found on operational ranges or munitions response sites, which may be removed to facilitate a range clearance or munitions response, that is not related to munitions or range operations. Such debris includes, but is not limited to: rebar, household items (refrigerators, washing machines, etc.), automobile parts and automobiles that were not associated with range targets, fence posts, and fence wire.
Defense Sites. Locations that are or were owned by, leased to, or otherwise possessed or used by the Department of Defense. The term does not include any operational range, operating storage or manufacturing facility, or facility that is used for or was permitted for the treatment or disposal of military munitions. (10 U.S.C. 2710(e)(1))
Discarded Military Munitions (DMM). Military munitions that have been abandoned without proper disposal or removed from storage in a military magazine or other storage area for the purpose of disposal. The term does not include unexploded ordnance, military munitions that are being held for future use or planned disposal, or military munitions that have been properly disposed of, consistent with applicable environmental laws and regulations. (10 U.S.C. 2710(e)(2))
Disposal. End of life tasks or actions for residual materials resulting from demilitarization or disposition operations.
Disposition. The process of reusing, recycling, converting, redistributing, transferring, donating, selling, demilitarizing, treating, destroying, or fulfilling other life-cycle guidance, for DoD property.

Documentation of the Explosives Safety Status of Material. Documentation attesting that material: (1) does not present an explosive hazard and is consequently safe for unrestricted transfer within or release from DoD control, or (2) is MPPEH, with the known or suspected explosive hazards stated, that is only transferable or releasable to a qualified receiver. This documentation must be signed by a technically qualified individual with direct knowledge of: (1) the results of both the material's 100 percent inspection and 100 percent re-inspection or of the approved process used and the appropriate level of re-inspection, and (2) the veracity of the chain-of-custody for the material. This signature is followed by the signature of another technically qualified individual who inspects the material on a sampling basis (sampling procedures are determined by DoD entity that is inspecting the material).
Environmental Regulators and Safety Officials. Include, but may not be limited to environmental regulators, environmental coordinators or hazardous material coordinators, law enforcement officers, and safety personnel of the U.S. Environmental Protection Agency (USEPA), American Indians and Alaska Natives, other Federal Land Managers, and/or the States. When appropriate, public health officials of various agencies may also be involved.
Explosive Hazard. A condition where danger exists because explosives are present that may react (e.g., detonate, deflagrate) in a mishap with potential unacceptable effects (e.g., death, injury, damage) to people, property, operational capability, or the environment.
Explosive Ordnance Disposal (EOD). The detection, identification, on-site evaluation, rendering safe, recovery, and final disposal of unexploded ordnance and of other munitions that have become an imposing danger, for example, by damage or deterioration.
Explosive Ordnance Disposal (EOD) Personnel. Military personnel who have graduated from the Naval School, Explosive Ordnance Disposal; are assigned to a military unit with a Service-defined EOD mission; and meet Service and assigned unit requirements to perform EOD duties. EOD personnel have received specialized training to address explosive and certain CA hazards during both peacetime and wartime. EOD personnel are trained and equipped to perform Render Safe Procedures (RSP) on nuclear, biological, chemical, and conventional munitions, and on improvised explosive devices.
Explosive Ordnance Disposal (EOD) Unit. A military organization constituted by proper authority; manned with EOD personnel; outfitted with equipment required to perform EOD functions; and assigned an EOD mission.
Explosives or Munitions Emergency Response. All immediate response activities by an explosives and munitions emergency response specialist to control, mitigate, or eliminate the actual or potential threat encountered during an explosives or munitions emergency. An explosives or munitions emergency response may include in-place render-safe procedures, treatment or destruction of the explosives or munitions, and/or transporting those items to another location to be rendered safe, treated, or destroyed. Any reasonable delay in the completion of an explosives or munitions emergency response caused by a necessary, unforeseen, or uncontrollable circumstance will not terminate the explosives or munitions emergency. Explosives and munitions emergency responses can occur on either public or private lands and are not limited to responses at RCRA facilities. (Military Munitions Rule, 40 CFR 260.10)
Explosives Safety. A condition where operational capability and readiness, people, property, and the environment are protected from the unacceptable effects or risks of potential mishaps involving military munitions.
Interim Holding Facility (IHF). A temporary storage facility designed to hold recovered chemical warfare material (RCWM).
Land Use Controls (LUC). LUC are physical, legal, or administrative mechanisms that restrict the use of, or limit access to, real property, to manage risks to human health and the environment. Physical mechanisms encompass a variety of engineered remedies to contain or reduce contamination and/or physical barriers to limit access to real property, such as fences or signs.
Long-Term Management (LTMgt). The period of site management (including maintenance, monitoring, record keeping, 5-year reviews, etc.) initiated after response (removal or remedial) objectives have been met (i.e., after Response Complete).
Material Potentially Presenting an Explosive Hazard (MPPEH). Material potentially containing explosives or munitions (e.g., munitions containers and packaging material; munitions debris remaining after munitions use, demilitarization, or disposal; and range-related debris); or material potentially containing a high enough concentration of explosives such that the material presents an explosive hazard (e.g., equipment, drainage systems, holding tanks, piping, or ventilation ducts that were associated with munitions production, demilitarization or disposal operations). Excluded from MPPEH are munitions within DoD's established munitions management system and other hazardous items that may present explosion hazards (e.g., gasoline cans, compressed gas cylinders) that are not munitions and are not intended for use as munitions.

Enclosure 1: Military Munitions-Related Terms and Definitions

Military Munitions. Military munitions means all ammunition products and components produced for or used by the armed forces for national defense and security, including ammunition products or components under the control of the Department of Defense, the Coast Guard, the Department of Energy, and the National Guard. The term includes confined gaseous, liquid, and solid propellants; explosives, pyrotechnics, chemical and riot control agents, smokes, and incendiaries, including bulk explosives, and chemical warfare agents; chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges; and devices and components thereof. The term does not include wholly inert items; improvised explosive devices; and nuclear weapons, nuclear devices, and nuclear components, other than nonnuclear components of nuclear devices that are managed under the nuclear weapons program of the Department of Energy after all required sanitization operations under the Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.) have been completed. (10 U.S.C. 101(e)(4)(A) through (C))
Military Munitions Burial Site. A site, regardless of location, where military munitions or CA, regardless of configuration, were intentionally buried, with the intent to abandon or discard. This term includes burial sites used to dispose of military munitions or CA, regardless of configuration, in a manner consistent with applicable environmental laws and regulations or the national practice at the time of burial. It does not include sites where munitions were intentionally covered with earth during authorized destruction by detonation, or where in-situ capping is implemented as an engineered remedy under an authorized response action.
Minimum Separation Distance (MSD). MSD is the distance at which personnel in the open must be from an intentional or unintentional detonation.
Munition with the Greatest Fragmentation Distance (MGFD). The munition with the greatest fragment distance that is reasonably expected (based on research or characterization) to be encountered in any particular area.
Munitions and Explosives of Concern (MEC). This term, which distinguishes specific categories of military munitions that may pose unique explosives safety risks means: (A) Unexploded ordnance (UXO), as defined in 10 U.S.C. 101(e)(5); (B) Discarded military munitions (DMM), as defined in 10 U.S.C. 2710(e)(2); or (C) Munitions constituents (e.g., TNT, RDX), as defined in 10 U.S.C. 2710(e)(3), present in high enough concentrations to pose an explosive hazard.
Munitions Constituents (MC). Any materials originating from unexploded ordnance (UXO), discarded military munitions (DMM), or other military munitions, including explosive and non-explosive materials, and emission, degradation, or breakdown elements of such ordnance or munitions. (10 U.S.C. 2710(e)(3)).
Munitions Debris. Remnants of munitions (e.g., fragments, penetrators, projectiles, shell casings, links, fins) remaining after munitions use, demilitarization, or disposal.
Munitions Response. Response actions, including investigation, removal actions and remedial actions to address the explosives safety, human health, or environmental risks presented by unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC), or to support a determination that no removal or remedial action is required.
Munitions Response Area (MRA). Any area on a defense site that is known or suspected to contain UXO, DMM, or MC. Examples include former ranges and munitions burial areas. A munitions response area is comprised of one or more munitions response sites.
Munitions Response Site (MRS). A discrete location within an MRA that is known to require a munitions response.
Mutual Agreement. A meeting of the minds on a specific subject, and a manifestation of intent of the parties to do or refrain from doing some specific act or acts. Inherent in any mutual agreement or collaborative process are the acknowledgement of each member's role in the process and their differing views of their authorities. The mutual agreement process will provide a means of resolving differences without denying the parties an opportunity to exercise their respective authorities should mutual agreement fail to be achieved.
One Percent Lethality Distance. A distance calculated from a given CA Maximum Credible Event (MCE) and meteorological conditions (temperature, wind speed, Pasquill stability factor) and established as the distance at which dosage from that MCE agent release would be 150 mg-min/m^3 for H and HD agents, 75 mg-min/m^3 for HT agent, 150 mg-min/m^3 for Lewisite, 10 mg-min/m^3 for GB agent, 4.3 mg-min/m^3 for VX vapor, and 0.1 mg-min/m^3 for inhalation and deposition of liquid VX.

On-call Construction Support. Construction support provided, on an as needed basis, where the probability of encountering UXO, other munitions that may have experienced abnormal environments (e.g., DMM), munitions constituents in high enough concentrations to pose an explosive hazard, or CA, regardless of configuration, has been determined to be low. This support can respond from off-site when called, or be on-site and available to provide required construction support.
On-site Construction Support. Dedicated construction support, where the probability of encountering UXO, other munitions that may have experienced abnormal environments (e.g., DMM), munitions constituents in high enough concentrations to pose an explosive hazard, or CA, regardless of configuration, has been determined to be moderate to high.
On-the-Surface. A situation in which UXO, DMM or CA, regardless of configuration, are: (A) entirely or partially exposed above the ground surface (i.e., the top of the soil layer); or (B) entirely or partially exposed above the surface of a water body (e.g., because of tidal activity).
Open Burn (OB). An open-air combustion process by which excess, unserviceable, or obsolete munitions are destroyed to eliminate their inherent explosive hazards.
Open Detonation (OD). An open-air process used for the treatment of excess, unserviceable or obsolete munitions whereby an explosive donor charge initiates the munitions being treated.
Operational Range. A range that is under the jurisdiction, custody, or control of the Secretary of Defense and that is used for range activities; or although not currently being used for range activities, that is still considered by the Secretary to be a range and has not been put to a new use that is incompatible with range activities. (10 U.S.C. 101(e)(3)(A) and (B)). Also includes "military range," "active range," and "inactive range" as those terms are defined in 40 CFR §266.201.
Primary Explosives. Primary explosives are highly sensitive compounds that are typically used in detonators and primers. A reaction is easily triggered by heat, spark, impact or friction. Examples of primary explosives are lead azide and mercury fulminate.
Public Access Exclusion Distance (PAED). The PAED is defined as longest distance of the hazardous fragment distance, inhabited building distance (IBD) for overpressure, or the One Percent Lethality Distance. For siting purposes, the PAED is analogous to the IBD for explosives; therefore, personnel not directly associated with the chemical operations are not to be allowed within the PAED.
Qualified Receiver. Entities that have personnel who are, or individuals who are, trained and experienced in the identification and safe handling of used and unused military munitions, and any known or potential explosive hazards that may be associated with the MPPEH they receive; and are licensed and permitted or otherwise qualified to receive, manage, and process MPPEH.
Range. A designated land or water area that is set aside, managed, and used for range activities of the Department of Defense. The term includes firing lines and positions, maneuver areas, firing lanes, test pads, detonation pads, impact areas, electronic scoring sites, buffer zones with restricted access, and exclusionary areas. The term also includes airspace areas designated for military use in accordance with regulations and procedures prescribed by the Administrator of the Federal Aviation Administration. (10 U.S.C. 101(e)(1)(A) and (B))
Range activities. Research, development, testing, and evaluation of military munitions, other ordnance, and weapons systems; and the training of members of the armed forces in the use and handling of military munitions, other ordnance, and weapons systems. (10 U.S.C. 101(e)(2)(A) and (B))
Range Clearance. The destruction, or removal and proper disposition of used military munitions (e.g., unexploded ordnance (UXO) and munitions debris) and other range-related debris (e.g., target debris, military munitions packaging and crating material) to maintain or enhance operational range safety or prevent the accumulation of such material from impairing or preventing operational range use. "Range clearance" does not include removal, treatment, or remediation of chemical residues or munitions constituents from environmental media, nor actions to address discarded military munitions (e.g., burial pits) on operational ranges.
Range-Related Debris. Debris, other than munitions debris, collected from operational ranges or from former ranges (e.g., target debris, military munitions packaging and crating material).
Recovered Chemical Warfare Material (RCWM). CWM used for its intended purpose or previously disposed of as waste, which has been discovered during a CWM response or by chance (e.g., accidental discovery by a member of the public), that DoD has either secured in place or placed under DoD control, normally in a DDESB-approved storage location or interim holding facility, pending final disposition.

Render Safe Procedures (RSP). The portion of EOD procedures that involves the application of special disposal methods or tools to interrupt the functioning or otherwise defeat the firing train of UXO from triggering an unacceptable detonation.
Secondary Explosives. Secondary explosives are generally less sensitive to initiation than primary explosives and are typically used in booster and main charge applications. A severe shock is usually required to trigger a reaction. Examples are TNT, cyclo-1,3,5-trimethylene-2,4,6-trinitramine (RDX or cyclonite), HMX, and tetryl.
Small Arms Ammunition. Ammunition, without projectiles that contain explosives (other than tracers), that is .50 caliber or smaller, or for shotguns.
Team Separation Distance (TSD). The distance that munitions response teams must be separated from each other during munitions response activities involving intrusive operations.
Technical Escort Unit (TEU). A DoD organization manned with specially trained personnel that provide verification, sampling, detection, mitigation, render safe, decontamination, packaging, escort and remediation of chemical, biological and industrial devices or hazardous material.
Technology-aided Surface Removal. A removal of UXO, DMM or CWM on the surface (i.e., the top of the soil layer) only, in which the detection process is primarily performed visually, but is augmented by technology aids (e.g., hand-held magnetometers or metal detectors) because vegetation, the weathering of UXO, DMM or CWM, or other factors make visual detection difficult.
Time Critical Removal Action (TCRA). Removal actions where, based on the site evaluation, a determination is made that a removal is appropriate, and that less than 6 months exists before on-site removal activity must begin. (40 CFR 300.5)
Unexploded Ordnance (UXO). Military munitions that (A) have been primed, fuzed, armed, or otherwise prepared for action; (B) have been fired, dropped, launched, projected, or placed in such a manner as to constitute a hazard to operations, installations, personnel, or material; and (C) remain unexploded whether by malfunction, design, or any other cause. (10 U.S.C. 101(e)(5)(A) through (C)))
UXO Technicians. Personnel who are qualified for and filling Department of Labor, Service Contract Act, Directory of Occupations, contractor positions of UXO Technician I, UXO Technician II, and UXO Technician III.
UXO-Qualified Personnel. Personnel who have performed successfully in military EOD positions, or are qualified to perform in the following Department of Labor, Service Contract Act, Directory of Occupations, contractor positions: UXO Technician II, UXO Technician III, UXO Safety Officer, UXO Quality Control Specialist, or Senior UXO Supervisor.
Venting. Exposing any internal cavities of MPPEH, to include training or practice munitions (e.g., concrete bombs), using DDESB- or DoD Component-approved procedures, to confirm that an explosive hazard is not present.

Military Munitions-Related Terms (1)
How do they apply to specific types of material?

Type of Material (These are only examples.)	What is it **BEFORE** it is inspected for explosives hazards? (2) What is it **BEFORE** it is inspected? (16)		What is it **AFTER** it is inspected for explosive hazards?					
			If it presents an explosive hazards?			If it does not present an explosive hazards?		
	MPPEH	Other	MEC			MC (5)	Munitions Debris	Other
			UXO	DMM (3)	MC (4)			
Used military munition, on a range, fired	X		X				X	
Unused military munition, on a range, apparently discarded	X			X			X	
Used military munition, in a burial pit, on an operational range or on former ranges	X		X (6)				X	
Unused military munition, in a burial pit on an operational range or on former ranges	X			X (6)			X	
Explosives in the soil	X				X (7)	X		
Refrigerator, nails, soft drink cans, old fence wire, etc.		(8)	NA	NA	NA			(8)
Used cartridge cases, from a range, with live unused munitions possibly mixed in	X			X			(9)	
Target from a range (other than small arms range)	X		(10)	(10)	(10)			(11)
Remnants of munitions from an operational range or former range	X		X (12)	X (12)	X (12)		X (13)	
Kicked out military munition from a former open burn or open detonation ground	X			X (14)			X	
Residual MC in a melt kettle of a former (closed) explosive cast loading building	X		(15)	(15)	X (15)	X		X (16)
Residual MC in a floor drain pipe from an explosives-laden wash water drain of a former (closed) explosives cast loading facility.	X		(15)	(15)	X (15)			X (16)
Residual MC in cracks in floor slab (and in soil underneath floor cracks) in a former explosives manufacturing building	X		(15)	(15)	X (15)	X		X (16)
Small arms bullets or lead particulates n the soil from small arms use at a former small arms range used only for firing small arms ammunition		X (17)	Not Applicable (17)			X		

Note: The examples in this table are not all inclusive. The numbers in the table refer to footnotes that are found on the next page. It is important to read the footnotes, as they provide additional information of importance to understanding.

Enclosure 2

Endnotes:

(1) DoD has been working to standardize terms related to military munitions.

(2) Before material that is considered MPPEH can be either transferred within or released from DoD, its explosives safety status must be determined (see definition--Documentation of the Explosives Safety Status of Material). The type material involved determines the type of inspection (e.g., visual examination, chemical analysis, X-ray) required. Personnel qualified to determine the status of the particular material being examined must perform required inspections. For example, EOD and UXO-qualified personnel may inspect UXO and DMM during a munitions response or during range clearance activities. A QASAS or certified Wage Grade ammunition operator may inspect steamed-out projectiles at a depot's steam-out operation. A laboratory technician may perform a chemical analysis of soil to determine the percent explosives in the soil.

(3) Munitions generally considered as DMM include: buried munitions; un-recovered kick outs from open detonations; munitions left behind or discarded accidentally during munitions-related activities; munitions intentionally disposed of without authorization during munitions-related activities. Munitions removed from storage for the purpose of disposal that are awaiting disposal are not DMM.

(4) This is MC that is both (a) an explosive; and (b) present in sufficient concentrations to present explosive hazards.

(5) This is MC that is either (a) not an explosive (e.g., lead, beryllium, and cadmium); or (b) an explosive not present in sufficient concentrations to present explosive hazards.

(6) Although military munitions in a burial pit will normally be DMM, some may be UXO. For explosives safety reasons, munitions in a burial pit should be approached as UXO until assessed by technically qualified personnel (e.g., EOD personnel, UXO-qualified personnel) and determined that they are not UXO or that they do not present explosive hazards similar to UXO.

(7) Explosive soil is typically found in sumps and settling lagoons for explosives-laden wastewater, and in and around drainage ditches and pipes that carry the wastewater to such sumps and lagoons.

(8) These items are cultural debris.

(9) After determination of their explosives safety status, used cartridge cases documented as safe would, after any demilitarization required to remove their military characteristics, be available for release from DoD. In addition to these DoD requirements, other regulatory criteria may apply.

(10) A target is a type of range-related debris. Although a target is not MEC, it may contain UXO, DMM, or MC. Prior to its release from DoD control, its explosives safety status must be documented.

(11) A target's explosives safety status must be documented and any demilitarization required to remove its military characteristics must be performed prior to its release from DoD control.
(12) UXO, DMM, or MC may be found on operationalranges and on former ranges (previously referred to as closed, transferring or transferred ranges). An inspection of the material will determine into which category this material falls. For example, if a projectile breaks apart on impact, one could find (a) a sheared-off fuze, which would be UXO or (b) explosive filler, which would be MC, that broke away from the projectile's open body. If during an open detonation of an unserviceable munition that is conducted on an operational range, the donor charge detonates, but the munition being destroyed breaks up, but does not detonate, the remnants of the munition would be DMM or, if explosive residue (e.g., clumps of TNT), MC.
(13) After determination of its explosives safety status, scrap metal from used munitions on a range that is documented as safe would, after any demilitarization required to remove its military characteristics, be available for release from DoD control. In additions to these DoD requirements, other regulatory criteria may apply.
(14) Prudent safety practice is to consider kick outs, which have experienced an unknown environment, to be equally dangerous and managed like UXO until technically qualified personnel assess and determine that they are not UXO or do not present explosive hazards similar to UXO.
(15) Of itself, such material (e.g., mettle kettle, drainpipes, floor slabs) do not present an explosive hazard and would not be classified as UXO, DMM or MC. However, residual MC (e.g., TNT, RDX, HMX) could remain in such material in high enough concentrations to present an explosive hazard.
(16) After determination of its explosives safety status, such material (e.g., mettle kettle, drainpipes, floor slabs) when documented as safe would be available for release from DoD control. In addition to this DoD requirement, other regulatory criteria may apply.
(17) At operational ranges or former ranges used exclusively for live fire of small arms ammunition, some unfired small arms ammunition may be found. Although this ammunition is considered DMM and would be MPPEH, it is not considered to present a significant explosive hazard.
